All information in this Owner's Manual is current at the time of publication. However, HYUNDAI reserves the right to make changes at any time so that our policy of continual product improvement may be carried out.

This manual applies to all of this vehicle and includes descriptions and explanations of optional as well as standard equipment. As a result, you may find material in this manual that does not apply to your specific vehicle.
CAUTION: MODIFICATIONS TO YOUR HYUNDAI

Your HYUNDAI should not be modified in any way. Such modifications may adversely affect the performance, safety or durability of your HYUNDAI and may, in addition, violate conditions of the limited warranties covering the vehicle. Certain modifications may also be in violation of regulations established by the U.S. Department of Transportation and other federal or state agencies.

TWO-WAY RADIO OR CELLULAR TELEPHONE INSTALLATION

Your vehicle is equipped with electronic fuel injection and other electronic components. It is possible for an improperly installed/adjusted two-way radio or cellular telephone to adversely affect electronic systems. For this reason, we recommend that you carefully follow the radio manufacturer's instructions or consult your HYUNDAI dealer for precautionary measures or special instructions if you choose to install one of these devices.

SAFETY AND VEHICLE DAMAGE WARNING

This manual includes information titled as WARNING, CAUTION and NOTICE. These titles indicate the following:

⚠️ WARNING
This indicates that a condition may result in harm, serious injury or death to you or other persons if the warning is not heeded. Follow the advice provided with the warning.

⚠️ CAUTION
This indicates that a condition may result in damage to your vehicle or its equipment if the caution is not heeded. Follow the advice provided with the caution.

✴ NOTICE
This indicates that interesting or helpful information is being provided.
HYUNDAI VEHICLE OWNER PRIVACY POLICY

Your HYUNDAI vehicle may be equipped with technologies and services that use information collected, generated, recorded or stored by the vehicle. HYUNDAI has created a Vehicle Owner Privacy Policy to explain how these technologies and services collect use and share this information.

If you would like to receive a hard copy of our Vehicle Owner Privacy Policy, please contact our Customer Connect Center at:

Hyundai Motor America/Phoenix
P.O. Box 83835
Phoenix, AZ 85071-3835
800-633-5151
consumeraffairs@hmausa.com

HYUNDAI's Customer Connect Center representatives are available Monday through Friday, between the hours of 5:00 AM and 7:00 PM PST and Saturday and Sunday between 6:30 AM and 3:00 PM PST (English).
For Customer Connect Center assistance in Spanish or Korean, representatives are available Monday through Friday between 6:30 AM and 3:00 PM PST.
FOREWORD

Thank you for choosing HYUNDAI. We are pleased to welcome you to the growing number of discerning people who drive HYUNDAIs. The advanced engineering and high-quality construction of each HYUNDAI we build is something of which we're very proud.

Your Owner's Manual will introduce you to the features and operation of your new HYUNDAI. It is suggested that you read it carefully because the information it contains can contribute greatly to the satisfaction you receive from your new car.

The manufacturer also recommends that all service and maintenance on your car be performed by an authorized HYUNDAI dealer. HYUNDAI dealers are prepared to provide high-quality service, maintenance and any other assistance that may be required.

HYUNDAI MOTOR AMERICA

Note: Because future owners will also need the information included in this manual, if you sell this HYUNDAI, please leave the manual in the vehicle for their use. Thank you.

⚠️ CAUTION

*Severe engine and transaxle damage may result from the use of poor quality fuels and lubricants that do not meet HYUNDAI specifications. You must always use high quality fuels and lubricants that meet the specifications listed on Page 8-6 and 8-7 in the Vehicle Specifications and consumer information section of the Owner's Manual.*

Guide to HYUNDAI Genuine Parts

1. What are HYUNDAI Genuine Parts?
   HYUNDAI Genuine Parts are the same parts used by HYUNDAI Motor Company to manufacture vehicles. They are designed and tested for the optimum safety, performance, and reliability to our customers.

2. Why should you use genuine parts?
   HYUNDAI Genuine Parts are engineered and built to meet rigid manufacturing requirements. Damage caused by using imitation, counterfeit or used salvage parts is not covered under the HYUNDAI New Vehicle Limited Warranty or any other HYUNDAI warranty.

   In addition, any damage to or failure of HYUNDAI Genuine Parts caused by the installation or failure of an imitation, counterfeit or used salvage part is not covered by any HYUNDAI Warranty.

3. How can you tell if you are purchasing HYUNDAI Genuine Parts?
   Look for the HYUNDAI Genuine Parts Logo on the package (see below).
   HYUNDAI Genuine Parts for export are packaged with labels written only in English.
   HYUNDAI Genuine Parts are only sold through authorized HYUNDAI Dealerships.

Introduction

HOW TO USE THIS MANUAL

We want to help you get the greatest possible driving experience from your vehicle. Your Owner’s Manual can assist you in many ways. We strongly recommend that you read the entire manual. In order to minimize the chance of death or injury, you must read the WARNING and CAUTION sections in the manual. Illustrations complement the text in this manual to best explain how to use your vehicle. By reading your manual, you will learn about features, important safety information, and driving tips under various road conditions. The general layout of the manual is provided in the Table of Contents. A good place to start is the index; it has an alphabetical listing of all information in your manual. Sections: This manual has eight sections plus an index. Each section begins with a brief list of contents so you can tell at a glance if that section has the information you want. You will find various WARNINGS, CAUTIONS, and NOTICES in this manual. These WARNINGS were prepared to enhance your personal safety. You should carefully read and follow ALL procedures and recommendations provided in these WARNINGS, CAUTIONS and NOTICES.

Symbols used in this manual

Warnings, Cautions and Notices

⚠️ WARNING
A WARNING indicates that a condition may result in harm, serious bodily injury or death if the warning is ignored.

⚠️ CAUTION
A CAUTION indicates that a condition may result in damage to your vehicle if the caution is ignored.

✴ NOTICE
A NOTICE indicates interesting or helpful information is being provided.

Safety symbol in illustrations

🚫 The symbol means to "Avoid" or "Do not do something".

FUEL REQUIREMENTS

Your new vehicle is designed to obtain maximum performance with UNLEADED FUEL, as well as minimize exhaust emissions and spark plug fouling.

Your new vehicle is designed to use only unleaded fuel having a pump octane number ((R+M)/2) of 87 (Research Octane Number 91) or higher. (Do not use methanol blended fuels.)

Never add any fuel system cleaning agents to the fuel tank other than what has been specified. (Consult an authorized HYUNDAI dealer for details.)

⚠️ WARNING - Refueling
- Do not "top off" after the nozzle automatically shuts off when refueling. Attempts to force more fuel into the tank can cause fuel overflow onto you and the ground causing a risk of fire.
- Always check that the fuel cap is installed securely to prevent fuel spillage in the event of an accident.
Gasoline containing alcohol or methanol
Gasohol, a mixture of gasoline and ethanol (also known as grain alcohol) are being marketed along with or instead of leaded or unleaded gasoline. For example, "E15" is a gasohol comprised of 15% ethanol and 85% gasoline. Do not use gasohol containing more than 15% ethanol, and do not use gasoline or gasohol containing any methanol. Either of these fuels may cause drivability problems and damage to the fuel system, engine control system and emission control system. Discontinue using gasohol of any kind if drivability problems occur.
"E85" fuel is an alternative fuel comprised of 85 percent ethanol and 15 percent gasoline, and is manufactured exclusively for use in Flexible Fuel Vehicles. "E85" is not compatible with your vehicle. Use of "E85" may result in poor engine performance and damage to your vehicle's engine and fuel system. HYUNDAI recommends that customers do not use fuel with an ethanol content exceeding 15 percent.

**NOTICE**
To prevent damage to your vehicle's engine and fuel system:
- Never use gasohol which contains methanol.
- Never use gasohol containing more than 15% ethanol.
- Never use leaded fuel or leaded gasohol.
- Never use "E85" fuel.
Your New Vehicle Limited Warranty does not cover damage to the fuel system or any performance problems caused by the use of "E85" fuel.

**Other fuels**
Using fuels such as;
- Silicone (Si) contained fuel, 
- Ferrocene (Fe) contained fuel, and 
- Other metallic additives contained fuels, 
may cause vehicle and engine damage or cause plugging, misfiring, poor acceleration, engine stalling, catalyst melting, abnormal corrosion, life cycle reduction, etc.
Also, the Malfunction Indicator Lamp (MIL) may illuminate.

**NOTICE**
Damage to the fuel system or performance problem caused by the use of these fuels may not be covered by your New Vehicle Limited Warranty.
**Gasoline containing MMT**

Some gasoline contains harmful manganese-based fuel additives such as MMT (Methylcyclopentadienyl Manganese Tricarbonyl). HYUNDAI does not recommend the use of gasoline containing MMT. This type of fuel can reduce vehicle performance and affect your emission control system. The malfunction indicator lamp on the cluster may come on.

**Do not use methanol**

Fuels containing methanol (wood alcohol) should not be used in your vehicle. This type of fuel can reduce vehicle performance and damage components of the fuel system, engine control system and emission control system.

* NOTICE

Your New Vehicle Limited Warranty may not cover damage to the fuel system and any performance problems that are caused by the use of fuels containing methanol.

**Fuel Additives**

HYUNDAI recommends that you use good quality gasolines treated with detergent additives such as TOP TIER Detergent Gasoline, which help prevent deposit formation in the engine. These gasolines will help the engine run cleaner and enhance performance of the Emission Control System. For more information on TOP TIER Detergent Gasoline, please go to the website (www.top-tiergas.com)

For customers who do not use TOP Tier Detergent Gasoline regularly, and have problems starting their vehicle or the engine does not run smoothly, additives that you can buy separately may be added to the gasoline.

If TOP TIER Detergent Gasoline is not available, one bottle of additive added to the fuel tank at every 7,500 mile or every engine oil change is recommended. Additives are available from your authorized HYUNDAI dealer along with information on how to use them. Do not mix other additives.
Operation in foreign countries
If you are going to drive your vehicle in another state, be sure to:

• Observe all regulations regarding registration and insurance.
• Determine that acceptable fuel is available.
VEHICLE BREAK-IN PROCESS

No special break-in period is needed. By following a few simple precautions for the first 600 miles (1,000 km) you may add to the performance, economy and life of your vehicle.

- Do not race the engine.
- While driving, keep your engine speed (rpm, or revolutions per minute) between 2,000 rpm and 4,000 rpm.
- Do not maintain a single vehicle speed for long periods of time, either fast or slow. Varying the engine speed is needed to properly break-in the engine.
- Avoid hard stops, except in emergencies, to allow the brakes to seat properly.

CALIFORNIA PROPOSITION 65 WARNING

Items contained in motor vehicles or emitted from them are known to the State of California to cause cancer and birth defects or reproductive harm. These include:
- Gasoline and its vapors
- Engine exhaust
- Used engine oil
- Interior passenger compartment components and materials
- Component parts which are subject to heat and wear

In addition, battery posts, terminals and related accessories contain lead, lead compounds and other chemicals known to the State of California to cause cancer and reproductive harm.

VEHICLE HANDLING INSTRUCTIONS

As with other vehicles of this type, failure to operate this vehicle correctly may result in loss of control, an accident or vehicle rollover. Specific design characteristics (higher ground clearance, track, etc.) give this vehicle a higher center of gravity than other types of vehicles. It is not designed for cornering at the same speeds as a conventional 2-wheel drive sedans or sports coupe. Avoid sharp turns or abrupt maneuvers. Failure to operate this vehicle correctly may result in loss of control, an accident or vehicle rollover. Be sure to read the “Reducing the risk of a rollover” driving guidelines, in section 5 of this manual.
This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating;
- Whether or not the driver and passenger safety belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur. NOTE: EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age, and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.

Safety features of your vehicle

**IMPORTANT SAFETY PRECAUTIONS**

You will find many safety precautions and recommendations throughout this section, and throughout this manual. The safety precautions in this section are among the most important.

**Always Wear Your Seat Belt**

A seat belt is your best protection in all types of accidents. Air bags are designed to supplement seat belts, not replace them. So even though your vehicle is equipped with air bags, ALWAYS make sure you and your passengers wear your seat belts, and wear them properly.

**Restrain All Children**

All children under age 13 should ride in your vehicle properly restrained in a rear seat, not the front seat. Infants and small children should be restrained in an appropriate child restraint. Larger children should use a booster seat with the lap/shoulder belt until they can use the seat belt properly without a booster seat.

**Air Bag Hazards**

While air bags can save lives, they can also cause serious or fatal injuries to occupants who sit too close to them, or who are not properly restrained. Infants, young children, and shorter adults are at the greatest risk of being injured by an inflating air bag. Follow all instructions and warnings in this manual.

**Driver Distraction**

Driver distraction presents a serious and potentially deadly danger, especially for inexperienced drivers. Safety should be the first concern when behind the wheel and drivers need to be aware of the wide array of potential distractions, such as drowsiness, reaching for objects, eating, personal grooming, other passengers, and using cellular phones.

Drivers can become distracted when they take their eyes and attention off the road or their hands off the wheel to focus on activities other than driving. To reduce your risk of distraction or getting into an accident:
• ALWAYS set up your mobile devices (i.e., MP3 players, phones, navigation units, etc.) when your vehicle is parked or safely stopped.
• ONLY use your mobile device when allowed by laws and when conditions permit safe use. NEVER text or email while driving. Most states have laws prohibiting drivers from texting. Some states and cities also prohibit drivers from using handheld phones.
• NEVER let the use of a mobile device distract you from driving. You have a responsibility to your passengers and others on the road to always drive safely, with your hands on the wheel as well as your eyes and attention on the road.

Control Your Speed
Excessive speed is a major factor in crash injuries and deaths. Generally, the higher the speed, the greater the risk, but serious injuries can also occur at lower speeds. Never drive faster than is safe for current conditions, regardless of the maximum speed posted.

Keep Your Vehicle in Safe Condition
Having a tire blowout or a mechanical failure can be extremely hazardous. To reduce the possibility of such problems, check your tire pressures and condition frequently, and perform all regularly scheduled maintenance.

(10) Armrest
(11) Seat warmer*

* if equipped

* The actual feature in the vehicle may differ from the illustration.
**WARNING - Loose objects**
Loose objects in the driver's foot area could interfere with the operation of the foot pedals, possibly causing an accident. Do not place anything under the front seats.

**WARNING - Driver responsibility for passengers**
Riding in a vehicle with the seatback reclined could lead to serious or fatal injury in an accident. If a seat is reclined during an accident, the occupant's hips may slide under the lap portion of the seat belt, applying great force to the unprotected abdomen. Serious or fatal internal injuries could result. The driver must advise the passenger to keep the seatback in an upright position whenever the vehicle is in motion.

**WARNING - Uprighting seat**
When you return the seatback to its upright position, hold the seatback and return it slowly and be sure there are no other occupants around the seat. If the seatback is returned without being held and controlled, the back of the seat could spring forward resulting in accidental injury to a person struck by the seatback.

**WARNING**
Occupants should never sit on seat cushions. The passenger's hips may slide under the lap portion of the seat belt during an accident or a sudden stop. Serious or fatal internal injuries could result because the seat belt cannot operate normally.

**WARNING - Driver's seat**
To avoid serious injury or death:
- Never attempt to adjust the seat while the vehicle is moving. This could result in loss of control, and an accident causing death, serious injury, or property damage.
- Do not allow anything to interfere with the normal position of the seatback. Storing items against a seatback or in any other way interfering with proper locking of a seatback could result in serious or fatal injury in a sudden stop or collision.
- In order to avoid unnecessary and perhaps severe air bag injuries, always sit as far back as possible from the steering wheel while maintaining comfortable control of the vehicle. We recommend that your chest be at least 10 inches (250 mm) away from the steering wheel.
Safety features of your vehicle

**WARNING - Rear seatbacks**
- The rear seatback must be securely latched. If not, passengers and objects could be thrown forward resulting in serious injury or death in the event of a sudden stop or collision.
- No passenger should ride in the cargo area or sit or lie on folded seatbacks while the vehicle is moving. All passengers must be properly seated in seats and restrained properly while riding.
- When resetting the seatback to the upright position, make sure it is securely latched by pushing it forward and rearwards.
- To avoid the possibility of burns, do not remove the carpet in the cargo area. Emission control devices beneath this floor generate high temperatures.

(Continued)

**WARNING**
- Luggage and other cargo should be laid flat in the cargo area or on the folded rear seatback. If objects are large, heavy, or must be piled, they must be secured. Under no circumstances should cargo be piled higher than the seatbacks. Failure to follow these warnings could result in serious injury or death in the event of a sudden stop, collision or rollover.

(Continued)

**WARNING**
- Do not adjust the seat while wearing seat belts. Moving the seat cushion forward may cause strong pressure on the abdomen.
- Use extreme caution so that hands or other objects are not caught in the seat mechanisms while the seat is moving.
- Do not place a cigarette lighter on the floor or seat. When you operate the seat, gas may exit out of the lighter and cause a fire.
- Use extreme caution when picking small objects trapped under the seats or between the seat and the center console. Your hands might be cut or injured by the sharp edges of the seats mechanism.
Front seat adjustment - Manual (if equipped)

Forward and rearward

To move the seat forward or rearward:
1. Pull the seat slide adjustment lever up and hold it.
2. Slide the seat to the position you desire.
3. Release the lever and make sure the seat is locked in place.

Adjust the seat before driving, and make sure the seat is locked securely by trying to move forward and rearward without using the lever. If the seat moves, it is not locked properly.

Seatback angle

To recline the seatback:
1. Lean forward slightly and lift up the seatback recline lever.
2. Carefully lean back on the seat and adjust the seatback of the seat to the position you desire.
3. Release the lever and make sure the seatback is locked in place. (The lever MUST return to its original position for the seatback to lock.)

Seat cushion height (for driver's seat, if equipped)

To change the height of the seat cushion, push the lever upwards or downwards.
- To lower the seat cushion, push the lever down several times.
- To raise the seat cushion, pull the lever up several times.
Safety features of your vehicle

Lumbar support (for driver's seat)

1. Press the front portion of the switch to increase support or the rear portion of the switch to decrease support.
2. Release the switch once it reaches the desired position.

Front seat adjustment - Power (if equipped)

The front seat can be adjusted by using the control knobs located on the outside of the seat cushion. Before driving, adjust the seat to the proper position so as to easily control the steering wheel, pedals and switches on the instrument panel.

⚠️ CAUTION

- The power seat is driven by an electric motor. Stop operating once the adjustment is completed. Excessive operation may damage the electrical equipment.
- When in operation, the power seat consumes a large amount of electrical power. To prevent unnecessary battery drain, don’t adjust the power seat longer than necessary while the engine is not running.
- Do not operate two or more power seat control knobs at the same time. Doing so may result in power seat motor or electrical component malfunction.

⚠️ WARNING

The power seat is operable with the ignition OFF. Therefore, children should never be left unattended in the vehicle.
**Forward and backward**

1. Push the control switch forward or backward to move the seat to the desired position.
2. Release the switch once the seat reaches the desired position.

**Seatback angle**

1. Push the control switch forward or backward to move the seatback to the desired angle.
2. Release the switch once the seat reaches the desired position.

**Seat cushion height (if equipped)**

1. Pull the front portion of the control switch up to raise or down to lower the front part of the seat cushion. Pull the rear portion of the control switch up to raise or down to lower the rear part of the seat cushion.
2. Release the switch once the seat reaches the desired position.
**Lumbar support**  
(for driver's seat, if equipped)

The lumbar support can be adjusted by pressing the switch.

1. Press the front portion (1) of the switch to increase support, or the rear portion (2) of the switch, to decrease support.
2. Release the switch once it reaches the desired position.
3. Press the upper portion (3) of the switch to move the support position up, or press the lower portion (4) of the switch, to move the support position down.
4. Release the switch once it reaches the desired position.

**Headrest**

The driver's and front passenger's seats are equipped with a headrest for the occupant's safety and comfort. The headrest not only provides comfort for the driver and front passenger, but also helps to protect the head and neck in the event of a collision.

**WARNING - Headrest adjustment**

- For maximum effectiveness in case of an accident, the headrest should be adjusted so the middle of the headrest is at the same height as the center of gravity of an occupant's head. Generally, the center of gravity of most people's head is similar with the height of the top of their eyes. Also adjust the headrest as close to your head as possible. For this reason, the use of a cushion that holds the body away from the seatback is not recommended.
- Do not operate the vehicle with the headrests removed. Severe injury to an occupant may occur in the event of an accident. Headrests may provide protection against severe neck injuries when properly adjusted.
- Do not adjust the headrest position of the driver's seat while the vehicle is in motion.
Forward and backward adjustment
The headrest may be adjusted forward to 4 different positions by pulling the headrest forward to the desired detent. To adjust the headrest to the backwards position, press and hold the release button (1), and adjust position of the headrest. Adjust the headrest so that it properly supports the head and neck.

Adjusting the height up and down
To raise the headrest:
1. Pull it up to the desired position (1).

To lower the headrest:
1. Push and hold the release button (2) on the headrest support
2. Lower the headrest to the desired position (3).

⚠️ CAUTION
If you recline the seatback towards the front with the headrest and seat cushion raised, the headrest may come in contact with the sunvisor or other parts of the vehicle.
Safety features of your vehicle

Removal/Reinstallation
To remove the headrest:
1. Raise it as far as it can go then press the release button using a simple tool (1) while pulling the headrest up (2).

To reinstall the headrest:
1. Put the headrest poles (3) into the holes.
2. Adjust it to the appropriate height.

Seat warmer (if equipped)

With the ignition switch in the ON position, push either of the switches to warm the driver's seat or the front passenger's seat.

During mild weather or under conditions where the operation of the seat warmer is not needed, keep the switches in the OFF position.

- Each time you push the button, the temperature setting of the seat is changed as follows:
  
  OFF → HIGH → MIDDLE → LOW

- The seat warmer defaults to the OFF position whenever the ignition switch is turned on.
- With the seat warmer switch in the ON position, the heating system in the seat turns off or on automatically depending on the seat temperature.

The seat warmer is provided to warm the front seats during cold weather.
Safety features of your vehicle

**Air ventilation seat (if equipped)**

The Air ventilation seat is provided to cool the front seats during hot weather by blowing air through small vent holes on the surface of the seats. While the engine is running, press the cooling portion (blue color) of the switch to cool the driver's seat or the front passenger's seat.

When the operation of the seat cooler is not needed, keep the switches in the OFF position.

---

**WARNING**

The seat warmers can cause a SERIOUS BURN, even at low temperatures and especially if used for long periods of time. Passengers must be able to feel if the seat is becoming too warm so they can turn it off, if needed.

People who cannot detect temperature change or pain to the skin should use extreme caution, especially the following types of passengers:

- Infants, children, elderly or disabled persons, or hospital outpatients.
- People with sensitive skin or who burn easily.
- Fatigued individuals.
- Intoxicated individuals.
- People taking medication that can cause drowsiness or sleepiness.

**CAUTION**

To prevent damage to the seat warmers and seats:

- Never use a solvent such as paint thinner, benzene, alcohol or gasoline to clean the seats.
- Do not place heavy or sharp objects on seats equipped with seat warmers.
- Do not change the seat cover. It may damage the seat warmer.

---

**WARNING**

NEVER place anything on the seat that insulates against heat when the seat warmer is in operation, such as a blanket or seat cushion. This may cause the seat warmer to overheat, causing a burn or damage to the seat.

WARNING

The seat warmers can cause a SERIOUS BURN, even at low temperatures and especially if used for long periods of time. Passengers must be able to feel if the seat is becoming too warm so they can turn it off, if needed.

People who cannot detect temperature change or pain to the skin should use extreme caution, especially the following types of passengers:

- Infants, children, elderly or disabled persons, or hospital outpatients.
- People with sensitive skin or who burn easily.
- Fatigued individuals.
- Intoxicated individuals.
- People taking medication that can cause drowsiness or sleepiness.

**WARNING**

NEVER place anything on the seat that insulates against heat when the seat warmer is in operation, such as a blanket or seat cushion. This may cause the seat warmer to overheat, causing a burn or damage to the seat.

**CAUTION**

To prevent damage to the seat warmers and seats:

- Never use a solvent such as paint thinner, benzene, alcohol or gasoline to clean the seats.
- Do not place heavy or sharp objects on seats equipped with seat warmers.
- Do not change the seat cover. It may damage the seat warmer.

The Air ventilation seat is provided to cool the front seats during hot weather by blowing air through small vent holes on the surface of the seats. While the engine is running, press the cooling portion (blue color) of the switch to cool the driver's seat or the front passenger's seat.

When the operation of the seat cooler is not needed, keep the switches in the OFF position.
• Each time you press the button, the airflow will change as follows:
  OFF → HIGH → MIDDLE → LOW

• The Air ventilation seat defaults to the OFF position whenever the ignition switch is turned on.

⚠️ CAUTION
To prevent damage to the air ventilation seat:
• Use the air ventilation seat ONLY when the climate control system is on. Using the air ventilation seat for prolonged periods of time with the climate control system off could cause the air ventilation seat to malfunction.

(Continued)
• Never use a solvent such as paint thinner, benzene, alcohol or gasoline to clean the seats.
• Avoid spilling liquids on the surface of the front seats and seatbacks; this may cause the air vent holes to become blocked and not work properly.
• Do not place materials such as plastic bags or newspapers under the seats. They may block the air intake causing the air vents to not work properly.
• Do not change the seat covers. It may damage the air ventilation seat.
• If the air vents do not operate, restart the vehicle. If there is no change, we recommend that you have your vehicle inspected by an authorized HYUNDAI dealer.

⚠️ WARNING - Seatback pockets
Do not put heavy or sharp objects in the seatback pocket. An occupant could contact such objects in a crash. Heavy objects in the front passenger seatback could also interfere with the occupant sensing system.
WARNING
For proper operation of the occupant classification system:
• Do not place any items cumulatively weighing over 2.2 lbs (1 kg) in the seatback pocket or on the seat.

Driver position memory system
(for power seat, if equipped)

A driver position memory system is provided to store and recall the driver seat and side view mirror position with a simple button operation. By saving the desired position into the system memory, different drivers can reposition the driver seat based upon their driving preference. If the battery is disconnected, the position memory will be erased and the driving position should be restored in the system.

WARNING
Never attempt to operate the driver position memory system while the vehicle is moving. This could result in loss of control, and an accident causing death, serious injury, or property damage.
Storing positions into memory using the buttons on the door

Storing driver’s seat positions
1. Shift the shift lever into P while the engine start/stop button is ON or ignition switch ON.
2. Adjust the driver’s seat and side view mirror to a position that is comfortable for the driver.
3. Press SET button on the control panel. The system will beep once.
4. Press one of the memory buttons (1 or 2) within 5 seconds after pressing the SET button. The system will beep twice when memory has been successfully stored.

Recalling positions from memory
The position in memory will be recalled when:
1. The shift lever is in P with one of the condition below:
   - The ignition switch in the ON position or engine running.
   - The ignition switch in the LOCK/OFF or ACC position while the driver’s door is opened.
2. Press the desired memory button (1 or 2). The system will beep once, then the driver’s seat will automatically adjust to the stored position.

Adjusting the control switch for the driver’s seat while the system is recalling the stored position will cause the movement to stop and move in the direction that the control switch is moved.

⚠️ WARNING
Use caution when recalling the adjustment memory while sitting in the vehicle. Push the seat position control switch to the desired position immediately if the seat moves too far in any direction.
**Easy access function**  
*(if equipped)*

The system will move the driver’s seat automatically as follows:

- **Without smart key system**
  - It will move the driver’s seat rearward when the ignition key is removed.
  - It will move the driver’s seat forward when the ignition key is inserted.

- **With smart key system**
  - It will move the driver’s seat rearward when the engine start/stop button is changed to the OFF position.
  - It will move the driver’s seat forward when the engine start/stop button is changed to the ACC or START position.

You can activate or deactivate this feature. Refer to “User settings” in section 4.

---

**Rear seat adjustment**

**Forward and backward** *(if equipped)*

To move the seat forward or backward:

1. Pull the seat slide adjustment lever up and hold it.
2. Slide the seat to the position you desire.
3. Release the lever and make sure the seat is locked in place.

Adjust the seat before driving, and make sure the seat is locked securely by trying to move forward and backward without using the lever. If the seat moves, it is not locked properly.

---

**Seatback angle**

To recline the seatback:

1. Pull up the seatback recline lever.
2. Hold the lever and adjust the seatback of the seat to the position you desire.
3. Release the lever and make sure the seatback is locked in place. *(The lever MUST return to its original position for the seatback to lock.)*
Headrest (for rear seat)

The rear seat(s) is equipped with headrests in all the seating positions for the occupant's safety and comfort.

The headrest not only provides comfort for passengers, but also helps to protect the head and neck in the event of a collision.

WARNING - Headrest adjustment

- For maximum effectiveness in case of an accident, the headrest should be adjusted so the middle of the headrest is at the same height as the center of gravity of an occupant's head.

Generally, the center of gravity of most people's head is similar with the height of the top of their eyes.

Also adjust the headrest as close to your head as possible. For this reason, the use of a cushion that holds the body away from the seatback is not recommended.

(Continued)

(Continued)

- Do not operate the vehicle with the headrests removed. Severe injury to an occupant may occur in the event of an accident. Headrests may provide protection against severe neck injuries when properly adjusted.

- Do not adjust the headrest height while the vehicle is in motion.
Safety features of your vehicle

Adjusting the height up and down
To raise the headrest:
1. Pull it up to the desired position (1).

To lower the headrest:
1. Push and hold the release button (2) on the headrest support
2. Lower the headrest to the desired position (3).

Removal/Reinstallation
To remove the headrest:
1. Raise it as far as it can go then press the release button (1) while pulling the headrest up (2).

To reinstall the headrest:
1. Put the headrest poles (3) into the holes while pressing the release button (1).
2. Adjust it to the appropriate height.

⚠️ WARNING
- Make sure the headrest locks in position after adjusting it to properly protect the occupants.
- After installing the headrest, make sure that it is installed in the right direction. A headrest installed reversely could increase whiplash injury during rear impact.
Safety features of your vehicle

**Armrest**
To use the armrest, pull it forward from the seatback.

**Seat warmer (if equipped)**

The seat warmer is provided to warm the rear seats during cold weather. With the ignition switch in the ON position, push either of the switches to warm rear seats.

During mild weather or under conditions where the operation of the seat warmer is not needed, keep the switches in the OFF position.

- Each time you push the button, the temperature setting of the seat is changed as follows:

  OFF → HIGH(●●) → LOW(●)

- The seat warmer defaults to the OFF position whenever the ignition switch is turned on.

- With the seat warmer switch in the ON position, the heating system in the seat turns off or on automatically depending on the seat temperature.
**WARNING**
The seat warmers can cause a SERIOUS BURN, even at low temperatures and especially if used for long periods of time. Passengers must be able to feel if the seat is becoming too warm so they can turn it off, if needed.
People who cannot detect temperature change or pain to the skin should use extreme caution, especially the following types of passengers:
- Infants, children, elderly or disabled persons, or hospital outpatients.
- People with sensitive skin or who burn easily.
- Fatigued individuals.
- Intoxicated individuals.
- People taking medication that can cause drowsiness or sleepiness.

**WARNING**
NEVER place anything on the seat that insulates against heat when the seat warmer is in operation, such as a blanket or seat cushion. This may cause the seat warmer to overheat, causing a burn or damage to the seat.

**CAUTION**
To prevent damage to the seat warmers and seats:
- Never use a solvent such as paint thinner, benzene, alcohol or gasoline to clean the seats.
- Do not place heavy or sharp objects on seats equipped with seat warmers.
- Do not change the seat cover. It may damage the seat warmer.
Folding the rear seat
The rear seatbacks can be folded to facilitate carrying long items or to increase the luggage capacity of the vehicle.

⚠️ WARNING
- Never allow passengers to sit on top of the folded down seatback while the vehicle is moving. This is not a proper seating position and no seat belts are available for use. This could result in serious injury or death in case of an accident or sudden stop.
- Objects carried on the folded down seatback should not extend higher than the top of the front seatbacks. Doing this could allow cargo to slide forward and cause injury or damage during sudden stops.

To fold down the rear seatback
1. Insert the rear seat belt buckle in the pocket between the rear seatback and cushion, and insert the rear seat belt webbing in the guide to prevent the seat belt from being damaged.
2. Set the front seatback to the upright position and if necessary, slide the front seat forward.
3. Lower the rear headrests to the lowest position.
4. Pull on the seatback folding lever, then fold the seat toward the front of the vehicle. When you return the seatback to its upright position, always be sure it has locked into position by pushing on the top of the seatback.
5. To use the rear seat, lift and pull the seatback backward by pulling on the folding lever.
   Pull the seatback firmly until it clicks into place.
   Make sure the seatback is locked in place.
6. Return the rear seat belt to the proper position.

**Rear seat folding from the liftgate (tailgate) area (if equipped)**

Pull the rear seat back folding lever out. The rear seat back will be folded.
If you pull the left side lever (1) out, left side seat back and center seat back will be folded.
If you pull the right side lever (2) out, right side seat back will be folded.

**WARNING - Rear seat folding**
Do not attempt to fold the rear seats if the seat is occupied with other passengers, pets, or luggage. Injury or damage to persons, pets, or luggage may occur.
To fold down the rear center seat-back

1. Lower the rear headrests to the lowest position.
2. Push the center seatback folding lever up, then fold the seat toward the front of the vehicle.

When you return the seatback to its upright position, always be sure it has locked into position by pushing on the top of the seatback.

**NOTICE**
If you are not able to pull out the seat belt from the retractor, firmly pull the belt out and release it. Then you will be able to pull the belt out smoothly.

**WARNING - Rear center seat folding**
The rear center seat back does not lock in place when folded down. When carrying long objects with the rear center seat back folded, make sure to secure the object to prevent it from being thrown about the vehicle in a collision. Failure to do so may cause injury to vehicle occupants.

**WARNING**
When you return the rear seatback to its upright position after being folded down:
Be careful not to damage the seat belt webbing or buckle. Do not allow the seat belt webbing or buckle to get caught or pinched in the rear seat.
Ensure that the seatback is completely locked into its upright position by pushing on the top of the seatback. Otherwise, in an accident or sudden stop, the seat could fold down and allow cargo to enter the passenger compartment, which could result in serious injury or death.
**WARNING - Uprighting seat**
When you return the seatback to its upright position, hold the seatback and return it slowly. If the seatback is returned without holding it, the back of the seat could spring forward resulting in injury caused by being struck by the seatback.

**WARNING - Cargo**
Cargo should always be secured to prevent it from being thrown about the vehicle in a collision and causing injury to the vehicle occupants. Special care of objects should be taken when placing them in the rear seats, since those may hit the front seat occupants in a frontal collision.

**WARNING - Cargo loading**
Make sure the engine is off, the automatic transaxle is in P (Park) and the parking brake is securely applied whenever loading or unloading cargo. Failure to take these steps may allow the vehicle to move if the shift lever is inadvertently moved to another position.

**CAUTION - Rear seat belts**
When returning the rear seatbacks to the upright position, remember to return the rear shoulder belts to their proper position.
SEAT BELTS

Seat belt restraint system

⚠️ WARNING

- For maximum restraint system protection, the seat belts must always be used whenever the car is moving.
- Seat belts are most effective when seatbacks are in the upright position.
- Children age 12 and younger must always be properly restrained in the rear seat. Never allow children to ride in the front passenger seat. If a child over 12 must be seated in the front seat, he/she must be properly belted and the seat should be moved as far back as possible.

(Continued)

- Never wear the shoulder belt under your arm or behind your back. An improperly positioned shoulder belt can cause serious injuries in a crash. The shoulder belt should be positioned midway over your shoulder across your collarbone.
- Always wear both the shoulder portion and lap portion of the lap/shoulder belt.
- Avoid wearing twisted seat belts. A twisted belt can't do its job as well. In a collision, it could even cut into you. Be sure the belt webbing is straight and not twisted.
- Be careful not to damage the belt webbing or hardware. If the belt webbing or hardware is damaged, replace it.

⚠️ WARNING

- Seat belts are designed to bear upon the bony structure of the body, and should be worn low across the front of the pelvis, chest and shoulders, as applicable; wearing the lap section of the belt across the abdominal area must be avoided. Seat belts should be adjusted as firmly as possible, consistent with comfort, to provide the protection for which they have been designed.
- A slack belt will greatly reduce the protection afforded to the occupant.

(Continued)
Safety features of your vehicle

(Continued)
Care should be taken to avoid contamination of the webbing with polishes, oils and chemicals and particularly battery acid. Cleaning may safely be carried out using mild soap and water. The belt should be replaced if webbing becomes frayed, contaminated or damaged. It is essential to replace the entire assembly after it has been worn in a severe impact even if damage to the assembly is not obvious. Belts should not be worn with straps twisted. Each seat belt assembly must only be used by one occupant; it is dangerous to put a belt around a child being carried on the occupant's lap.

⚠️ WARNING
- No modifications or additions should be made by the user which will either prevent the seat belt adjusting devices from operating to remove slack, or prevent the seat belt assembly from being adjusted to remove slack.
- When you fasten the seat belt, be careful not to latch the seat belt in the buckles of another. It's very dangerous and you may not be protected by the seat belt properly.
- Do not unfasten the seat belt and do not fasten and unfasten the seat belt repeatedly while driving. This could result in loss of control, and an accident causing death, serious injury, or property damage.
- Make sure there is nothing in the buckle. The seat belt may not be fastened securely.

**Seat belt warning (for driver's seat)**

The driver’s seat belt warning light and chime will activate to the following table when the ignition switch is in "ON" position.
Safety features of your vehicle

<table>
<thead>
<tr>
<th>Conditions</th>
<th>Warning Pattern</th>
</tr>
</thead>
<tbody>
<tr>
<td>Seat Belt</td>
<td></td>

</table>

*1 Warning pattern repeats 11 times with an interval of 24 seconds. If the driver's seat belt is buckled, the light will stop within 6 seconds and chime will stop immediately.

*2 The light will stop within 6 seconds and chime will stop immediately.

Seat belt - Driver's 3-point system with emergency locking retractor

To fasten your seat belt:
To fasten your seat belt, pull it out of the retractor and insert the metal tab (1) into the buckle (2). There will be an audible "click" when the tab locks into the buckle.

The seat belt automatically adjusts to the proper length only after the lap belt portion is adjusted manually so that it fits snugly around your hips. If you lean forward in a slow, easy motion, the belt will extend and let you move around. If there is a sudden stop or impact, however, the belt will lock into position. It will also lock if you try to lean forward too quickly.

If you are not able to pull out the seat belt from the retractor, firmly pull the belt out and release it. Then you will be able to pull the belt out smoothly.
You can adjust the height of the shoulder belt anchor to one of 4 positions for maximum comfort and safety. The shoulder portion should be adjusted so that it lies across your chest and midway over your shoulder nearest the door and not your neck. The height of the adjusting seat belt should not be too near your neck. To adjust the height of the seat belt anchor, lower or raise the height adjuster into an appropriate position.

To raise the height adjuster, pull it up (1). To lower it, push it down (3) while pressing the height adjuster button (2). Release the button to lock the anchor into position. Try sliding the height adjuster to make sure that it has locked into position.

**WARNING**

- Verify the shoulder belt anchor is locked into position at the appropriate height. Never position the shoulder belt across your neck or face. Improperly positioned seat belts can cause serious injuries in an accident.
- Failure to replace seat belts after an accident could leave you with damaged seat belts that will not provide protection in the event of another collision leading to personal injury or death. Replace your seat belts after being in an accident as soon as possible.

**WARNING**

You should place the lap belt portion as low as possible and snugly across your hips, not on your waist. If the lap belt is located too high on your waist, it may increase the chance of injury in the event of a collision. Both arms should not be under or over the belt. Rather, one should be over and the other under, as shown in the illustration. Never wear the seat belt under the arm nearest the door.
Seat belts - Front passenger and rear seat 3-point system with combination locking retractor

To fasten your seat belt:
Combination retractor type seat belts are installed in the rear seat positions to help accommodate the installation of child restraint systems. Although a combination retractor is also installed in the front passenger seat position, it is strongly recommended that children always be seated in the rear seat. NEVER place any infant restraint system in the front seat of the vehicle.

This type of seat belt combines the features of both an emergency locking retractor seat belt and an automatic locking retractor seat belt. To fasten your seat belt, pull it out of the retractor and insert the metal tab into the buckle. There will be an audible "click" when the tab locks into the buckle. When not securing a child restraint, the seat belt operates in the same way as the driver's seat belt (Emergency Locking Retractor Type). It automatically adjusts to the proper length only after the lap belt portion of the seat belt is adjusted manually so that it fits snugly around your hips.

When the seat belt is fully extended from the retractor to allow the installation of a child restraint system, the seat belt operation changes to allow the belt to retract, but not to extend (Automatic Locking Retractor Type). Refer to "Using a child restraint system" in this section.

To convert from the automatic locking feature to the emergency locking operation mode, allow the unbuckled seat belt to fully retract.

When using the rear center seat belt, the buckle with the "CENTER" mark must be used.
To release the seat belt:
The seat belt is released by pressing the release button (1) in the locking buckle. When it is released, the belt should automatically draw back into the retractor.
If this does not happen, check the belt to be sure it is not twisted, then try again.

Pre-tensioner seat belt

Your vehicle is equipped with driver's and front passenger's pre-tensioner seat belts (retractor pretensioner and EFD (Emergency Fastening Device)). The pre-tensioner seat belts can be activated, where the frontal collision is severe enough, together with the air bags.

When the vehicle stops suddenly, or if the occupant tries to lean forward too quickly, the seat belt retractor will lock into position. In certain frontal collisions, the pre-tensioner will activate and pull the seat belt into tighter contact against the occupant's body.

(1) Retractor Pretensioner
The purpose of the retractor pretensioner is to make sure that the shoulder belts fit in tightly against the occupant's upper body in certain frontal collisions.

(2) EFD (Emergency Fastening Device)
The purpose of the EFD is to make sure that the pelvis belts fit in tightly against the occupant's lower body in certain frontal collisions. (for passenger's side)

If the system senses excessive tension on the driver or passenger's seat belt when the pre-tensioner system activates, the load limiter inside the retractor pre-tensioner will release some of the pressure on the affected seat belt.
Safety features of your vehicle

**WARNING**

- Do not put anything near the buckle. Placing objects near the buckle may increase the risk of personal injury in the event of a collision.
- For your safety, be sure that the belt webbing is not loose or twisted and always sit properly on your seat.

The seat belt pre-tensioner system consists mainly of the following components. Their locations are shown in the illustration:
1. SRS air bag warning light
2. Retractor pre-tensioner assembly
3. SRS control module
4. Emergency fastening device (EFD)

**WARNING**

To obtain maximum benefit from a pre-tensioner seat belt:
1. The seat belt must be worn correctly and adjusted to the proper position. Please read and follow all of the important information and precautions about your vehicle’s occupant safety features - including seat belts and air bags - that are provided in this manual.
2. Be sure you and your passengers always wear seat belts properly.
**NOTICE**

- Both the driver's and front passenger's seat belt pre-tensioner system may be activated not only in certain frontal collision but also in certain side collision or rollover, if the vehicle is equipped with a side or curtain air bag.
- When the pre-tensioner seat belts are activated, a loud noise may be heard and fine dust, which may appear to be smoke, may be visible in the passenger compartment. These are normal operating conditions and are not hazardous.
- Although it is harmless, the fine dust may cause skin irritation and should not be breathed for prolonged periods. Wash all exposed skin areas thoroughly after an accident in which the pre-tensioner seat belts were activated.
- Because the sensor that activates the SRS air bag is connected with the pre-tensioner seat belt, the SRS air bag warning light on the instrument panel will illuminate for approximately 6 seconds after the ignition switch has been turned to the ON position, and then it should turn off.

**CAUTION**

*If the pre-tensioner seat belt system are not working properly, this warning light will illuminate even if there is no malfunction of the SRS air bag. If the SRS air bag warning light does not illuminate when the ignition switch is turned ON, or if it remains illuminated after illuminating for approximately 6 seconds, or if it illuminates while the vehicle is being driven, have an authorized HYUNDAI dealer inspect the pre-tensioner seat belt and SRS air bag system as soon as possible.*

**WARNING**

- Pre-tensioners are designed to operate only one time. After activation, pre-tensioner seat belts must be replaced. All seat belts, of any type, should always be replaced after they have been worn during a collision.
- The pre-tensioner seat belt assembly mechanisms become hot during activation. Do not touch the pre-tensioner seat belt assemblies for several minutes after they have been activated.
- Do not attempt to inspect or replace the pre-tensioner seat belts yourself. This must be done by an authorized HYUNDAI dealer.
- Do not strike the pre-tensioner seat belt assemblies.
- Do not attempt to service or repair the pre-tensioner seat belt system in any manner.

(Continued)
Safety features of your vehicle

Seat belt precautions

**WARNING**
All occupants of the vehicle must wear their seat belts at all times. Seat belts and child restraints reduce the risk of serious or fatal injuries for all occupants in the event of a collision or sudden stop. Without a seat belt, occupants could be shifted too close to a deploying air bag, strike the interior structure or be thrown from the vehicle. Properly worn seat belts greatly reduce these hazards. Even with advanced air bags, unbelted occupants can be severely injured by a deploying air bag.

Always follow the precautions about seat belts, air bags and occupant seating contained in this manual.

**Infant or small child**
All 50 states have child restraint laws. You should be aware of the specific requirements in your state. Child and/or infant seats must be properly placed and installed in the rear seat. For more information about the use of these restraints, refer to “Child restraint system” in this section.

(Continued)

- Improper handling of the pre-tensioner seat belt assemblies, and failure to heed the warnings not to strike, modify, inspect, replace, service or repair the pre-tensioner seat belt assemblies may lead to improper operation or inadvertent activation and serious injury.
- Always wear the seat belts when driving or riding in a motor vehicle.
- If the vehicle or pre-tensioner seat belt must be discarded, contact an authorized HYUNDAI dealer.

**WARNING**
Every person in your vehicle needs to be properly restrained at all times, including infants and children. Never hold a child in your arms or lap when riding in a vehicle. The violent forces created during a crash will tear the child from your arms and throw the child against the interior. Always use a child restraint appropriate for your child’s height and weight.
**NOTICE**
Small children are best protected from injury in an accident when properly restrained in the rear seat by a child restraint system that meets the requirements of the Federal Motor Vehicle Safety Standards. Before buying any child restraint system, make sure that it has a label certifying that it meets Federal Motor Vehicle Safety Standard 213. The restraint must be appropriate for your child’s height and weight. Check the label on the child restraint for this information. Refer to “Child restraint system” in this section.

**Larger children**
Children who are too large for child restraint systems should always occupy the rear seat and use the available lap/shoulder belts. The lap portion should be fastened snug on the hips and as low as possible. Check belt fit periodically. A child’s squirming could put the belt out of position. Children are afforded the most safety in the event of an accident when they are restrained by a proper restraint system in the rear seat. If a larger child (over age 12) must be seated in the front seat, the child should be securely restrained by the available lap/shoulder belt and the seat should be placed in the rear-most position. Children age 12 and under should be restrained securely in the rear seat. NEVER place a child age 12 and under in the front seat. NEVER place a rear facing child seat in the front seat of a vehicle.

If the shoulder belt portion slightly touches the child’s neck or face, try placing the child closer to the center of the vehicle. If the shoulder belt still touches their face or neck they need to be returned to a child restraint system.

**WARNING - Shoulder belts on small children**
- Never allow a shoulder belt to be in contact with a child’s neck or face while the vehicle is in motion.
- If seat belts are not properly worn and adjusted on children, there is a risk of death or serious injury.
Pregnant women
The use of a seat belt is recommended for pregnant women to lessen the chance of injury in an accident. When a seat belt is used, the lap belt portion should be placed as low and snugly as possible on the hips, not across the abdomen. For specific recommendations, consult a physician.

Injured person
A seat belt should be used when an injured person is being transported. When this is necessary, you should consult a physician for recommendations.

One person per belt
Two people (including children) should never attempt to use a single seat belt. This could increase the severity of injuries in case of an accident.

Do not lie down
To reduce the chance of injuries in the event of an accident and to achieve maximum effectiveness of the restraint system, all passengers should be sitting up and the front and rear seats should be in an upright position when the car is moving. A seat belt cannot provide proper protection if the person is lying down in the rear seat or if the seats are in a reclined position.

WARNING - Pregnant women
Pregnant women must never place the lap portion of the safety belt over the area of the abdomen where the unborn child is located or above the abdomen where the belt could seriously injure or even cause the death of the unborn child during an impact.

WARNING
Riding with a reclined seatback increases your chance of serious or fatal injuries in the event of a collision or sudden stop. The protection of your restraint system (seat belts and air bags) is greatly reduced by reclining your seat. Seat belts must be snug against your hips and chest to work properly. The more the seatback is reclined, the greater the chance that an occupant's hips will slide under the lap belt causing serious internal injuries or the occupant's neck could strike the shoulder belt. Drivers and passengers should always sit well back in their seats, properly belted, and with the seatbacks upright.
Care of seat belts
Seat belt systems should never be disassembled or modified. In addition, care should be taken to assure that seat belts and belt hardware are not damaged by seat hinges, doors or other abuse.

Periodic inspection
All seat belts should be inspected periodically for wear or damage of any kind. Any damaged parts should be replaced as soon as possible.

Keep belts clean and dry
Seat belts should be kept clean and dry. If belts become dirty, they can be cleaned by using a mild soap solution and warm water. Bleach, dye, strong detergents or abrasives should not be used because they may damage and weaken the fabric.

When to replace seat belts
Entire in-use seat belt assembly or assemblies should be replaced if the vehicle has been involved in an accident. This should be done even if no damage is visible. Additional questions concerning seat belt operation should be directed to an authorized HYUNDAI dealer.

⚠️ WARNING - Pinched seat belt
Make sure that the webbing and/or buckle does not get caught or pinched in the rear seat when returning the rear seatback to its upright position. A caught or pinched webbing/buckle may become damaged and could fail during a collision or sudden stop resulting in serious injury or death.
Children riding in the car should sit in the rear seat and must always be properly restrained to minimize the risk of injury in an accident, sudden stop or sudden maneuver. According to accident statistics, children are safer when properly restrained in the rear seats than in the front seat. Larger children not in a child restraint should use one of the seat belts provided.

You should be aware of the specific requirements in your state. Child and/or infant safety seats must be properly placed and installed in the rear seat. You must use a commercially available child restraint system that meets the requirements of the Federal Motor Vehicle Safety Standards (FMVSS).

Child restraint systems are designed to be secured in vehicle seats by lap belts or the lap belt portion of a lap/shoulder belt, or by a LATCH system (if equipped).

Children could be injured or killed in a crash if their restraints are not properly secured. For small children and babies, a child seat or infant seat must be used. Before buying a particular child restraint system, make sure it fits your car seat and seat belts, and fits your child. Follow all the instructions provided by the manufacturer when installing the child restraint system.

**WARNING**

- A child restraint system must be placed in the rear seat. Never install a child or infant seat on the front passenger’s seat. Should an accident occur and cause the passenger-side air bag to deploy, it could severely injure or kill an infant or child seated in an infant or child seat. Thus only use a child restraint in the rear seat of your vehicle.

(Continued)

- A seat belt or child restraint system can become very hot if it is left in a closed vehicle on a sunny day, even if the outside temperature does not feel hot. Be sure to check the seat cover and buckles before placing a child there.

- When the child restraint system is not in use, store it in the luggage area or fasten it with a seat belt so that it will not be thrown forward in the case of a sudden stop or an accident.

- Children may be seriously injured or killed by an inflating air bag. All children, even those too large for child restraints, must ride in the rear seat.

(Continued)
To reduce the chance of serious or fatal injuries:

- Children of all ages are safer when restrained in the rear seat. A child riding in the front passenger seat can be forcefully struck by an inflating air bag resulting in serious or fatal injuries.
- Always follow the child restraint system manufacturer's instructions for installation and use of the child restraint.
- Always make sure the child seat is secured properly in the car and your child is securely restrained in the child seat.
- Never hold a child in your arms or lap when riding in a vehicle. The violent forces created during a crash will tear the child from your arms and throw the child against the car’s interior.

(Continued)

- Never put a seat belt over yourself and a child. During a crash, the belt could press deep into the child causing serious internal injuries.
- Never leave children unattended in a vehicle not even for a short time. The car can heat up very quickly, resulting in serious injuries to children inside. Even very young children may inadvertently cause the vehicle to move, entangle themselves in the windows, or lock themselves or others inside the vehicle.
- Never allow two children, or any two persons, to use the same seat belt.
- Children often squirm and reposition themselves improperly. Never let a child ride with the shoulder belt under their arm or behind their back. Always properly position and secure children in the rear seat.

(Continued)

- Never allow a child to stand-up or kneel on the seat or floor of a moving vehicle. During a collision or sudden stop, the child can be violently thrown against the vehicle’s interior, resulting in serious injury.
- Never use an infant carrier or a child safety seat that "hooks" over a seatback, it may not provide adequate security in an accident.
- Seat belts can become very hot, especially when the car is parked in direct sunlight. Always check seat belt buckles before fastening them over a child.
- After an accident, have an authorized HYUNDAI dealer check the child restraint system, seat belt, tether anchor and lower anchor.
- If there is not enough space to place the child restraint system because of the driver's seat, install the child restraint system in the rear right seat.
Using a child restraint system

For safety reasons, we recommend that the child restraint system be used in the rear seats.

**WARNING**

Never place a rear-facing child restraint in the front passenger seat, because of the danger that an inflating passenger-side air bag could impact the rear-facing child restraint and kill the child.

Since all passenger seat belts move freely under normal conditions and only lock under extreme or emergency conditions (emergency locking mode), you must manually change these seat belts to the automatic locking mode to secure a child restraint.

**WARNING - Child seat installation**

- A child can be seriously injured or killed in a collision if the child restraint is not properly anchored to the vehicle and the child is not properly restrained in the child restraint.

Before installing the child restraint system, read the instructions supplied by the child restraint system manufacturer.

- If the seat belt does not operate as described in this section, have the system checked immediately by your authorized HYUNDAI dealer.

- Failure to observe this manual's instructions regarding child restraint systems and the instructions provided with the child restraint system could increase the chance and/or severity of injury in an accident.

(Continued)
Safety features of your vehicle

Placing a passenger seat belt into the automatic locking mode

The automatic locking mode will help prevent the normal movement of the child in the vehicle from causing the seat belt to loosen and compromise the child restraint system. To secure a child restraint system, use the following procedure.

To install a child restraint system on the outboard or center rear seats, do the following:

1. Place the child restraint system in the seat and route the lap/shoulder belt around or through the restraint, following the restraint manufacturer’s instructions. Be sure the seat belt webbing is not twisted.

2. Fasten the lap/shoulder belt latch into the buckle. Listen for the distinct “click” sound.

   Position the release button so that it is easy to access in case of an emergency.

(Continued)

- If the vehicle headrest prevents proper installation of a child seat, the headrest of the respective seating position shall be readjusted or entirely removed.
3. Pull the shoulder portion of the seat belt all the way out. When the shoulder portion of the seat belt is fully extended, it will shift the retractor to the “Automatic locking” (child restraint) mode.

4. Slowly allow the shoulder portion of the seat belt to retract and listen for an audible “clicking” or “ratcheting” sound. This indicates that the retractor is in the “automatic locking” mode. If no distinct sound is heard, repeat steps 3 and 4.

5. Remove as much slack from the belt as possible by pushing down on the child restraint system while feeding the shoulder belt back into the retractor.

6. Push and pull on the child restraint system to confirm that the seat belt is holding it firmly in place. If it is not, release the seat belt and repeat steps 2 through 6.

7. Double check that the retractor is in the “Automatic locking” mode by attempting to pull more of the seat belt out of the retractor. If you cannot, the retractor is in the “Automatic locking” mode.
To remove the child restraint, press the release button on the buckle and then pull the lap/shoulder belt out of the restraint and allow the seat belt to retract fully.

**WARNING - Automatic locking mode**

The lap/shoulder belt automatically returns to the "emergency lock mode" whenever the belt is allowed to retract fully. Therefore, the preceding seven steps must be followed each time a child restraint is installed.

If the retractor is not in the Automatic Locking mode, the child restraint can move when your vehicle turns or stops suddenly. A child can be seriously injured or killed if the child restraint is not properly anchored to the car, including setting the retractor to the Automatic Locking mode.

When the seat belt is allowed to retract to its fully stowed position, the retractor will automatically switch from the "Automatic locking" mode to the emergency lock mode for normal adult usage.

**Securing a child restraint seat with "Tether Anchor" system**

Child restraint hooks are located on the rear of the seat back.

This symbol indicates the position of the tether anchor.
1. Route the child restraint seat strap over the seatback.
   For vehicles with adjustable headrests, route the tether strap under the headrest and between the headrest posts, otherwise route the tether strap over the top of the seatback.
2. Connect the tether strap hook to the appropriate child restraint hook holder and tighten to secure the child restraint seat.

**WARNING**
- When using the vehicle's "Tether Anchor" system to install a child restraint system in the rear seat, all unused vehicle rear seat belt metal latch plates or tabs must be latched securely in their seat belt buckles and the seat belt webbing must be retracted behind the child restraint to prevent the child from reaching and taking hold of unretracted seat belts. Unlatched metal latch plates or tabs may allow the child to reach the unretracted seat belts which may result in strangulation and a serious injury or death to the child in the child restraint.
- Do not place anything around the lower anchors. Also make sure that the seat belt is not caught in the lower anchors.

**WARNING**
- A child can be seriously injured or killed in a collision if the child restraint is not properly anchored to the car and the child is not properly restrained in the child restraint. Always follow the child seat manufacturer’s instructions for installation and use.

**WARNING - Tether strap**
- Never mount more than one child restraint to a single tether anchor or to a single lower anchorage point. The increased load caused by multiple seats may cause the tethers or anchorage points to break, causing serious injury or death.
Safety features of your vehicle

**WARNING - Child restraint check**
Check that the child restraint system is secure by pushing and pulling it in different directions. Incorrectly fitted child restraints may swing, twist, tip or separate causing death or serious injury.

**WARNING - Child restraint anchorage**
- Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used for adult seat belts or harnesses or for attaching other items or equipment to the vehicle.
- The tether strap may not work properly if attached somewhere other than the correct tether anchor.

**Securing a child restraint seat with child seat lower anchor system**

Some child seat manufacturers make child restraint seats that are labeled as LATCH or LATCH-compatible child restraint seats. LATCH stands for "Lower Anchors and Tethers for Children". These seats include two rigid or webbing mounted attachments that connect to two LATCH anchors at specific seating positions in your vehicle. This type of child restraint seat eliminates the need to use seat belts to attach the child seat in the rear seats.

Child restraint symbols are located on the left and right rear seat backs to indicate the position of the lower anchors for child restraints.

**WARNING - Unused rear seatbelts**
Always fasten the seatbelts behind the child restraint seat when they are not used to secure the child seat. Failure to do so may result in child strangulation.
LATCH anchors have been provided in your vehicle. The LATCH anchors are located in the left and right outboard rear seating positions. Their locations are shown in the illustration. There is no LATCH anchor provided for the center rear seating position.

The LATCH anchors are located between the seatback and the seat cushion of the rear seat left and right outboard seating positions. Follow the child seat manufacturer’s instructions to properly install child restraint seats with LATCH or LATCH-compatible attachments.

Once you have installed the LATCH child restraint, assure that the seat is properly attached to the LATCH and tether anchors.

Also, test the child restraint seat before you place the child in it. Tilt the seat from side to side. Also try to tug the seat forward. Check to see if the anchors hold the seat in place.

**WARNING**
Do not place anything around the lower anchors. Also make sure that the seat belt is not caught in the lower anchors.

**WARNING**
If the child restraint is not anchored properly, the risk of a child being seriously injured or killed in a collision greatly increases.

**WARNING - LATCH lower anchors**
LATCH lower anchors are only to be used with the left and right rear outboard seating positions. Never attempt to attach a LATCH equipped seat in the center seating position. You may damage the anchors or the anchors may fail and break in a collision.

**NOTICE**
The recommended weight for the LATCH system is under 65 lb (30 kg). How to calculate the child restraint weight:

\[
\text{Child restraint weight} = 65 \text{ lb (30 kg)} - \text{Child weight}
\]
Safety features of your vehicle

AIR BAG - ADVANCED SUPPLEMENTAL RESTRAINT SYSTEM

(1) Driver's front air bag
(2) Passenger's front air bag
(3) Side air bag
(4) Curtain air bag
(5) Driver's knee air bag

WARNING
Even in vehicles with air bags, you and your passengers must always wear the seat belts provided in order to minimize the risk and severity of injury in the event of a collision or rollover.

* The actual air bags in the vehicle may differ from the illustration.
How does the air bag system operate

- Air bags are activated (able to inflate if necessary) only when the ignition switch is turned to the ON or START position.
- The appropriate air bags inflate instantly in the event of serious frontal or side collision in order to help protect the occupants from serious physical injury.
- There is no single speed at which the air bags will inflate.

Generally, air bags are designed to inflate by the severity of a collision and its direction. These two factors determine whether the sensors send out an electronic deployment/inflation signal.
- Air bag deployment depends on a number of factors including vehicle speed, angles of impact and the density and stiffness of the vehicles or objects which your vehicle hits in the collision. Though, factors are not limited to those mentioned above.
- The front air bags will completely inflate and deflate in an instant. It is virtually impossible for you to see the air bags inflate during an accident.
- It is much more likely that you will simply see the deflated air bags hanging out of their storage compartments after the collision.
- In addition to inflating in serious side collisions, side and/or curtain air bags will inflate if the sensing system detects a rollover.
- When a rollover is detected, side and/or curtain airbags will remain inflated longer to help provide protection from ejection, especially when used in conjunction with the seat belts.
- In order to help provide protection, the air bags must inflate rapidly. The speed of air bag inflation is a consequence of the extremely short time in which to inflate the air bag between the occupant and the vehicle structures before the occupant impacts those structures.

This speed of inflation reduces the risk of serious or life-threatening injuries and is thus a necessary part of air bag design. However, air bag inflation can also cause injuries which normally can include facial abrasions, bruises and broken bones because the inflation speed also causes the air bags to expand with a great deal of force.
- **There are even circumstances under which contact with the air bag can cause fatal injuries, especially if the occupant is positioned excessively close to the air bag.**
Safety features of your vehicle

⚠️ WARNING

• To avoid severe personal injury or death caused by deploying air bags in a collision, the driver should sit as far back from the steering wheel air bag as possible (at least 10 inches (250 mm) away). The front passengers should always move their seats as far back as possible and sit back in their seat.

• Air bags inflate instantly in the event of collision, and passengers may be injured by the air bag expansion force if they are not in proper position.

• Air bag inflation may cause injuries which normally include facial or bodily abrasions, injuries from broken glasses or burns by the air bag inflation gasses.

Noise and smoke

When the air bags inflate, they make a loud noise and they leave smoke and powder in the air inside of the vehicle. This is normal and is a result of the ignition of the air bag inflator. After the air bag inflates, you may feel substantial discomfort in breathing due to the contact of your chest with both the seat belt and the air bag, as well as from breathing the smoke and powder. Open your doors and/or windows as soon as possible after impact in order to reduce discomfort and prevent prolonged exposure to the smoke and powder.

Though the smoke and powder are non-toxic, they may cause irritation to the skin (eyes, nose and throat, etc.). If this is the case, wash and rinse with cold water immediately and consult a doctor if the symptom persists.

⚠️ WARNING - Hot components

Do not touch the air bag storage area’s internal components immediately after airbag inflation. The air bag related parts in the steering wheel, instrument panel and the roof rails above the front and rear doors are very hot. Hot components can result in burn injuries.
**Do not install a child restraint on the front passenger's seat**

Never place a rear-facing child restraint in the front passenger's seat. If the air bag deploys, it would impact the rear-facing child restraint, causing serious or fatal injury.

In addition, do not place front-facing child restraints in the front passenger's seat either. If the front passenger air bag inflates, it could cause serious or fatal injuries to the child.

**WARNING - Air bag deployment**

When children are seated in the rear outboard seats of a vehicle equipped with side and/or curtain air bags, install the child restraint system as far away from the door side as possible. Inflation of the side and/or curtain air bags could cause serious injury or death to an infant or child.

**Air bag warning light**

The purpose of the air bag warning light in your instrument panel is to alert you of a potential problem with your airbag system, which includes side and/or curtain airbags used for rollover protection.

When the ignition switch is turned ON, the indicator light should illuminate for approximately 6 seconds, then go off.
Safety features of your vehicle

**SRS components and functions**

The SRS consists of the following components:
1. Driver's front air bag module
2. Passenger's front air bag module
3. Side air bag modules
4. Curtain air bag modules
5. Retractor pre-tensioner assemblies
6. Air bag warning light
7. SRS control module (SRSCM)/Rollover sensor
8. Front impact sensors
9. Pressure type side impact sensors
10. PASS AIR BAG “OFF” indicator (Front passenger's seat only)
11. Occupant classification system (Front passenger's seat only)
12. Driver's and front passenger's seat belt buckle sensors
13. Emergency fastening device (EFD)
14. Acceleration type side impact sensors
15. Driver's knee air bag module

The SRSCM continually monitors all SRS components while the ignition switch is ON to determine if a crash impact is severe enough to require air bag deployment or pre-tensioner seat belt deployment.

The SRS air bag warning light "__). on the instrument panel will illuminate for about 6 seconds after the ignition switch is turned to the ON position, after which the SRS air bag warning light "__). should go out.
Safety features of your vehicle

**WARNING**
If any of the following conditions occurs, this indicates a malfunction of the SRS. Have an authorized HYUNDAI dealer inspect the air bag system as soon as possible.

- The light does not turn on briefly when you turn the ignition ON.
- The light stays on after illuminating for approximately 6 seconds.
- The light comes on while the vehicle is in motion.
- The light blinks when the ignition switch is in ON position.

The front air bag modules are located in the center of the steering wheel, in the front passenger's panel above the glove box and in the driver's side knee bolster. When the SRSCM detects a sufficiently severe impact to the front of the vehicle, it will automatically deploy the front air bags.

Upon deployment, tear seams molded directly into the pad covers will separate under pressure from the expansion of the air bags. Further opening of the covers then allows full inflation of the air bags.
A fully inflated air bag, in combination with a properly worn seat belt, slows the driver's or the passenger's forward motion, reducing the risk of head and chest injury.

After complete inflation, the air bag immediately starts deflating, enabling the driver to maintain forward visibility and the ability to steer or operate other controls.

**WARNING**

- Do not install or place any accessories (drink holder, CD or discs holder, sticker, etc.) on the front passenger's panel above the glove box in a vehicle with a passenger's air bag. Such objects may become dangerous projectiles and cause injury if the passenger's air bag inflates.

(Continued)
If the SRS air bag warning light "ichael" does not illuminate, or continuously remains on after illuminating for about 6 seconds or blinks when the ignition switch is turned to the ON position, or after the engine is started, comes on while driving, the SRS is not working properly. If this occurs, have your vehicle immediately inspected by an authorized HYUNDAI dealer.

Before you replace a fuse or disconnect a battery terminal, turn the ignition switch to the LOCK position and remove the ignition key for ignition key, and turn the engine start/stop button to the OFF position for smart key. Never remove or replace the air bag related fuse(s) when the ignition switch is in the ON position. Failure to heed this warning will cause the SRS air bag warning light to illuminate.

WARNING

• If an air bag deploys, there may be a loud noise followed by a fine dust released in the vehicle. These conditions are normal and are not hazardous - the air bags are packed in this fine powder. The dust generated during air bag deployment may cause skin or eye irritation as well as aggravate asthma for some persons. Always wash all exposed skin areas thoroughly with cold water and a mild soap after an accident in which the air bags were deployed.

• The SRS can function only when the ignition switch is in the ON position.

(Continued)
Your vehicle is equipped with an occupant classification system in the front passenger's seat. The occupant classification system is designed to detect the presence of a properly-seated front passenger and determine if the passenger's front air bag should be enabled (may inflate) or not. The driver's front air bag is not affected or controlled by the occupant classification system.

**Main components of occupant classification system**

- A detection device located within the front passenger seat cushion.
- Electronic system to determine whether the front passenger air bag system should be activated or deactivated.
- An indicator light located on the instrument panel which illuminates the words PASS AIR BAG "OFF" indicating the front passenger air bag system is deactivated.
- The instrument panel air bag indicator light is interconnected with the occupant classification system.

If the front passenger seat is occupied by a person that the system determines to be of adult size, and he/she sits properly (sitting upright with the seatback in an upright position, centered on the seat cushion with their seat belt on, legs comfortably extended and their feet on the floor), the PASS AIR BAG "OFF" indicator will be turned off and the front passenger's air bag will be able to inflate, if necessary, in frontal crashes.

You will find the PASS AIR BAG "OFF" indicator on the center facia panel. This system detects the conditions 1~4 in the following table and activates or deactivates the front passenger air bag based on these conditions.

Always be sure that you and all vehicle occupants are seated and restrained properly (sitting upright with the seat in an upright position, centered on the seat cushion, with the person's legs comfortably extended, feet on the floor, and wearing the safety belt properly) for the most effective protection by the air bag and the safety belt.

- The OCS may not function properly if the passenger takes actions which can affect the classification system. These include:
  (1) Failing to sit in an upright position.
  (2) Leaning against the door or center console.
  (3) Sitting towards the sides or the front of the seat.
  (4) Putting legs on the dashboard or resting them on other locations which reduce the passenger weight on the front seat.
  (5) Improperly wearing the safety belt.
  (6) Reclining the seat back.
**Condition and operation in the front passenger occupant classification system**

<table>

</tbody>
</table>

*1) The system judges a person of adult size as an adult. When a smaller adult sits in the front passenger seat, the system may recognize him/her as a child depending on his/her physique and posture.

*2) Do not allow children to ride in the front passenger seat. When a larger child who has outgrown a child restraint system sits in the front passenger seat, the system may recognize him/her as an adult depending upon his/her physique or sitting position.

*3) Never install a child restraint system on the front passenger seat.

*4) The PASS AIR BAG "OFF" indicator may turn on or off when a child above 12 months to 12 years old (with or without child restraint system) sits in the front passenger seat. This is a normal condition.

**WARNING - OCS system**

Riding in an improper position adversely affects the occupant classification system (OCS) and may result in the deactivation of front passenger airbag. It is important for the driver to instruct the passenger as to the proper seating instructions as contained in this manual.

(Continued)
Safety features of your vehicle

(Continued)

- Never sit with hips shifted towards the front of the seat.
- Never place feet on the dashboard.
- Never put a heavy load, an active electronic device or blanket in the front passenger seat or seatback pocket.
- Never sit on the front passenger seat with anything attached such as a blanket or cushion.
- Never excessively recline the front passenger seatback.
- Never lean on the door or center console.
- Never sit on one side of the front passenger seat.
When an adult is seated in the front passenger seat, if the PASS AIR BAG “OFF” indicator is on, turn the ignition switch to the LOCK or OFF position and ask the passenger to sit properly (sitting upright with the seat back in an upright position, centered on the seat cushion with their seat belt on, legs comfortably extended and their feet on the floor). Restart the engine and have the person remain in that position. This will allow the system to detect the person and to enable the passenger air bag.

If the PASS AIR BAG "OFF" indicator is still on, ask the passenger to move to the rear seat.

**NOTICE**
The PASS AIR BAG "OFF" indicator illuminates for about 4 seconds after the ignition switch is turned to the ON position or after the engine is started. If the front passenger seat is occupied, the occupant classification sensor will then classify the front passenger after several more seconds.

**WARNING - AIR BAG "OFF" light**
Do not allow an adult passenger to ride in the front seat when the PASS AIR BAG “OFF” indicator is illuminated, because the air bag will not deploy in the event of a crash. The driver must instruct the passenger to reposition himself in the seat. Failure to properly position yourself may lead to airbag deactivation resulting in airbag non-deployment in a collision. If the PASS AIR BAG “OFF” indicator remains illuminated after the passenger repositions themselves properly and the vehicle is restarted, it is recommended the passenger move to the rear seat because the passenger’s front air bag will not deploy.

**WARNING**
Do not hang onto the front passenger seat. Do not hang any items, such as a seatback table or entertainment system, on the front passenger seatback. Do not place feet on the front passenger seatback. Do not place any items under the front passenger seat. Any of these could interfere with proper sensor operation.
**WARNING**

- Even though your vehicle is equipped with the occupant classification system, never install a child restraint system in the front passenger's seat. A deploying air bag can forcefully strike a child resulting in serious injuries or death. Any child age 12 and under should ride in the rear seat. Children too large for child restraints should use the available lap/shoulder belts. No matter what type of crash, children of all ages are safer when restrained in the rear seat.

(Continued)

- If the PASS AIR BAG "OFF" indicator is illuminated when the front passenger's seat is occupied by an adult and he/she sits properly (sitting upright with the seatback in an upright position, centered on the seat cushion with their seat belt on, legs comfortably extended and their feet on the floor), have that person sit in the rear seat.

- Do not modify or replace the front passenger seat. Don't place anything on or attach anything such as a blanket or seat heater to the front passenger seat. This can adversely affect the occupant classification system.

- Do not sit on sharp objects such as tools when occupying the front passenger seat. This can adversely affect the occupant classification system.

(Continued)

- Do not use accessory seat covers on the front seats.

- Accident statistics show that children are safer if they are restrained in the rear, as opposed to the front seat. It is recommended that child restraints be secured in a rear seat, including an infant riding in a rear-facing infant seat, a child riding in a forward-facing child seat and an older child riding in a booster seat.

- Air bags can only be used once - have an authorized HYUNDAI dealer replace the air bag immediately after deployment.

(Continued)
(Continued)

• A smaller-stature adult in the front passenger seat who is not seated correctly (for example: seat excessively reclined, leaning on the door or center console, or hips shifted forward in the seat) can cause a condition where the occupant classification system senses less weight than if the occupant were seated properly (sitting upright with the seatback in an upright position, centered on the seat cushion with their seat belt on, legs comfortably extended and their feet on the floor). This condition can result in an adult potentially being misclassified as a child and illumination of the PASS AIR BAG "OFF" indicator.

WARNING
If the occupant classification system is not working properly, the SRS air bag warning light on the instrument panel will illuminate because the passenger's front air bag is connected with the occupant classification system. If there is a malfunction of the occupant classification system, the PASS AIR BAG "OFF" indicator will not illuminate and the passenger's front air bag will inflate in frontal impact crashes even if there is no occupant in the front passenger's seat. If the SRS air bag warning light does not illuminate when the ignition switch is turned to the ON position, remains illuminated after approximately 6 seconds or blinks when the ignition switch is turned to the ON position, or if it illuminates while the vehicle is being driven, have an authorized HYUNDAI dealer inspect the occupant classification system and the SRS air bag system as soon as possible.

Driver's and passenger's front air bag
Safety features of your vehicle

Your vehicle is equipped with a Supplemental Restraint (Air Bag) System and the lap/shoulder belts at both the driver and passenger seating positions.

The indications of the system's presence are the letters "SRS AIR BAG" embossed on the air bag pad cover in the steering wheel, on the knee bolster below the steering wheel column and the passenger's side front panel pad above the glove box.

The SRS consists of air bags installed under the pad covers in the center of the steering wheel, in the knee bolster below the steering wheel column and the passenger's side front panel above the glove box.

The purpose of the SRS is to provide the vehicle's driver and/or the front passenger with additional protection than that offered by the seat belt system alone in case of a frontal impact of sufficient severity.

The seat belt buckle sensors determine if the driver and front passenger's seat belts are fastened. These sensors provide the ability to control the SRS deployment based on whether or not the seat belts are fastened, and how severe the impact is.

The advanced SRS offers the ability to control the air bag inflation within two levels. A first stage level is provided for moderate-severity impacts. A second stage level is provided for more severe impacts.

According to the impact severity and seat belt usage, the SRSCM (SRS Control Module) controls the air bag inflation. Failure to properly wear seat belts can increase the risk or severity of injury in an accident.

Additionally, your vehicle is equipped with an occupant classification system in the front passenger's seat. The occupant classification system detects the presence of a passenger in the front passenger's seat and will turn off the front passenger's air bag under certain conditions. For more detail, see "Occupant classification system" in this section.
\section*{Safety features of your vehicle}

\textbf{\textbullet\textbullet\textbullet\ NOTICEx}

\begin{itemize}
  \item Be sure to read information about the SRS on the labels provided on the sun visor.
  \item Advanced air bags are combined with pre-tensioner seat belts to help provide enhanced occupant protection in frontal crashes. Front air bags are not intended to deploy in collisions in which protection can be provided by the pre-tensioner seat belt.
\end{itemize}

\textbf{\textbullet\textbullet\textbullet\ WARNINGx}

\begin{itemize}
  \item Do not place any objects underneath the front seats as they could interfere with the occupant classification system.
\end{itemize}

\textbf{\textbullet\textbullet\textbullet\ WARNINGx}

If you are considering modification of your vehicle due to a disability, please contact the Hyundai Customer Assistance Center at 1-800-633-5151.

\textbf{\textbullet\textbullet\textbullet\ WARNINGx}

Always use seat belts and child restraints - every trip, every time, everyone! Air bags inflate with considerable force and in the blink of an eye. Seat belts help keep occupants in proper position to obtain maximum benefit from the air bag. Even with advanced air bags, improperly and unbelted occupants can be severely injured when the air bag inflates.

Always follow the precautions about seat belts, air bags and occupant safety contained in this manual. To reduce the chance of serious or fatal injuries and receive the maximum safety benefit from your restraint system:

\begin{itemize}
  \item Never place a child in any child or booster seat in the front seat.
  \item ABC - Always Buckle Children in the back seat. It is the safest place for children of any age to ride.
\end{itemize}

(Continued)
Safety features of your vehicle

(Continued)

- Front and side air bags can injure occupants improperly positioned in the front seats.
- Move your seat as far back as practical from the front air bags, while still maintaining control of the vehicle.
- You and your passengers should never sit or lean unnecessarily close to the air bags. Improperly positioned driver and passengers can be severely injured by inflating air bags.
- Never lean against the door or center console - always sit in an upright position.
- Do not allow a passenger to ride in the front seat when the PASS AIR BAG "OFF" indicator is illuminated, because the air bag will not deploy in the event of a moderate or severe frontal crash.

(Continued)

- No objects should be placed over or near the air bag modules on the steering wheel, instrument panel, and the front passenger's panel above the glove box, because any such object could cause harm if the vehicle is in a crash severe enough to cause the air bags to deploy.
- Never place covers, blankets or seat warmers on the passenger seat as these may interfere with the occupant classification system.
- Do not tamper with or disconnect SRS wiring or other components of the SRS system. Doing so could result in injury, due to accidental deployment of the air bags or by rendering the SRS inoperative.

(Continued)

- If the SRS air bag warning light remains illuminated while the vehicle is being driven, have an authorized HYUNDAI dealer inspect the air bag system as soon as possible.
- Air bags can only be used once - have an authorized HYUNDAI dealer replace the air bag immediately after deployment.
- The SRS is designed to deploy the front air bags only when frontal impact is sufficiently severe and when the impact angle is toward from the forward longitudinal axis of the vehicle. Additionally, the air bags will only deploy once. Seat belts must be worn at all times.

(Continued)
Safety features of your vehicle

(Continued)
• Front air bags are not intended to deploy in side-impact, rear-impact or rollover crashes. However, when frontal deployment threshold is satisfied at side-impact, front air bags may deploy. In addition, front air bags will not deploy in frontal crashes below the deployment threshold.
• Even though your vehicle is equipped with the occupant classification system, do not install a child restraint system in the front passenger seat position. A child restraint system must never be placed in the front seat. The infant or child could be severely injured or killed by an air bag deployment in case of an accident.

(Continued)
• Children age 12 and under must always be properly restrained in the rear seat. Never allow children to ride in the front passenger seat. If a child over 12 must be seated in the front seat, he or she must be properly belted and the seat should be moved as far back as possible.
• For maximum safety protection in all types of crashes, all occupants including the driver should always wear their seat belts whether or not an air bag is also provided at their seating position to minimize the risk of severe injury or death in the event of a crash. Do not sit or lean unnecessarily close to the air bag while the vehicle is in motion.

(Continued)
• Sitting improperly or out of position can result in serious or fatal injury in a crash. All occupants should sit upright with the seatback in an upright position, centered on the seat cushion with their seat belt on, legs comfortably extended and their feet on the floor until the vehicle is parked and the ignition key is removed.
• The SRS air bag system must deploy very rapidly to provide protection in a crash. If an occupant is out of position because of not wearing a seat belt, the air bag may forcefully contact the occupant causing serious or fatal injuries.
Side air bag

The side air bags are designed to deploy during certain side-impact collisions, depending on the crash severity, angle, speed and point of impact. However, when side deployment threshold is satisfied at front impact, side air bags may deploy.

The side air bags are not designed to deploy in all side impact situations or rollover situations.

The side air bags may deploy on the side of the impact.

The side and/or curtain airbags on both sides of the vehicle may deploy if a rollover or possible rollover is detected.

**WARNING**

Do not allow the passengers to lean their heads or bodies onto doors, put their arms on the doors, stretch their arms out of the window, or place objects between the doors and passengers when they are seated on seats equipped with side and/or curtain air bags.

**WARNING**

- The side air bags is supplemental to the driver's and the passenger's seat belt systems and is not a substitute for them. Therefore your seat belts must be worn at all times while the vehicle is in motion.

The air bags deploy only in certain side impact conditions severe enough to cause significant injury to the vehicle occupants.

- For best protection from the side air bag system and to avoid being injured by the deploying side air bags, both front seat occupants should sit in an upright position with the seat belt properly fastened. The driver's hands should be placed on the steering wheel at the 9:00 and 3:00 positions. The passenger's arms and hands should be placed on their laps.

(Continued)
Safety features of your vehicle

Curtain air bag

The actual air bags in the vehicle may differ from the illustration.

Curtain air bags are located along both sides of the roof rails above the front and rear doors.

(Continued)

- Do not use any accessory seat covers.
- Use of seat covers could reduce or prevent the effectiveness of the system.
- Do not install any accessories on the side or near the side air bag.
- Do not place any objects over the air bag or between the air bag and yourself.
- Do not place any objects (an umbrella, bag, etc.) between the front door and the front seat. Such objects may become dangerous projectiles and cause injury if the supplemental side air bag inflates.
- To prevent unexpected deployment of the side air bag that may result in personal injury, avoid impact to the side impact sensor when the ignition switch is on.

(Continued)

- If the seat or seat cover is damaged, have the vehicle checked and repaired by an authorized HYUNDAI dealer because your vehicle is equipped with side air bags and an occupant classification system.
Safety features of your vehicle

They are designed to help protect occupants in certain side impacts and to help prevent them from ejecting out of the vehicle as a result of a rollover, especially when the seatbelts are also in use.

- The curtain air bags are designed to deploy during certain side impact collisions, depending on the crash severity, angle, speed and point of impact. However, when side deployment threshold is satisfied at front-impact, curtain air bags may deploy.
- The curtain air bags may deploy on the side of the impact.
- Also, the curtain air bags on both sides of the vehicle will deploy in certain rollover situations.
- The curtain air bags are not designed to deploy in all side impact or rollover situations.

**WARNING**

- In order for side and curtain air bags to provide the best protection, front seat occupants and outboard rear occupants should sit in an upright position with the seat belts properly fastened.
  Importantly, children should sit in a proper child restraint system in the rear seat.
- When children are seated in the rear outboard seats, they must be seated in the proper child restraint system. Make sure to put the child restraint system as far away from the door side as possible, and secure the child restraint system in a locked position.

(Continued)

- Do not allow the passengers to lean their heads or bodies onto doors, put their arms on the doors, stretch their arms out of the window, or place objects between the doors and passengers when they are seated on seats equipped with side and/or curtain air bags.
- Never try to open or repair any components of the side curtain air bag system. This should only be done by an authorized HYUNDAI dealer.
  Failure to follow the above instructions can result in injury or death to the vehicle occupants in an accident.
Why didn’t my air bag go off in a collision? (Inflation and non-inflation conditions of the air bag)
There are many types of accidents in which the air bag would not be expected to provide additional protection.
These include rear impacts, second or third collisions in multiple impact accidents, as well as low speed impacts.

**Air bag collision sensors**

1. SRS control module / Rollover sensor
2. Front impact sensor
3. Pressure type side impact sensor
4. Acceleration type side impact sensor
**WARNING - Air bag sensors**

- Do not hit or allow any objects to impact the locations where air bags or sensors are installed. This may cause unexpected air bag deployment, which could result in serious personal injury or death.
- If the installation location or angle of the sensors is altered in any way, the air bags may deploy when they should not or they may not deploy when they should, causing severe injury or death.

Therefore, do not try to perform maintenance on or around the air bag sensors. Have the vehicle checked and repaired by an authorized HYUNDAI dealer.

• Problems may arise if the sensor installation angles are changed due to the deformation of the front bumper, body or C pillars or front door where side collision sensors are installed. Have the vehicle checked and repaired by an authorized HYUNDAI dealer.

• Your vehicle has been designed to absorb impact and deploy the air bag(s) in certain collisions. Installing bumper guards or side steppers or replacing a bumper with non-genuine parts may adversely affect your vehicle's collision and air bag deployment performance.

**Air bag inflation conditions**

**Front air bags**

Front air bags are designed to inflate in a frontal collision depending on the intensity, speed or angles of impact of the front collision.
Safety features of your vehicle

Side and curtain air bags
Side and curtain air bags are designed to inflate when an impact is detected by side collision sensors depending on the strength, speed or angles of impact resulting from a side impact collision.

Also, the side and curtain air bags are designed to inflate when a rollover is detected by the rollover sensor.

Although the front air bags (driver's front, knee and front passenger's air bags) are designed to inflate in frontal collisions, they also may inflate in other types of collisions if the front impact sensors detect a sufficient frontal force in another type of impact. Side and curtain air bags are designed to inflate in certain side impact collisions. They may inflate in other type of collisions where a side force is detected by the sensors.

Side air bags and/or curtain air bags may also inflate where rollover sensors indicate the possibility of a rollover occurring (even if none actually occurs) or in other situations, including when the vehicle is tilted while being towed. Even where side and/or curtain air bags would not provide impact protection in a rollover, however, they will deploy to prevent ejection of occupants, especially those who are restrained with seat belts.

If the vehicle chassis is impacted by bumps or objects on unimproved roads, the air bags may deploy. Drive carefully on unimproved roads or on surfaces not designed for vehicle traffic to prevent unintended air bag deployment.

The actual air bags in the vehicle may differ from the illustration.
Air bag non-inflation conditions

- In certain low-speed collisions the air bags may not deploy. The air bags are designed not to deploy in such cases because they may not provide benefits beyond the protection of the seat belts in such collisions.

- Air bags are not designed to inflate in rear collisions, because occupants are moved backward by the force of the impact. In this case, inflated air bags would not be able to provide any additional benefit.

- Front air bags may not inflate in side impact collisions, because occupants move to the direction of the collision, and thus in side impacts, frontal air bag deployment would not provide additional occupant protection. However, side and curtain air bags may inflate depending on the intensity, vehicle speed and angles of impact.
• In an angled collision, the force of impact may direct the occupants in a direction where the air bags would not be able to provide any additional benefit, and thus the SRS may not deploy any air bags.

• Just before impact, drivers often brake heavily. Such heavy braking lowers the front portion of the vehicle causing it to “ride” under a vehicle with a higher ground clearance. Air bags may not inflate in this “under-ride” situation because forces that are detected by sensors may be reduced by such “under-ride” collisions.

• Front air bags may not inflate in rollover accidents where the SRSCM indicates that the front air bag deployment would not provide additional occupant protection.
Safety features of your vehicle

SRS Care

The SRS is virtually maintenance-free and so there are no parts you can safely service by yourself. If the SRS air bag warning light "\(\)" does not illuminate, when you turn the ignition on, or continuously remains on, have your vehicle immediately inspected by an authorized HYUNDAI dealer.

Any work on the SRS system, such as removing, installing, repairing, or any work on the steering wheel, the front passenger's panel, front seats and roof rails must be performed by an authorized HYUNDAI dealer. Improper handling of the SRS system may result in serious personal injury.

To clean the air bag pad covers, use only a soft, dry cloth or one which has been moistened with plain water. Solvents or cleaners could adversely affect the air bag covers and proper deployment of the system.

\(\text{WARNING}\)

- Modification to SRS components or wiring, including the addition of any kind of badges to the pad covers or modifications to the body structure, can adversely affect SRS performance and lead to possible injury.
- Not only the modification of the parts where the SRS sensors are but also the modification of other parts of the vehicle may affect the SRS performance and lead to possible injury.
- No objects should be placed over or near the air bag modules on the steering wheel, instrument panel, and the front passenger's panel above the glove box, because any such object could cause harm if the vehicle is in a crash severe enough to cause the air bags to inflate.

(Continued)
If components of the air bag system must be discarded, or if the vehicle must be scrapped, certain safety precautions must be observed. An authorized HYUNDAI dealer knows these precautions and can give you the necessary information. Failure to follow these precautions and procedures could increase the risk of personal injury.

Additional safety precautions

- **Never let passengers ride in the cargo area or on top of a folded-down back seat.** All occupants should sit upright, fully back in their seats with their seat belts on and their feet on the floor.
- **Passengers should not move out of or change seats while the vehicle is moving.** A passenger who is not wearing a seat belt during a crash or emergency stop can be thrown against the inside of the vehicle, against other occupants, or out of the vehicle.
- **Each seat belt is designed to restrain one occupant.** If more than one person uses the same seat belt, they could be seriously injured or killed in a collision.
- **Do not use any accessories on seat belts.** Devices claiming to improve occupant comfort or reposition the seat belt can reduce the protection provided by the seat belt and increase the chance of serious injury in a crash.
- **Passengers should not place hard or sharp objects between themselves and the air bags.** Carrying hard or sharp objects on your lap or in your mouth can result in injuries if an air bag inflates.
- **Keep occupants away from the air bag covers.** All occupants should sit upright, fully back in their seats with their seat belts on and their feet on the floor. If occupants are too close to the air bag covers, they could be injured if the air bags inflate.
- **Do not attach or place objects on or near the air bag covers.** Any object attached to or placed on the front or side air bag covers could interfere with the proper operation of the air bags.
- **Do not modify the front seats.** Modification of the front seats could interfere with the operation of the supplemental restraint system sensing components or side air bags.
- **Do not place items under the front seats.** Placing items under the front seats could interfere with the operation of the supplemental restraint system sensing components and wiring harnesses.
Safety features of your vehicle

• Never hold an infant or child on your lap. The infant or child could be seriously injured or killed in the event of a crash. All infants and children should be properly restrained in appropriate child safety seats or seat belts in the rear seat.

WARNING
• Sitting improperly or out of position can cause occupants to be shifted too close to a deploying air bag, strike the interior structure or be thrown from the vehicle resulting in serious injury or death.
• Always sit upright with the seatback in an upright position, centered on the seat cushion with your seat belt on, legs comfortably extended and your feet on the floor.
• Be careful not to cause impact to the doors when the ignition is ON. The air bags may inflate.

Adding equipment to or modifying your air bag-equipped vehicle
If you modify your vehicle by changing your vehicle's frame, bumper system, front end or side sheet metal or ride height, this may affect the operation of your vehicle's air bag system.

Air bag warning label
Air bag warning labels, some required by the U.S. National Highway Traffic Safety Administration (NHTSA), are attached to alert the driver and passengers of potential risks of the air bag system.

FOLDING KEY

Record your key number

The key code number is stamped or printed on the key code tag attached to the key set. Should you lose your keys, this number will enable an authorized HYUNDAI dealer to duplicate the keys easily. Remove the key code tag and store it in a safe place. Also, record the code number and keep it in a safe and handy place, but not in the vehicle.

Key operations

- Used to start the engine.
- Used to lock and unlock the doors.
- Used to lock and unlock the glove box.
- To unfold the key, press the release button then the key will unfold automatically. To fold the key, fold the key manually while pressing the release button.

⚠️ CAUTION
Do not fold the key without pressing the release button. This may damage the key.

⚠️ WARNING
Use only HYUNDAI original parts for the ignition key in your vehicle. If an aftermarket key is used, the ignition switch may not return to ON after START. If this happens, the starter will continue to operate causing damage to the starter motor and possible fire due to excessive current in the wiring.
**Door Lock (1)**

1. Close all doors, engine hood and liftgate (tailgate).
2. Press the lock button (1).
3. All doors and liftgate (tailgate) will lock. The hazard warning lights will blink once.
4. If the lock button is pressed once more within 4 seconds, the hazard warning lights will blink and the horn will sound once.
5. Make sure that doors are locked by checking the door lock button inside or pulling the outside door handle.

**Door Unlock (2)**

1. Press the unlock button (2).
2. The driver's door will unlock. The hazard warning lights will blink two times.
3. Press the unlock button (2) twice within 4 seconds and all doors and liftgate (tailgate) will unlock. The hazard warning lights will blink two times.

**NOTICE**

You can activate or deactivate the Two Turn Unlock function. Refer to "User settings" in this section.

---

**WARNING - Ignition key**

Leaving children unattended in a vehicle with the ignition key is dangerous even if the key is not in the ignition switch is in the ACC or ON position.

Children could accidentally place the key in the ignition switch.

The ignition key would enable children to operate power windows or other controls, or even make the vehicle move, which could result in serious bodily injury or even death. Never leave the keys in your vehicle with unsupervised children, when the engine is running.
Features of your vehicle

**Liftgate (Tailgate) unlock (3)**
The liftgate (tailgate) is unlocked if the button is pressed for more than 1 second.
Also, once the liftgate (tailgate) is opened and then closed, the liftgate (tailgate) will be locked automatically.

**Panic (4)**
The horn sounds and hazard warning lights flash for about 30 seconds if this button is pressed for more than 1.5 seconds. To stop the horn and lights, press any button except the trunk button on the transmitter.

**Transmitter precautions**

*NOTICE*

The transmitter will not work if any of following occur:

- The ignition key is in the ignition switch.
- You exceed the operating distance limit (about 90 feet [30 m]).
- The battery in the transmitter is weak.
- Other vehicles or objects may be blocking the signal.
- The weather is extremely cold.
- The transmitter is close to a radio transmitter such as a radio substation or an airport which can interfere with normal operation of the transmitter.

When the transmitter does not work correctly, open and close the door with the ignition key. If you have a problem with the transmitter, contact an authorized HYUNDAI dealer. (Continued)

- If the transmitter is in close proximity to your mobile phone, the signal could be blocked by your mobile phones normal operational signals. This is especially important when the phone is active such as making and receiving calls, text messaging, and/or sending/receiving emails. Avoid placing the transmitter and your mobile phone in the same pants or jacket pocket and always try to maintain an adequate distance between the two devices.

**CAUTION**

Keep the transmitter away from water or any liquid and fire.
If the inside of the transmitter gets damp (due to drinks or moisture), or is heated, internal circuit may malfunction.
Battery replacement

The transmitter uses a 3 volt lithium battery which will normally last for several years. When replacement is necessary, use the following procedure.

1. Insert a slim tool into the slot and gently pry open the transmitter center cover.
2. Replace the battery with a new battery (CR2032). When replacing the battery, make sure the battery position.
3. Install the battery in the reverse order of removal.

For replacement transmitters, see an authorized HYUNDAI dealer for transmitter reprogramming.

- The transmitter is designed to give you years of trouble-free use, however it can malfunction if exposed to moisture or static electricity. If you are unsure how to use your transmitter or replace the battery, contact an authorized HYUNDAI dealer.
- Using the wrong battery can cause the transmitter to malfunction. Be sure to use the correct battery.
- To avoid damaging the transmitter, don't drop it, get it wet, or expose it to excessive heat or sunlight.
- An inappropriately disposed battery can be harmful to the environment and may cause risk to human health. Dispose the battery according to your local law(s) or regulation.

CAUTION - Transmitter damage

Do not drop, wet or expose the keyless entry system transmitter to excessive heat or sunlight.
Features of your vehicle

**Immobilizer system (if equipped)**

Your vehicle is equipped with an electronic engine immobilizer system to reduce the risk of unauthorized vehicle use.

Your immobilizer system is comprised of a small transponder in the ignition key and electronic devices inside the vehicle.

With the immobilizer system, whenever you insert your ignition key into the ignition switch and turn it to ON, it checks to verify if the ignition key is valid.

If the key is determined to be valid, the engine will start.

If the key is determined to be invalid, the engine will not start.

**To activate the immobilizer system:**

Turn the ignition key to the OFF position. The immobilizer system activates automatically. Without a valid ignition key for your vehicle, the engine will not start.

**To deactivate the immobilizer system:**

Insert the ignition key into the key cylinder and turn it to the ON position.

**NOTICE**

When starting the engine, do not use the key with other immobilizer keys around. Otherwise the engine may not start or may stop soon after it starts. Keep each key separate in order to avoid a starting malfunction.

**⚠️ CAUTION**

*Do not put metal accessories near the ignition switch.*

Metal accessories may interrupt the transponder signal and may prevent the engine from being started.

**NOTICE**

If you need additional keys or lose your keys, contact an authorized HYUNDAI dealer.
Features of your vehicle

⚠️ CAUTION

The transponder in your ignition key is an important part of the immobilizer system. It is designed to give years of trouble-free service, however you should avoid exposure to moisture, static electricity and rough handling. Immobilizer system malfunction could occur.

⚠️ CAUTION

Do not change, alter or adjust the immobilizer system because it could cause the immobilizer system to malfunction and should only be serviced by an authorized HYUNDAI dealer. Malfunctions caused by improper alterations, adjustments or modifications to the immobilizer system are not covered by your vehicle manufacturer warranty.

This device complies with Part 15 of the FCC rules.
Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

⚠️ CAUTION

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment. If the keyless entry system is inoperative due to changes or modifications not approved by the party responsible for compliance, it will not be covered by your manufacturer’s vehicle warranty.
Features of your vehicle

SMART KEY

Record your key number

The key code number is stamped or printed on the key code tag attached to the key set. Should you lose your keys, this number will enable an authorized HYUNDAI dealer to duplicate the keys easily.

Remove the key code tag and store it in a safe place. Also, record the code number and keep it in a safe and handy place, but not in the vehicle.

Smart key function

To remove the mechanical key, press and hold the release button (1) and remove the mechanical key (2).

To reinstall the mechanical key, put the key into the hole and push it until a click sound is heard.

With a smart key, you can lock or unlock a door (and Liftgate (tailgate)) and start the engine.

Refer to the following for more details.

⚠️ WARNING - Smart key

Leaving children unattended in a vehicle with the smart key is dangerous even if the Engine Start/Stop Button is in the ACC or ON position. Children could accidentally press the Engine Start/Stop Button.

The smart key would enable children to operate power windows or other controls, or even make the vehicle move, which could result in serious bodily injury or even death. Never leave the keys in your vehicle with unsupervised children, when the Engine is running.
Using the door handle button
1. Carry the smart key.
2. Close all doors, engine hood and liftgate (tailgate).

Using the button on the smart key
1. Close all doors, engine hood and liftgate (tailgate).
2. Press the lock button (1).
3. The hazard warning lights will blink and the chime will sound once.
4. Make sure that doors are locked by pulling the outside door handle.

**NOTICE**
- The button will only operate when the smart key is within 28~40in. (0.7~1m) from the outside door handle.
- Even though you press the outside door handle button, the doors will not lock and the chime will sound for 3 seconds if any of the following occur:
  - The smart key is in the vehicle.
  - The engine start/stop button is in ACC or ON position.
  - Any door except the liftgate (tailgate) is open.
Unlocking

Using the door handle button
1. Carry the smart key.
2. Press the button of the driver's outside door handle.
3. The driver's door will unlock. The hazard warning lights will blink and the chime will sound two times.
4. Press the button twice within 4 seconds and all doors and the liftgate (tailgate) will unlock and the hazard warning lights will blink and the chime will sound two times.

* NOTICE
- The button will only operate when the smart key is within 28~40in. (0.7~1m) from the outside door handle.
- When the smart key is recognized in the area of 28~40in. (0.7~1m) from the front outside door handle, other people can also open the doors.
- After unlocking the driver's door or all doors, the door(s) will lock automatically unless the door is opened.

✽✽ NOTICE
After pressing the button, the doors will lock automatically unless any door is opened within 30 seconds.

* NOTICE
You can activate or deactivate the Two Turn Unlock function. Refer to "User settings" in this section.

Using the button on the smart key
1. Press the unlock button(2) of the smart key.
2. The driver's door will unlock. The hazard warning lights will blink and the chime will sound two times.
3. Press the unlock button(2) twice within 4 seconds and all doors and the liftgate (tailgate) will unlock. The hazard warning lights will blink and the chime will sound two times.

* NOTICE
- If you press the button of the front passenger's outside door handle while carrying the smart key, all doors will unlock.
**Liftgate (Tailgate) unlocking**

**Using the liftgate (tailgate) handle button**
1. Carry the smart key.
2. Press the liftgate (tailgate) handle button.
3. When all doors are locked, the hazard warning lights will blink two times.
   Once the liftgate (tailgate) is opened and then closed, the liftgate (tailgate) will lock automatically.

*NOTICE*

The button will only operate when the smart key is within 28~40 in. (0.7~1 m) from the liftgate (tailgate) handle.

**Using the button on the smart key**
1. Press the liftgate (tailgate) unlock button(3) for more than 1 second.
2. When all doors are locked, the hazard warning lights will blink two times.

**Panic**
1. Press the panic button(4) for more than 1 second.
2. The horn sounds and hazard warning light flash for about 30 seconds.

*NOTICE*

To stop the horn and lights, press any button on the smart key.

**Start-up**

You can start the engine without inserting the key. For detailed information refer to the “Engine start/stop button” in section 5.

**Loss of the smart key**

A maximum of 2 smart keys can be registered to a single vehicle. Care should be taken not to lose your smart key. You will not be able to start the engine without the smart key in the vehicle. If you happen to lose your smart key, and don’t have the spare key, you will not be able to start the engine. You should get the vehicle to your authorized HYUNDAI dealer (tow the vehicle, if necessary) in order to protect it from potential theft.
Smart key precautions

- The smart key will not work if any of the following occur:
  - The smart key is close to a radio transmitter such as a radio station or an airport which can interfere with normal operation of the smart key.
  - The smart key is near a mobile two-way radio system or a cellular phone.
  - Another vehicle's smart key is being operated close to your vehicle.
- When the smart key does not work correctly, open and close the door with the mechanical key and contact an authorized HYUNDAI dealer.

- If the smart key is in close proximity to your cell phone or smart phone, the signal from the smart key could be blocked by normal operation of your cell phone or smart phone. This is especially important when the phone is active such as making a call, receiving calls, text messaging, and/or sending/receiving emails. Avoid placing the smart key and your cell phone or smart phone in the same pants or jacket pocket and maintain adequate distance between the two devices.

Smart key immobilizer system

Your vehicle is equipped with an electronic engine immobilizer system to reduce the risk of unauthorized vehicle use.

Your immobilizer system is comprised of a small transponder in the smart key and electronic devices inside the vehicle.

With the immobilizer system, whenever you turn the engine start/stop button to the ON position by pressing the button while carrying the smart key, it verifies if the smart key is valid or not.

- If the key is determined to be valid, the engine will start.
- If the key is determined to be invalid, the engine will not start.

⚠️ CAUTION

Keep the smart key away from water or any liquid and fire. If the inside of the smart key gets damp (due to drinks or moisture), or is heated, internal circuit may malfunction.
To deactivate the immobilizer system:
Turn the engine start/stop button to the ON position by pressing the button while carrying the smart key.

To activate the immobilizer system:
Turn the engine start/stop button to the OFF position. The immobilizer system activates automatically. Without a valid smart key for your vehicle, the engine will not start.

**CAUTION**
In order to prevent theft of your vehicle, do not leave spare keys anywhere in your vehicle. Your Immobilizer password is a customer unique password and should be kept confidential. Do not leave this number anywhere in your vehicle.

**NOTICE**
When starting the engine, do not use the key with other immobilizer keys around. Otherwise the engine may not start or may stop soon after it starts. Keep each key separate in order to avoid a starting malfunction.

**CAUTION**
The transponder in your smart key is an important part of the immobilizer system. It is designed to give years of trouble-free service, however you should avoid exposure to moisture, static electricity and rough handling. Immobilizer system malfunction could occur.

**CAUTION**
Do not put metal accessories near the smart key.
The engine may not start because the metal accessories may interrupt the transponder signal from transmitting normally.

**NOTICE**
If you need additional keys or lose your keys, contact an authorized HYUNDAI dealer.

**CAUTION**
Do not change, alter or adjust the immobilizer system because it could cause the immobilizer system to malfunction and should only be serviced by an authorized HYUNDAI dealer. Malfunctions caused by improper alterations, adjustments or modifications to the immobilizer system are not covered by your vehicle manufacturer warranty.
This device complies with Part 15 of the FCC rules.
Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Battery replacement
A smart key battery should last for several years, but if the smart key is not working properly, try replacing the battery with a new one. If you are unsure how to use your smart key or replace the battery, contact an authorized HYUNDAI dealer.

1. Remove the mechanical key.
2. Pry open the rear cover.
3. Replace the battery with a new battery (CR2032). When replacing the battery, make sure the battery position.
4. Install the battery in the reverse order of removal.

The smart key is designed to give you years of trouble-free use, however it can malfunction if exposed to moisture or static electricity. If you are unsure how to use or replace the battery, contact an authorized HYUNDAI dealer.

• Using the wrong battery can cause the smart key to malfunction. Be sure to use the correct battery.
• To avoid damaging the smart key, don't drop it, get it wet, or expose it to excessive heat or sunlight.

• An inappropriately disposed battery can be harmful to the environment and human health. Dispose the battery according to your local law(s) or regulation.

CAUTION - Smart key damage
Do not drop, get wet or expose the smart key to excessive heat or sunlight, or it will be damaged.
THEFT-ALARM SYSTEM (IF EQUIPPED)

Features of your vehicle

Armed stage

Using the smart key (if equipped)

Park the vehicle and stop the engine. Arm the system as described below.

1. Turn off the engine.
2. Make sure that all doors, the engine hood and liftgate (tailgate) lid are closed and latched.
3. Lock the doors by pressing the button of the front outside door handle with the smart key in your possession.

After completion of the steps above, the hazard warning lights and chime will operate once to indicate that the system is armed.

If any door remains open, the doors won't lock and the chime will sound for 3 seconds. Close the door and try again to lock the doors.

If the liftgate (tailgate) hatch or the engine hood remains open, the hazard warning lights and the chime won't operate, and the theft alarm will not arm. After you close the liftgate (tailgate) and engine hood, the hazard warning lights blink once.

Disarmed stage

Theft-alarm stage

Armed stage

Features of your vehicle

This system is designed to provide protection from unauthorized entry into the vehicle. This system is operated in three stages: the first is the "Armed" stage, the second is the "Theft-alarm" stage, and the third is the "Disarmed" stage. If triggered, the system provides an audible alarm with blinking of the hazard warning lights.

Lock the doors by pressing the lock button on the smart key.

After completion of the steps above, the hazard warning lights and chime will operate once to indicate that the system is armed.

If any door, liftgate (tailgate) or engine hood remains open, the hazard warning lights and chime won't operate and the theft-alarm will not arm. After you close the liftgate (tailgate) and engine hood, the hazard warning lights blink once.
Using the transmitter (if equipped)
Park the vehicle and stop the engine. Arm the system as described below.
1. Turn off the engine and remove the ignition key from the ignition switch.
2. Make sure that all doors, the engine hood and liftgate (tailgate) are closed and latched.
3. Lock the doors by pressing the lock button on the transmitter.
After completion of the steps above, the hazard warning lights will blink once to indicate that the system is armed.
If any door, liftgate (tailgate) or engine hood remains open, the hazard warning lights won't operate and theft-alarm will not arm. After you close all doors, liftgate (tailgate) and engine hood, the hazard warning lights blink once.

Using the mechanical key
Park the vehicle and stop the engine. Arm the system as described below.
1. Turn off the engine and remove the key from the ignition switch (if equipped).
2. Make sure that all doors, the engine hood and liftgate (tailgate) are closed and latched.
3. Lock the doors by inserting the key into the key hole on the front outside door handle and turning the key toward the rear of the vehicle.
If any door, liftgate (tailgate) or engine hood remains open, the theft-alarm will not arm.

* NOTICE
If you lock or unlock the doors by using the mechanical key, the hazard warning light won't operate.

Do not arm the system until all passengers have left the vehicle. If the system is armed while a passenger(s) remains in the vehicle, the alarm may be activated when the remaining passenger(s) leave the vehicle. If any door (or trunk) or engine hood is opened within 30 seconds after the system enters the armed stage, the system is disarmed to prevent an unnecessary alarm.
Theft-alarm stage
The alarm will be activated if any of the following occurs while the system is armed.
- A door is opened without using the transmitter, smart key or mechanical key.
- The liftgate (tailgate) is opened without using the transmitter or smart key.
- The engine hood is opened.
The horn will sound and the hazard warning lights will blink continuously for approximately 30 seconds. The alarm will repeat once more unless the system is disarmed. To turn off the system, unlock the doors with the mechanical key or transmitter or smart key.

Disarmed stage

Using the smart key (if equipped)
The system will be disarmed when the doors are unlocked by pressing the unlock button on the smart key or pressing the lock/unlock button of the front outside door handle with the smart key in your possession.
After unlocking the doors, the hazard warning lights and chime will operate twice to indicate that the system is disarmed.
After unlocking the doors, if any door is not opened within 30 seconds, the system will be rearmed.

Using the transmitter (if equipped)
The system will be disarmed when the doors are unlocked by pressing the unlock button on the transmitter.
After unlocking the doors, the hazard warning lights will blink twice to indicate that the system is disarmed.
After unlocking the doors, if any door is not opened within 30 seconds, the system will be rearmed.

Using the mechanical key
The system will be disarmed when the doors are unlocked with the mechanical key.

* NOTICE
If you lock or unlock the doors by using the mechanical key, the hazard warning light and chime sound won't operate.
NOTICE
• Avoid trying to start the engine while the alarm is activated. The vehicle starting motor is disabled during the theft-alarm stage.
• If you lose your keys, contact your authorized HYUNDAI dealer.

CAUTION
Do not change, alter or adjust the theft-alarm system because it could cause the theft-alarm system to malfunction and should only be serviced by an authorized Hyundai dealer. Malfunctions caused by improper alterations, adjustments or modifications to the theft-alarm system are not covered by your vehicle manufacturer warranty.
DOOR LOCKS

Operating door locks from outside the vehicle

Using the folding key (if equipped)

- Doors can be locked and unlocked by pressing the lock button(1) and unlock button(2) on the folding key.

Once the doors are unlocked, they may be opened by pulling the door handle. When closing the door, push the door by hand. Make sure that doors are closed securely.

For more detailed information, refer to "Folding key" in this section.

Using the smart key (if equipped)

- Doors can be locked and unlocked by pressing the button of the outside door handle with the smart key in your possession.

- Doors can be locked and unlocked by pressing the lock button(1) and unlock button(2) on the smart key.

Once the doors are unlocked, they may be opened by pulling the door handle. When closing the door, push the door by hand. Make sure that doors are closed securely.

For more detailed information, refer to “Smart key” in this section.
Using the mechanical key in an emergency situation

If the smart key or folding key does not operate normally, you can lock or unlock the doors as follows:
1. Unfold the folding key or remove the mechanical key from the smart key.
2. Insert the key into the hole of the outside door handle. Turn the key toward the front of the vehicle to unlock and toward the rear of the vehicle to lock.

**NOTICE**
- In cold and wet climates, door locks and door mechanisms may not work properly due to freezing conditions.
- If the door is locked/unlocked multiple times in rapid succession with either the vehicle key or door lock switch, the system may stop operating temporarily in order to protect the circuit and prevent damage to system components.

**WARNING**
- If you don't close the door securely, the door may open again.
- Be careful that someone's body and hands are not trapped when closing the door.

**NOTICE**
You can activate or deactivate the Tow Turn Unlock function. Refer to "User Settings" in this section.
Operating door locks from inside the vehicle

Door lock button

- To unlock a door, push the door lock button(1) to the “Unlock” position. The red mark (2) on the button will be visible.
- To lock a door, push the door lock button(1) to the “Lock” position. If the door is locked properly, the red mark (2) on the button will not be visible.
- To open a door, pull the door handle (3) outward.

- If the inner door handle on either front door is pulled when the door lock button is in the locked position, the door will unlock and open.
- The front door cannot be locked if the ignition key is in the ignition switch and the door is open.
- The door cannot be locked if the smart key is in the vehicle and any door is open.

If a power door lock ever fails to function while you are in the vehicle, try one or more of the following:

- Operate the door unlock feature repeatedly (both electronic and manual) while simultaneously pulling on the door handle.
- Operate the other door locks and handles, front and rear.
- Lower a front window and use the key to unlock the door from outside.

Central door lock switch

Operate by depressing the central door lock switch.
- When pushing down the lock switch (1), all vehicle doors will lock.
Features of your vehicle

- When pushing down the lock release switch (2), all vehicle doors will unlock.
- If the key is in the ignition switch and front door is open, the doors will not lock even though the central door lock switch (1) is pressed.
- If the smart key is in the vehicle and any door is open, the doors will not lock even though the central door lock switch (1) is pressed.

⚠️ WARNING - Doors
- The doors should always be fully closed and locked while the vehicle is in motion to prevent accidental opening of the door. Locked doors will also discourage potential intruders when the vehicle stops or slows.
- Be careful when opening doors and watch for vehicles, motorcycles, bicycles or pedestrians approaching the vehicle in the path of the door. Opening a door when something is approaching can cause damage or injury.

⚠️ WARNING - Unlocked vehicles
Leaving your vehicle unlocked can invite theft or possible harm to you or others from someone hiding in your vehicle while you are gone. Always remove the ignition key, engage the parking brake, close all windows and lock all doors when leaving your vehicle unattended.

⚠️ WARNING - Unattended children
An enclosed vehicle can become extremely hot, causing death or severe injury to unattended children or animals who cannot escape the vehicle. Furthermore, children might operate features of the vehicle that could injure them, or they could encounter other harm, possibly from someone gaining entry to the vehicle. Never leave children or animals unattended in your vehicle.
**Impact sensing door unlock system**

All doors will be automatically unlocked if an impact or collision is detected by the impact sensors while the ignition switch is ON. However, the doors may not be unlocked if mechanical problems occur with the door lock system or battery.

**NOTICE**

You can select some auto door lock/unlock features in “User Settings” as follows:
- Speed sensing auto door lock
- Auto door unlock when the ignition key is removed from the ignition switch or engine is turned off.
- Auto door lock/unlock by shifting the shift lever out of P(Park) or into P(Park).

For more information, refer to “User Settings” in this section.

**Child-protector rear door lock**

The child safety lock is provided to help prevent children from accidentally opening the rear doors from inside the vehicle. The rear door safety locks should be used whenever children are in the vehicle.

1. Open the rear door.
2. Insert a key (or screwdriver) into the hole (1) and turn it to the lock (achteck) position. When the child safety lock is in the lock position, the rear door will not open even when the inner door handle is pulled.

3. Close the rear door.

To open the rear door, pull the outside door handle.

Even though the doors are unlocked, the rear door will not open by pulling the inner door handle until the rear door child safety lock is unlocked.

**WARNING - Rear door locks**

If children accidentally open the rear doors while the vehicle is in motion, they could fall out of the vehicle, resulting in severe injury or death. To prevent children from opening the rear doors from the inside, the rear door safety locks should be used whenever children are in the vehicle.
Features of your vehicle

LIFTGATE (TAILGATE)

Non-powered liftgate (tailgate)

Opening the liftgate (tailgate)

- The liftgate (tailgate) is locked or unlocked when all doors are locked or unlocked with either the key, the transmitter, the smart key, or the central door lock switch.
- If unlocked, the liftgate (tailgate) can be opened by pressing the handle switch and pulling the handle up.

- Only the liftgate (tailgate) is unlocked if the liftgate (tailgate) unlock button on the transmitter or smart key is pressed for about 1 second, or the liftgate (tailgate) handle button is pressed when the smart key is detected.

**NOTICE**

In cold and wet climates, door lock and door mechanisms may not work properly due to freezing conditions.

**WARNING**

The liftgate (tailgate) swings upward. Make sure no objects or people are near the rear of the vehicle when opening the liftgate (tailgate).

**CAUTION**

Make certain that you close the liftgate (tailgate) before driving your vehicle. Possible damage may occur to the liftgate (tailgate) lift cylinders and attached hardware if the liftgate (tailgate) is not closed prior to driving.
Features of your vehicle

Closing the liftgate (tailgate)

To close the liftgate (tailgate), lower and push down the liftgate (tailgate) firmly. Make sure that the liftgate (tailgate) is securely latched.

⚠️ WARNING - Exhaust fumes
If you drive with the liftgate (tailgate) open, you will draw dangerous exhaust fumes into your vehicle which can cause serious injury or death to vehicle occupants. If you must drive with the liftgate (tailgate) open, keep the air vents and all windows open so that additional outside air comes into the vehicle.

⚠️ WARNING - Rear cargo area
Occupants should never ride in the rear cargo area where no restraints are available. To avoid injury in the event of an accident or sudden stops, occupants should always be properly restrained.
Features of your vehicle

Power liftgate (Power tailgate) (if equipped)

(1) Power liftgate (Power tailgate) open/close button
(2) Power liftgate (Power tailgate) handle switch
(3) Power liftgate (Power tailgate) inner switch

**NOTICE**

When the engine is not running, the power liftgate (power tailgate) can be operated regardless of gear position. However, if ignition switch is ON position, the power liftgate (power tailgate) can operate when the automatic shift lever is in P (Park).

**WARNING**

Never leave children or animals unattended in your vehicle. Children or animals might operate the power liftgate (power tailgate) that could result in injury to themselves or others, or damage the vehicle.

**WARNING**

Make sure there are no people or objects around the power liftgate (power tailgate) before operating the power liftgate (power tailgate). Wait until the liftgate (tailgate) is opened fully and stopped before loading or unloading cargo or passengers from the vehicle.
CAUTION
Do not close or open the power liftgate (power tailgate) manually. This may cause damage to the power liftgate (power tailgate). If it is necessary to close or open the power liftgate (power tailgate) manually when the battery is discharged or disconnected, do not apply excessive force.

Opening the liftgate (tailgate)

The power liftgate (power tailgate) will open automatically by doing one of the following:
- Press the liftgate (tailgate) unlock button on the transmitter or smart key for approximately one second.
- Press the power liftgate (power tailgate) open button for approximately one second.

For emergency stop while operating, press the power liftgate (power tailgate) open button shortly.
• Press the liftgate (tailgate) handle switch carrying the smart key with you.

**Closing the liftgate (tailgate)**

For emergency stop while operating, press the power liftgate (power tailgate) close button shortly.

• Press the power liftgate (power tailgate) close button for approximately one second when the liftgate (tailgate) is opened. The liftgate (tailgate) will close and lock automatically.
Features of your vehicle

- Press the power liftgate (power tailgate) inner switch for approximately one second when the liftgate (tailgate) is opened. The liftgate (tailgate) will close and lock automatically.

Power liftgate (Power tailgate) non-opening conditions

The power liftgate (power tailgate) will not open or close automatically, when the vehicle is moving more than 2 mph (3 km/h).

⚠️ WARNING

The chime will sound continuously if you drive over 2 mph (3 km/h) with the liftgate (tailgate) opened. Stop your vehicle immediately at a safe place and check if your liftgate (tailgate) is opened.

⚠️ CAUTION

Operating the Power liftgate (Power tailgate) more than 5 times continuously could cause damages to the operating motor. In this case, the system enters into a thermal protection mode. In thermal protection mode, the Power liftgate (Power tailgate) can not operate and the chime will sound for 3 times by any switch inputs. Leave your Power liftgate (Power tailgate) system for rest about 1 minute and then operate.
NOTICE

• The power liftgate (power tailgate) can be operated when the engine is not running. However, the power liftgate (power tailgate) operation consumes large amounts of vehicle electric power. To prevent the battery from being discharged, do not operate it excessively.
• To prevent the battery from being discharged, do not leave the power liftgate (power tailgate) in the open position for a long time.
• Do not modify or repair any part of the power liftgate (power tailgate) by yourself. This must be done by an authorized HYUNDAI dealer.
• When jacking up the vehicle to change a tire or repair the vehicle, do not operate the power liftgate (power tailgate). This could cause the power liftgate (power tailgate) to operate improperly.
• In cold and wet climates, the power liftgate (power tailgate) may not work properly due to freezing conditions.

Automatic reversal

During power opening and closing if the power liftgate (power tailgate) is blocked by an object or part of the body, the power liftgate (power tailgate) will detect the resistance.
• If the resistance is detected while opening the liftgate (tailgate), it will stop and move in the opposite direction.
• If the resistance is detected while closing the liftgate (tailgate), it will stop and move in the opposite direction.

However, if the resistance is weak such as from an object that is thin or soft, or the liftgate (tailgate) is near the latched position, the automatic stop and reversal may not detect the resistance.

If the automatic reversal feature operates continuously more than twice during opening or closing operation, the power liftgate (power tailgate) may stop at that position. At this time, close the liftgate (tailgate) manually and operate the liftgate (tailgate) automatically again.
**WARNING**

Never intentionally place any object or part of your body in the path of the power liftgate (power tailgate) to make sure the automatic reversal operates.

**CAUTION**

*Do not put heavy items on the power liftgate (power tailgate) before you operate the power liftgate (power tailgate). Additional weight on liftgate (tailgate) could cause damages to the system.*

---

**How to reset the power liftgate (power tailgate)**

If the battery has been discharged or disconnected, or if the related fuse has been replaced or disconnected, for the power liftgate (power tailgate) to operate normally, reset the power liftgate (power tailgate) as follow:

1. Put the shift lever in P (Park).
2. While pressing the liftgate (tailgate) inner switch, press the liftgate (tailgate) handle switch for more than 3 seconds. (the chime will sound)
3. Close the liftgate (tailgate) manually.

If the power liftgate (power tailgate) does not work properly after the above procedure, have the system checked by an authorized HYUNDAI dealer.

*NOTICE*

If the power liftgate (power tailgate) does not operate normally, check again if the gear position is in right position.

---

**Power liftgate (Power tailgate) opening height user setting**

The driver may set the height of a fully opened liftgate (tailgate) by following the below instruction.

1. Position the liftgate (tailgate) manually to the height you prefer.
2. Press the liftgate (tailgate) inner switch for more than 3 seconds.
3. Close the liftgate (tailgate) manually after hearing the buzzer sound.

The liftgate (tailgate) will open to the height the driver has set up.
WARNING - Exhaust fumes
If you drive with the liftgate (tailgate) open, you will draw dangerous exhaust fumes into your vehicle which can cause serious injury or death to vehicle occupants. If you must drive with the liftgate (tailgate) open, keep the air vents and all windows open so that additional outside air comes into the vehicle.

WARNING - Rear cargo area
Occupants should never ride in the rear cargo area where no restraints are available. To avoid injury in the event of an accident or sudden stops, occupants should always be properly restrained.

Smart Liftgate (Smart Tailgate) (if equipped)
On the vehicle equipped with a smart key, the liftgate (tailgate) can be opened with no-touch activation using the Smart Liftgate (Smart Tailgate) system.

How to use the Smart Liftgate (Smart Tailgate)
The liftgate (tailgate) can be opened with no-touch activation satisfying all the conditions below.
• After 15 seconds when all doors are closed and locked
• Positioned in the detecting area for more than 3 seconds.

NOTICE
• The Smart Liftgate (Smart Tailgate) does not operate when:
  - The smart key is detected within 15 seconds after the doors are closed and locked, and is continuously detected.
  - The smart key is detected within 15 seconds after the doors are closed and locked, and 60 inches (1.5 m) from the front door handles. (for vehicles equipped with Welcome Light)
  - A door is not locked or closed.
  - The smart key is in the vehicle.

WARNING - Exhaust fumes
If you drive with the liftgate (tailgate) open, you will draw dangerous exhaust fumes into your vehicle which can cause serious injury or death to vehicle occupants. If you must drive with the liftgate (tailgate) open, keep the air vents and all windows open so that additional outside air comes into the vehicle.

WARNING - Rear cargo area
Occupants should never ride in the rear cargo area where no restraints are available. To avoid injury in the event of an accident or sudden stops, occupants should always be properly restrained.
1. Setting
To activate the Smart Liftgate (Smart Tailgate), go to User Settings Mode and select Smart Liftgate (Smart Tailgate) on the LCD display.

※ For more details, refer to ”LCD display” in this chapter.

2. Detect and Alert
If you are positioned in the detecting area (20~40 inches (50~100 cm) behind the vehicle) carrying a smart key, the hazard warning lights will blink and chime will sound for about 3 seconds to alert you the smart key has been detected and the liftgate (tailgate) will open.

※ NOTICE
Do not approach the detecting area if you do not want the liftgate (tailgate) to open. If you have unintentionally entered the detecting area and the hazard warning lights and chime starts to operate, leave the detecting area with the smart key. The liftgate (tailgate) will stay closed.
3. Automatic opening
The hazard warning lights will blink and chime will sound 2 times and then the liftgate (tailgate) will slowly open.

WARNING
- Make certain that you close the liftgate (tailgate) before driving your vehicle.
- Make sure there are no people or objects around the liftgate (tailgate) before opening or closing the liftgate (tailgate).
- Make sure objects in the rear cargo area do not come out when opening the liftgate (tailgate) on the slope way. It may cause serious injury.
- Make sure to deactivate the Smart Liftgate (Smart Tailgate) function when washing your vehicle. Otherwise, the liftgate (tailgate) may open inadvertently.
- The key should be kept out of reach of children. Children may inadvertently open the Smart Liftgate (Smart Tailgate) while playing around the rear area of the vehicle.

How to deactivate the Smart Liftgate (Smart Tailgate) function using the smart key

1. Door lock
2. Door unlock
3. Liftgate (Tailgate) open
4. Panic

If you press any button of the smart key during the Detect and Alert stage, the Smart Liftgate (Smart Tailgate) function will be deactivated. Make sure to be aware of how to deactivate the Smart Liftgate (Smart Tailgate) function for emergency situations.
NOTICE

- If you press the door unlock button (2), the Smart Liftgate (Smart Tailgate) function will be deactivated temporarily. But, if you do not open any door for 30 seconds, the Smart Liftgate (Smart Tailgate) function will be activated again.
- If you press the liftgate (tailgate) open button (3) for more than 1 second, the liftgate (tailgate) opens.
- If you press the door lock button (1) or liftgate (tailgate) open button (3) when the Smart Liftgate (Smart Tailgate) function is not in the Detect and Alert stage, the Smart Liftgate (Smart Tailgate) function will not be deactivated.
- In case you have deactivated the Smart Liftgate (Smart Tailgate) function by pressing the smart key button and opened a door, the Smart Liftgate (Smart Tailgate) function can be activated again by closing and locking all doors.

Detecting area

- The Smart Liftgate (Smart Tailgate) operates with a welcome alert if the smart key is detected within 20~40 inches (50~100 cm) from the liftgate (tailgate).
- The alert stops at once if the smart key is positioned outside the detecting area during the Detect and Alert stage.

NOTICE

- The Smart Liftgate (Smart Tailgate) function will not work if any of the following occurs:
  - The smart key is close to a radio transmitter such as a radio station or an airport which can interfere with normal operation of the transmitter.
  - The smart key is near a mobile two way radio system or a cellular phone.
  - Another vehicle's smart key is being operated close to your vehicle.
- The detecting range may decrease or increase when:
  - One side of the tire is raised to replace a tire or to inspect the vehicle.
  - The vehicle is slantingly parked on a slope or unpaved road, etc.
Emergency liftgate (tailgate) safety release

Your vehicle is equipped with the emergency liftgate (tailgate) safety release lever located on the bottom of the liftgate (tailgate). When someone is inadvertently locked in the luggage compartment, the liftgate (tailgate) can be opened by doing as follows:

1. Remove the cover.
2. Push the release lever to the right.
3. Push up the liftgate (tailgate).

WARNING

- For emergencies, be fully aware of the location of the emergency liftgate (tailgate) safety release lever in this vehicle and how to open the liftgate (tailgate) if you are accidentally locked in the luggage compartment.

- No one should be allowed to occupy the luggage compartment of the vehicle at any time. The luggage compartment is a very dangerous location in the event of a crash.

- Use the release lever for emergencies only. Use extreme caution, especially while the vehicle is in motion.
(1) Driver's door power window switch
(2) Front passenger's door power window switch
(3) Rear door (left) power window switch
(4) Rear door (right) power window switch
(5) Window opening and closing
(6) Automatic power window up/down
(7) Power window lock switch

* NOTICE
In cold and wet climates, power windows may not work properly due to freezing conditions.
Power windows
The ignition switch must be in the ON position for power windows to operate. Each door has a power window switch that controls that door's window. The driver has a power window lock switch which can block the operation of passenger windows. The driver's door has a master power window switch that controls all the windows in the vehicle. The power windows can be operated for approximately 30 seconds after the ignition key is removed or turned to the ACC or LOCK position. However, if the front doors open, the power windows cannot be operated within the 30 second period.

NOTICE
While driving with the rear windows down or with the sunroof (if equipped) in an open (or partially open) position, your vehicle may demonstrate a wind buffeting or pulsation noise. This noise is a normal occurrence and can be reduced or eliminated by taking the following actions. If the noise occurs with one or both of the rear windows down, partially lower both front windows approximately one inch. If you experience the noise with the sunroof open, slightly reduce the size of the sunroof opening.

To open or close a window, press down or pull up the front portion of the corresponding switch to the first detent position (5).
**Auto up/down window (front seat) (if equipped)**

Pressing down or pulling up the power window switch momentarily to the second detent position (6) completely lowers or lifts the window even when the switch is released. To stop the window at the desired position while the window is in operation, momentarily pull or push the switch in the direction opposite of the window’s movement.

If the power window is not operated correctly, the automatic power window system must be reset as follows:

1. Turn the ignition switch to the ON position.
2. Close windows and continue pulling up on the power window switch for at least 1 second after the window is completely closed.

**Automatic reversal**

If the upward movement of the window is blocked by an object or part of the body, the window will detect the resistance and will stop upward movement. The window will then lower approximately 11.8 in. (30 cm) to allow the object to be cleared.
If the window detects the resistance while the power window switch is pulled up continuously, the window will stop upward movement then lower approximately 1 in. (2.5 cm). If the power window switch is pulled up continuously again within 5 seconds after the window is lowered by the automatic window reversal feature, the automatic window reversal will not operate.

**NOTICE**
The automatic reverse feature for the driver’s window is only active when the “auto up” feature is used by fully pulling up the switch. The automatic reverse feature will not operate if the window is raised using the halfway position on the power window switch.

**WARNING**
 Always check for obstructions before raising any window to avoid injuries or vehicle damage. If an object less than 0.16 in. (4 mm) in diameter is caught between the window glass and the upper window channel, the automatic reverse window may not detect the resistance and will not stop and reverse direction.

**Power window lock button**

The driver can disable the power window switches on the rear passengers’ doors by pressing the power window lock switch to the lock position (pressed).

When the power window lock switch is pressed:
- The driver’s master control can operate all the power windows.
- The front passenger’s control can operate the front passenger’s power window.
- The rear passenger’s control cannot operate the rear passenger’s power window.
**CAUTION**

- To prevent possible damage to the power window system, do not open or close two windows or more at the same time. This will also ensure the longevity of the fuse.
- Never try to operate the main switch on the driver's door and the individual door window switch in opposing directions at the same time. If this is done, the window will stop and cannot be opened or closed.

**WARNING - Windows**

- NEVER leave the keys in your vehicle with unattended children, when the engine is running.
- NEVER leave any child unattended in the vehicle. Even very young children may inadvertently cause the vehicle to move, entangle themselves in the windows, or otherwise injure themselves or others.
- Always double check to make sure all arms, hands, head and other obstructions are safely out of the way before closing a window.
- Do not allow children to play with the power windows. Keep the driver's door power window lock switch in the LOCK position (depressed). Serious injury can result from unintentional window operation by the child.
- Do not extend any head or arms outside through the window opening while driving.
Features of your vehicle

HOOD
Opening the hood

1. Pull the release lever to unlatch the hood. The hood should pop open slightly.

**WARNING**
Open the hood after turning off the engine on a flat surface, shifting the shift lever to the P(Park) position, and setting the parking brake.

2. Go to the front of the vehicle, raise the hood slightly, pull the secondary latch (1) inside of the hood up and lift the hood (2).

3. Raise the hood. It will raise completely by itself after it has been raised about halfway.

**WARNING**
When you check the engine compartment, please make sure your head is not injured by the hood safety hook which is located inside of the hood.
Closing the hood

1. Before closing the hood, check the following:
   • All filler caps in engine compartment must be correctly installed.
   • Gloves, rags or any other combustible material must be removed from the engine compartment.

2. Lower the hood halfway and push down to securely lock in place.

WARNING

• Before closing the hood, ensure that all obstructions are removed from the hood opening. Closing the hood with an obstruction present in the hood opening may result in property damage or severe personal injury.

• Do not leave gloves, rags or any other combustible material in the engine compartment. Doing so may cause a heat-induced fire.

• Always double check to be sure that the hood is firmly latched before driving away. If it is not latched, the hood could open while the vehicle is being driven, causing a total loss of visibility, which might result in an accident.

• Do not move the vehicle with the hood in the raised position, as vision is obstructed and the hood could fall or be damaged.
Features of your vehicle

FUEL FILLER DOOR

Opening the fuel filler door

The fuel filler door must be opened from inside the vehicle by pulling the fuel filler door opener lever located on the driver's door.

*NOTICE*

If the fuel filler door will not open because ice has formed around it, tap lightly or push on the door to break the ice and release the door. Do not pry on the door. If necessary, spray around the door with an approved de-icer fluid (do not use radiator anti-freeze) or move the vehicle to a warm place and allow the ice to melt.

1. Stop the engine.
2. Pull the fuel filler door opener lever, then the fuel filler door will pop up.
3. Pull the fuel filler door (1) out to fully open.
4. To remove the cap, turn the fuel tank cap (2) counterclockwise.
5. Refuel as needed.

Closing the fuel filler door

1. To install the cap, turn it clockwise until it clicks one time. This indicates that the cap is securely tightened.
2. Close the fuel filler door and push it in lightly making sure that it is securely closed.
WARNING - Refueling

If pressurized fuel sprays out, it can cover your clothes or skin and thus subject you to the risk of fire and burns. Always remove the fuel cap carefully and slowly. If the cap is venting fuel or if you hear a hissing sound, wait until the condition stops before completely removing the cap.

Do not "top off" after the nozzle automatically shuts off when refueling.

Always check that the fuel cap is installed securely to prevent fuel spillage in the event of an accident.

WARNING - Refueling dangers

Automotive fuels are flammable materials. When refueling, please note the following guidelines carefully. Failure to follow these guidelines may result in severe personal injury, severe burns or death by fire or explosion.

- Read and follow all warnings posted at the gas station facility.
- Before refueling, note the location of the Emergency Gasoline Shut-Off, if available, at the gas station facility.
- Before touching the fuel nozzle, you should eliminate potentially dangerous static electricity discharge by touching another metal part of the vehicle, a safe distance away from the fuel filler neck, nozzle, or other gas source.

(Continued)

Do not get back into a vehicle once you have begun refueling since you can generate static electricity by touching, rubbing or sliding against any item or fabric (polyester, satin, nylon, etc.) capable of producing static electricity. Static electricity discharge can ignite fuel vapors resulting in rapid burning. If you must re-enter the vehicle, you should once again eliminate potentially dangerous static electricity discharge by touching a metal part of the vehicle, away from the fuel filler neck, nozzle or other gasoline source.

(Continued)
When refueling, always shut the engine off. Sparks produced by electrical components related to the engine can ignite fuel vapors causing a fire. Once refueling is complete, check to make sure the filler cap and filler door are securely closed, before starting the engine.

DO NOT use matches or a lighter and DO NOT SMOKE or leave a lit cigarette in your vehicle while at a gas station especially during refueling. Automotive fuel is highly flammable and can, when ignited, result in fire.

If a fire breaks out during refueling, leave the vicinity of the vehicle, and immediately contact the manager of the gas station and then contact the local fire department or 911. Follow any safety instructions they provide.

CAUTION

- Make sure to refuel your vehicle according to the "Fuel requirements" suggested in section 1.
- If the fuel filler cap requires replacement, use only a genuine HYUNDAI cap or the equivalent specified for your vehicle. An incorrect fuel filler cap can result in a serious malfunction of the fuel system or emission control system.
- Do not spill fuel on the exterior surfaces of the vehicle. Any type of fuel spilled on painted surfaces may damage the paint.
- After refueling, make sure the fuel cap is installed securely to prevent fuel spillage in the event of an accident.
Fuel filler door manual release

If the fuel filler door does not open using the remote fuel filler door release, you can open it manually. Unsnap and remove the panel in the cargo area. Pull the handle outward slightly.

⚠️ CAUTION
Do not pull the handle excessively, otherwise the luggage area trim or release handle may be damaged.
If your vehicle is equipped with a sunroof, you can slide or tilt your sunroof with the sunroof control lever located on the overhead console.

The sunroof can be operated for approximately 30 seconds after the ignition key is removed or turned to the ACC or LOCK position. However, if the front doors are opened, the sunroof cannot be opened even within the 30 seconds period.

- In cold and wet climates, the sunroof may not work properly due to freezing conditions.
- After the vehicle is washed or in a rainstorm, be sure to wipe off any water that is on the sunroof before operating it.

⚠️ CAUTION - Sunroof control lever

**Do not continue to move the sunroof control lever after the sunroof is fully opened, closed, or tilted. Damage to the motor or system components could occur.**

⚠️ CAUTION

**Make sure the sunroof is fully closed when leaving your vehicle. If the sunroof is opened, rain or snow may leak through the sunroof and wet the interior as well as cause theft.**
If the driver removes the ignition key (smart key: turns off the engine) when the sunroof is not fully closed.

The warning chime will sound for a few seconds and a message "Sunroof Open" will appear on the LCD display. Close the sunroof securely when leaving your vehicle.

**WARNING**

- Never adjust the sunroof or sunshade while driving. This could result in loss of control and an accident that may cause death, serious injury, or property damage.
- If you would like to carry items on the roof using a cross bar, do not operate the sunroof.
- When carrying cargo on the roof, do not load heavy items above the sunroof or glass roof.
- Do not allow children to operate the sunroof.

**CAUTION**

*Do not extend any luggage out side the sunroof while driving.*
Sunshade

To open the sunshade
Press the sunshade open button (1).

To close the sunshade when the sunroof glass is closed
- Press the sunshade close button (2).
  ✽ When you press the sunshade close button (2) with the sunroof glass opened, the sunshade will be closed halfway, then sunroof glass will be closed and then sunshade will be fully closed finally.

To stop the sliding at any point, press the sunshade control switch momentarily.

✽ NOTICE
Wrinkles formed on the sunshade as material characteristic are normal.

CAUTION
- Do not pull or push the sunshade by hand. It could cause sunshade failure.
- Close the sunroof when driving through dusty roads. Dust may cause a malfunction of the vehicle system.
Sliding the sunroof

When the sunshade is closed
If you pull the sunroof control lever backward, the sunshade and sunroof glass will slide all the way open. To stop the sunroof movement at any point, pull or push the sunroof control lever momentarily.

When the sunshade is opened
If you pull the sunroof control lever backward, the sunroof glass will slide all the way open. To stop the sunroof movement at any point, pull or push the sunroof control lever momentarily.

NOTICE
Only the front glass of the panoramic sunroof opens and closes.

Tilting the sunroof

When the sunshade is closed
If you push the sunroof control lever upward, the sunshade will slide halfway open then the sunroof glass will tilt. To stop the sunroof movement at any point, pull or push the sunroof control lever momentarily.

When the sunshade is opened
If you push the sunroof control lever upward, the sunroof glass will tilt. To stop the sunroof movement at any point, pull or push the sunroof control lever momentarily.
Features of your vehicle

Closing the sunroof

*To close (or tilt down) the sunroof*
- Pull the sunroof glass control lever downward (or forward).

*When you pull the sunroof glass control lever downward (or forward) with the sunshade opened, the glass will be closed (or tilt down).*

To stop the sunroof movement at any point, pull or push the sunroof control lever momentarily.

Automatic reversal

If an object or part of the body is detected while the sunroof glass or sunshade is closing automatically, it will reverse the direction, and then stop.

The auto reverse function does not work if a tiny obstacle is between the sliding glass or sunshade and the sunroof sash. You should always check that all passengers and objects are away from the sunroof before closing it.

Do not extend the face, neck, arms or body outside the sunroof while driving.

⚠️ WARNING - Sunroof

- Be careful that someone’s head, hands and body are not trapped by a closing sunroof.
- Do not extend the face, neck, arms or body outside through an opened sunroof while driving.
- Make sure your hands and face are safely out of the way before closing a sunroof.
- A panoramic sunroof is made of glass, therefore it may break in an accident. If you do not have your seat belt on, you may contact the broken glass and get injured or killed. For all passengers safety, have the seat belts on. (ex. seat belt, CRS, etc.)
Features of your vehicle

**Resetting the sunroof**

Sunroof needs to be reset if (in the followings)
- Battery is discharged or disconnected or the related fuse has been replaced or disconnected
- The one-touch sliding function of the sunroof does not normally operate

1. Turn the ignition switch to the ON position.
2. Close the sunshade and sunroof completely if opened.
3. Release the sunroof control lever.
4. Push the sunroof control lever forward in the direction of close (about 10 seconds) until the sunroof moves a little. Then, release the lever.
5. Push the sunroof control lever forward in the direction of close, until the sunroof operates as follows again:

   - The sunshade and sunroof glass slide open → The sunroof glass slide close → The sunshade close

   Then, release the lever.

When this is complete, the sunroof system has been reset.

UPPORTED NOTICE

If you do not reset the sunroof, it may not work properly.

**CAUTION - Sunroof motor damage**

- If you try to open the sunroof when the temperature is below freezing or when the sunroof is covered with snow or ice, the glass or the motor could be damaged.
- Periodically remove any dirt that may accumulate on the guide rail.
- If you drive with the sunroof opened right after a car wash or rain, water may get inside the vehicle.
Features of your vehicle

STEERING WHEEL

Electric power steering (EPS)

The power steering uses a motor to assist you in steering the vehicle. If the engine is off or if the power steering system becomes inoperative, the vehicle may still be steered, but it will require increased steering effort.

The motor driven power steering is controlled by a power steering control unit which senses the steering wheel torque and vehicle speed to command the motor.

The steering becomes heavier as the vehicle’s speed increases and becomes lighter as the vehicle’s speed decreases for optimum steering control.

Should you notice any change in the effort required to steer during normal vehicle operation, have the power steering checked by an authorized HYUNDAI dealer.

⚠️ CAUTION

- If the Electric Power Steering System does not operate normally, the warning light will illuminate on the instrument cluster. The steering wheel may become difficult to control or operate abnormally. Take your vehicle to an authorized HYUNDAI dealer and have the vehicle checked as soon as possible.
- When you operate the steering wheel in low temperature, abnormal noise could occur. If temperature rises, the noise will disappear. This is a normal condition.
- When the vehicle is stationary, if you turn the steering wheel all the way to the left or right continuously, the steering wheel becomes heavier from the end. But this is for your safety, not system malfunction. As time passes, the steering wheel return to its normal condition.

✽ NOTICE

The following symptoms may occur during normal vehicle operation:

- The EPS warning light does not illuminate.
- The steering gets heavy immediately after turning the ignition switch on. This happens as the system performs the EPS system diagnostics. When the diagnostics is completed, the steering wheel will return to its normal condition.
- A click noise may be heard from the EPS relay after the ignition switch is turned to the ON or LOCK (OFF) position.
- A motor noise may be heard when the vehicle is at a stop or at a low driving speed.
- If the Electric Power Steering System does not operate normally, the warning light will illuminate on the instrument cluster. The steering wheel may become difficult to control or operate abnormally. Take your vehicle to an authorized HYUNDAI dealer and have the vehicle checked as soon as possible.

(Continued)
Features of your vehicle

(Continued)

• When you operate the steering wheel in low temperature, abnormal noise could occur. If temperature rises, the noise will disappear. This is a normal condition.
• When the charging system warning light comes on or the voltage is low (When the alternator (or battery) does not operate normally or it malfunctions), the steering wheel may get heavy and become difficult to control operate abnormally.

Tilt steering

A tilt steering wheel allows you to adjust the steering wheel before you drive. You can also raise it to give your legs more room when you exit and enter the vehicle (if equipped).

The steering wheel should be positioned so that it is comfortable for you to drive, while permitting you to see the instrument panel warning lights and gauges.

To change the steering wheel angle, pull down the lock release lever (1), adjust the steering wheel to the desired angle (2) and height (if equipped) (3), then pull up the lock-release lever to lock the steering wheel in place. Be sure to adjust the steering wheel to the desired position before driving.

WARNING - Steering

• Never adjust the angle and height of steering wheel while driving. You may lose your steering control and cause severe personal injury or accidents.
• After adjusting, push the steering wheel both up and down to be certain it is locked in position.
Features of your vehicle

**Heated steering wheel (if equipped)**

With the ignition switch in the ON position, pressing the heated steering wheel button warms the steering wheel. The indicator on the button will illuminate and notify you on the LCD display.

To turn the heated steering wheel off, press the button once again. The indicator on the button will turn off and notify you on the LCD display.

**NOTICE**

The heated steering wheel will turn off automatically approximately 30 minutes after the heated steering wheel is turned on.

**CAUTION**

*Do not install any grip to operate the steering wheel. This causes damage to the heated steering wheel system.*

**Horn**

To sound the horn, press the area indicated by the horn symbol on your steering wheel (see illustration). The horn will operate only when this area is pressed.

Check the horn regularly to be sure it operates properly.
⚠️ **CAUTION**

- Do not strike the horn severely to operate it, or hit it with your fist. Do not press on the horn with a sharp-pointed object.
- When cleaning the steering wheel, do not use an organic solvent such as thinner, benzene, alcohol, and gasoline. Doing so may damage the steering wheel.
Features of your vehicle

MIRRORS

Inside rearview mirror
Adjust the rearview mirror so that the center view through the rear window is seen. Make this adjustment before you start driving.

⚠️ WARNING - Rear visibility
Do not place objects in the rear seat or cargo area which would interfere with your vision through the rear window.

⚠️ WARNING
Do not modify the inside mirror and do not install a wide mirror. It could result in injury, during an accident or deployment of the air bag.

Day/night rearview mirror
Make this adjustment before you start driving and while the day/night lever is in the day position.
Pull the day/night lever toward you to reduce glare from the headlights of the vehicles behind you during night driving.
Remember that you lose some rearview clarity in the night position.

Blue Link® center (if equipped)
For the details, refer to the Blue Link® Owner’s Guide, navigation manual or audio manual. The audio manual is in this section.
Electric chromic mirror (ECM) with compass and HomeLink® system (if equipped)

Your vehicle may be equipped with a Gentex Automatic-Dimming Mirror with a Z-Nav™ Electronic Compass Display and an Integrated HomeLink® Wireless Control System.

During nighttime driving, this feature will automatically detect and reduce rearview mirror glare while the compass indicates the direction the vehicle is pointed. The HomeLink® Universal Transceiver allows you to activate your garage door(s), electric gate, home lighting, etc.

Automatic-Dimming Night Vision Safety™ (NVS®) Mirror

The NVS® Mirror in your vehicle is the most advanced way to reduce annoying glare in the rearview mirror during any driving situation. For more information regarding NVS® mirrors and other applications, please refer to the Gentex website:

www.gentex.com

CAUTION

The NVS® Mirror automatically reduces glare during driving conditions based upon light levels monitored in front of the vehicle and from the rear of the vehicle. These light sensors are visible through openings in the front and rear of the mirror case. Any object that would obstruct either light sensor will degrade the automatic dimming control feature.
Automatic-dimming function

Your mirror will automatically dim upon detecting glare from the vehicles traveling behind you. The auto-dimming function can be controlled by pushing the ON/OFF Button:

1. Pressing the button turns the auto-dimming function OFF which is indicated by the green Status Indicator LED turning off.
2. Pressing the button again turns the auto-dimming function ON which is indicated by the green Status Indicator LED turning on.

✽ NOTICE

The mirror defaults to the ON position each time the vehicle is started.

Z-Nav™ Compass Display

The NVS™ Mirror in your vehicle is also equipped with a Z-Nav™ Compass that shows the vehicle Compass heading in the Display Window using the 8 basic cardinal headings (N, NE, E, SE, etc.).

Compass function

The Compass can be turned ON and OFF and will remember the last state when the ignition is cycled. To turn the display feature ON/OFF:

1. Press and release the button to turn the display feature OFF.
2. Press and release the button again to turn the display back ON.

Additional options can be set with press and hold sequences of the button and are detailed below.

There is a difference between magnetic north and true north. The compass in the mirror can compensate for this difference when it knows the Magnetic Zone in which it is operating. This is set either by the dealer or by the user. The operating Zone Numbers for North America are shown in the figure on the following section.
To adjust the Zone setting:

1. Determine the desired Zone Number based upon your current location on the Zone Map.

2. Press and hold the button for more than 3 but less than 6 seconds, the current Zone Number will appear on the display.

3. Pressing and holding the button again will cause the numbers to increment (Note: they will repeat ... 13, 14, 15, 1, 2, ...). Releasing the button when the desired Zone Number appears on the display will set the new Zone.

4. Within about 5 seconds the compass will start displaying a compass heading again.

There are some conditions that can cause changes to the vehicle magnets, such as installing a ski rack or a CB antenna. Body repair work on the vehicle can also cause changes to the vehicle’s magnetic field. In these situations, the compass will need to be re-calibrated to quickly correct for these changes. To re-calibrate the compass:
Features of your vehicle

1. Press and hold the button for more than 6 seconds. When the compass memory is cleared a "C" will appear in the display.
2. To calibrate the compass, drive the vehicle in 2 complete circles at less than 5 mph (8 km/h).

Integrated HomeLink® Wireless Control System

The HomeLink® Wireless Control System provides a convenient way to replace up to three hand-held radio-frequency (RF) transmitters with a single built-in device. This innovative feature will learn the radio frequency codes of most current transmitters to operate devices such as gate operators, garage door openers, entry door locks, security systems, even home lighting. Both standard and rolling code-equipped transmitters can be programmed by following the outlined procedures. Additional HomeLink® information can be found at: www.homelink.com or by calling 1-800-355-3515.

⚠ CAUTION

Before programming HomeLink® to a garage door opener or gate operator, make sure that people and objects are out of the way of the device to prevent potential harm or damage. Do not use HomeLink® with any garage door opener that lacks the safety stop and reverse features required by U.S. federal safety standards (this includes any garage door opener model manufactured before April 1, 1982). A garage door that cannot detect an object - signaling the door to stop and reverse - does not meet current U.S. federal safety standards. Using a garage door opener without these features increases the risk of serious injury or death.

Retain the original transmitter of the RF device you are programming for use in other vehicles as well as for future HomeLink® programming. It is also suggested that upon the sale of the vehicle, the programmed HomeLink® buttons be erased for security purposes.
Programming HomeLink®

**NOTICE**
- When programming a garage door opener, it is advised to park the vehicle outside of the garage.
- It is recommended that a new battery be placed in the hand-held transmitter of the device being programmed to HomeLink® for quicker training and accurate transmission of the radio-frequency signal.
- Some vehicles may require the ignition switch to be turned to the second (or "accessories") position for programming and/or operation of HomeLink.
- In the event that there are still programming difficulties or questions after following the programming steps listed below, contact HomeLink® at: www.homelink.com or 1-800-355-3515.

**Standard programming**
To train most devices, follow these instructions:

1. For first-time programming, press and hold the two outside buttons, HomeLink® Channel 1 and Channel 3 Buttons, until the indicator light begins to flash (after 20 seconds). Release both buttons. Do not hold the buttons for longer than 30 seconds.

2. Position the end of your hand-held transmitter 1-3 inches (2-8 cm) away from the HomeLink® buttons while keeping the indicator light in view.

3. Simultaneously press and hold both the HomeLink® and hand-held transmitter button. DO NOT release the buttons until step 4 has been completed.

4. While continuing to hold the buttons the red Indicator Status LED will flash slowly and then rapidly after HomeLink® successfully trains to the frequency signal from the hand-held transmitter. Release both buttons.

5. Press and hold the just-trained HomeLink® button and observe the red Status Indicator LED. If the indicator light stays on constantly, programming is complete and your device should activate when the HomeLink® button is pressed and released.

6. To program the remaining two HomeLink® buttons, follow steps 2 through 5.
Rolling code programming
Rolling code devices which are "code-protected" and manufactured after 1996 may be determined by the following:

- Reference the device owner's manual for verification.
- The handheld transmitter appears to program the HomeLink® Universal Transceiver but does not activate the device.
- Press and hold the trained HomeLink button. The device has the rolling code feature if the indicator light flashes rapidly and then turns solid after 2 seconds.

To train rolling code devices, follow these instructions:

1. At the garage door opener receiver (motor-head unit) in the garage, locate the "learn" or "smart" button. This can usually be found where the hanging antenna wire is attached to the motor-head unit. Exact location and color of the button may vary by garage door opener brand. If there is difficulty locating the training button, reference the device owner's manual or please visit our Web site at www.homelink.com.

2. Firmly press and release the "learn" or "smart" button (which activates the "training light").

3. Return to the vehicle and firmly press, hold for two seconds and then release the desired HomeLink® button. Repeat the "press/hold/release" sequence a second time to complete the programming. (Some devices may require you to repeat this sequence a third time to complete the programming.)

4. Press and hold the just-trained HomeLink® button and observe the red Status Indicator LED. If the indicator light stays on constantly, programming is complete and your device should activate.

5. To program the remaining two HomeLink® buttons, follow either steps 1 through 4 above for other Rolling Code devices or steps 2 through 5 in Standard Programming for standard devices.

*NOTICE*
There are 30 seconds in which to initiate step 3.
Gate operator & Canadian programming
During programming, your handheld transmitter may automatically stop transmitting. Continue to press the Integrated HomeLink® Wireless Control System button (note steps 2 through 4 in the Standard Programming portion of this document) while you press and re-press ("cycle") your handheld transmitter every two seconds until the frequency signal has been learned. The indicator light will flash slowly and then rapidly after several seconds upon successful training.

Operating HomeLink®
To operate, simply press and release the programmed HomeLink® button. Activation will now occur for the trained device (i.e. garage door opener, gate operator, security system, entry door lock, home/office lighting, etc.). For convenience, the hand-held transmitter of the device may also be used at any time.

Reprogramming a single HomeLink® button
To program a new device to a previously trained HomeLink® button, follow these steps:
1. Press and hold the desired HomeLink® button. Do NOT release until step 4 has been completed.
2. When the indicator light begins to flash slowly (after 20 seconds), position the handheld transmitter 1 to 3 inches away from the HomeLink® surface.
3. Press and hold the handheld transmitter button. The HomeLink® indicator light will flash, first slowly and then rapidly.
4. When the indicator light begins to flash rapidly, release both buttons.
5. Press and hold the just-trained HomeLink® button and observe the red Status Indicator LED. If the indicator light stays on constantly, programming is complete and your new device should activate.

Erasing HomeLink® buttons
Individual buttons cannot be erased. However, to erase all three programmed buttons:
1. Press and hold the two outer HomeLink® buttons until the indicator light begins to flash—after 20 seconds.
2. Release both buttons. Do not hold for longer than 30 seconds.

The Integrated HomeLink® Wireless Control System is now in the training (learn) mode and can be programmed at any time following the appropriate steps in the Programming sections above.

FCC ID: NZLZTVHL3
IC: 4112A-ZTVHL3
This device complies with Part 15 of the FCC Rules.
Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

WARNING
The transceiver has been tested and complies with FCC and Industry Canada rules. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the device.

NVS® is a registered trademark and Z-Nav™ is a trademark of the Gentex Corporation, Zeeland, Michigan. HomeLink® is a registered trademark owned by Johnson Controls, Incorporated, Milwaukee, Wisconsin.

Electric chromic mirror (ECM) with HomeLink® system, compass and Blue Link® (if equipped)
Your vehicle may be equipped with a Gentex Automatic-Dimming Mirror with a Z-Nav™ Electronic Compass Display and an Integrated HomeLink® Wireless Control System. During nighttime driving, this feature will automatically detect and reduce rearview mirror glare while the compass indicates the direction the vehicle is pointed. The HomeLink® Universal Transceiver allows you to activate your garage door(s), electric gate, home lighting, etc.

(1) Telematics button
(2) Telematics button
(3) Telematics button
(4) Compass control button & Dimming ON/OFF button
(5) Status indicator LED
(6) Channel 1 button
(7) Channel 2 button
(8) Channel 3 button
(9) Compass display
(10) Rear light sensor
Automatic-Dimming Night Vision Safety™ (NVS®) Mirror

The NVS® Mirror in your vehicle is the most advanced way to reduce annoying glare in the rearview mirror during any driving situation. For more information regarding NVS® mirrors and other applications, please refer to the Gentex website: www.gentex.com

*NOTICE*

The NVS® Mirror automatically reduces glare during driving conditions based upon light levels monitored in front of the vehicle and from the rear of the vehicle. These light sensors are visible through openings in the front and rear of the mirror case. Any object that obstructs either light sensor will degrade the automatic dimming control feature.

**Automatic-dimming function**

Your mirror will automatically dim upon detecting glare from the vehicles traveling behind you. The auto-dimming function can be controlled by the Dimming ON/OFF Button:

1. Pressing and hold the  button for 3 seconds turns the autodimming function OFF which is indicated by the green Status Indicator LED turning off.

2. Pressing and hold the  button for 3 seconds again turns the auto-dimming function ON which is indicated by the green Status Indicator LED turning on.

The mirror defaults to the ON position each time the vehicle is started.

**Z-Nav™ Compass Display**

The NVS™ Mirror in your vehicle is also equipped with a Z-Nav™ Compass that shows the vehicle Compass heading in the Display Window using the 8 basic cardinal headings (N, NE, E, SE, etc.).
Compass function

The Compass can be turned ON and OFF and will remember the last state when the ignition is cycled. To turn the display feature ON/OFF:

1. Press and release the button within 1 second to turn the display feature OFF.
2. Press and release the button again within 1 second to turn the display back ON.

Additional options can be set with press and hold sequences of the button and are detailed below.

There is a difference between magnetic north and true north. The compass in the mirror can compensate for this difference when it knows the Magnetic Zone in which it is operating. This is set either by the dealer or by the user. The operating Zone Numbers for North America are shown in the figure on the following section.
To adjust the Zone setting:
1. Determine the desired Zone Number based upon your current location on the Zone Map.
2. Press and hold the button for 6 seconds, the current Zone Number will appear on the display.
3. Pressing and holding the button again will cause the numbers to increment (Note: they will repeat ...13, 14, 15, 1, 2, ...). Releasing the button when the desired Zone Number appears on the display will set the new Zone.
4. Within about 5 seconds the compass will start displaying a compass heading again.

There are some conditions that can cause changes to the vehicle magnets, such as installing a ski rack or a CB antenna. Body repair work on the vehicle can also cause changes to the vehicle's magnetic field. In these situations, the compass will need to be re-calibrated to quickly correct for these changes. To re-calibrate the compass:

1. Press and hold the button for more than 9 seconds. When the compass memory is cleared a "C" will appear in the display.
2. To calibrate the compass, drive the vehicle in 2 complete circles at less than 5 mph (8 km/h).

Integrated HomeLink® Wireless Control System

The HomeLink® Wireless Control System provides a convenient way to replace up to three hand-held radio-frequency (RF) transmitters with a single built-in device. This innovative feature will learn the radio frequency codes of most current transmitters to operate devices such as gate operators, garage door openers, entry door locks, security systems, even home lighting. Both standard and rolling code-equipped transmitters can be programmed by following the outlined procedures. Additional HomeLink® information can be found at: www.homelink.com or by calling 1-800-355-3515.
Features of your vehicle

Retain the original transmitter of the RF device you are programming for use in other vehicles as well as for future HomeLink® programming. It is also suggested that upon the sale of the vehicle, the programmed HomeLink® buttons be erased for security purposes.

⚠️ WARNING
Before programming HomeLink® to a garage door opener or gate operator, make sure that people and objects are out of the way of the device to prevent potential harm or damage. Do not use HomeLink® with any garage door opener that lacks the safety stop and reverse features required by U.S. federal safety standards (this includes any garage door opener model manufactured before April 1, 1982). A garage door that cannot detect an object - signaling the door to stop and reverse - does not meet current U.S. federal safety standards. Using a garage door opener without these features increases the risk of serious injury or death.

Programming HomeLink®

⚠️ NOTICE

• When programming a garage door opener, it is advised to park the vehicle outside of the garage.
• It is recommended that a new battery be placed in the hand-held transmitter of the device being programmed to HomeLink® for quicker training and accurate transmission of the radio-frequency signal.
• Some vehicles may require the ignition switch to be turned to the second (or "accessories") position for programming and/or operation of HomeLink.
• In the event that there are still programming difficulties or questions after following the programming steps listed below, contact HomeLink® at: www.homelink.com or 1-800-355-3515.

• When programming a garage door opener, it is advised to park the vehicle outside of the garage.
• It is recommended that a new battery be placed in the hand-held transmitter of the device being programmed to HomeLink® for quicker training and accurate transmission of the radio-frequency signal.
• Some vehicles may require the ignition switch to be turned to the second (or "accessories") position for programming and/or operation of HomeLink.
• In the event that there are still programming difficulties or questions after following the programming steps listed below, contact HomeLink® at: www.homelink.com or 1-800-355-3515.
To train most devices, follow these instructions:

1. For first-time programming, press and hold the two outside buttons (, ), HomeLink® Channel 1 and Channel 3, until the indicator light begins to flash (after 10 seconds). Release both buttons. Do not hold the buttons for longer than 20 seconds.

2. Position the end of your hand-held transmitter 1-3 inches (2-8 cm) away from the HomeLink® button you wish to program while keeping the indicator light in view.

3. Simultaneously press and hold both the HomeLink® and hand-held transmitter buttons until the HomeLink® indicator light changes from a slow to a rapid blinking light. Now you may release both the HomeLink® and hand-held transmitter buttons.

❄ NOTICE

Some devices may require you to replace this Programming step 3 with procedures noted in the "Gate Operator/Canadian Programming" section. If the HomeLink® indicator light does not change to a rapidly blinking light after performing these steps, contact HomeLink® at www.homelink.com.

4. Firmly press, hold for 5 seconds and release the programmed HomeLink® button up to two separate times to activate the door. If the door does not activate, press and hold the just-trained HomeLink® button and observe the indicator light.

• If the indicator light stays on constantly, programming is complete and your device should activate when the HomeLink® button is pressed and released.

• If the indicator light blinks rapidly for 2 seconds and then turns to a constant light, continue with "Programming" steps 5-7 to complete the programming of a rolling code equipped device (most commonly a garage door opener).
5. At the garage door opener receiver (motor-head unit) in the garage, locate the "learn" or "smart" button. This can usually be found where the hanging antenna wire is attached to the motor-head unit.

6. Firmly press and release the "learn" or "smart" button. (The name and color of the button vary by manufacturer). There are 30 seconds to initiate step 7.

7. Return to the vehicle and firmly press, hold for 2 seconds and release the programmed HomeLink® button. Repeat the "press/hold/release" sequence a second time, and, depending on the brand of the garage door opener (or other rolling code equipped device), repeat this sequence a third time to complete the programming process.

HomeLink® should now activate your rolling code equipped device.

**Gate operator & Canadian programming**

During programming, your handheld transmitter may automatically stop transmitting. Continue to press the Integrated HomeLink® Wireless Control System button (note steps 2 through 3 in the Programming portion of this document) while you press and re-press ("cycle") your handheld transmitter every two seconds until the frequency signal has been learned. The indicator light will flash slowly and then rapidly after several seconds upon successful training.

**Operating HomeLink®**

To operate, simply press and release the programmed HomeLink® button. Activation will now occur for the trained device (i.e. garage door opener, gate operator, security system, entry door lock, home/office lighting, etc.). For convenience, the hand-held transmitter of the device may also be used at any time.

**Reprogramming a single HomeLink® button**

To program a device to HomeLink® using a HomeLink® button previously trained, follow these steps:

1. Press and hold the desired HomeLink® button. DO NOT release the button.

2. The indicator light will begin to flash after 20 seconds. Without releasing the HomeLink® button, proceed with "Programming" step 2.

For questions or comments, contact HomeLink® at www.homelink.com or 1-800-355-3515.
**Erasing HomeLink® buttons**

Individual buttons cannot be erased. However, to erase all three programmed buttons:

1. Press and hold the two outer HomeLink® buttons until the indicator light begins to flash after 10 seconds.
2. Release both buttons. Do not hold for longer than 20 seconds.

The Integrated HomeLink® Wireless Control System is now in the training (learn) mode and can be programmed at any time following the appropriate steps in the Programming sections above.

**FCC ID: NZLTLML4**

**IC: 4112A-TLMHL4**

This device complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

**CAUTION**

The transceiver has been tested and complies with FCC and Industry Canada rules. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the device.

NVS® is a registered trademark and Z-Nav™ is a trademark of the Gentex Corporation, Zeeland, Michigan. HomeLink® is a registered trademark owned by Johnson Controls, Incorporated, Milwaukee, Wisconsin.
Features of your vehicle

Side view mirrors
Be sure to adjust mirror angles before driving.
Your vehicle is equipped with both left-hand and right-hand side view mirrors. The mirrors can be adjusted remotely with the remote switch. The mirror heads can be folded back to prevent damage during an automatic car wash or when passing in a narrow street.

⚠️ CAUTION - Side view mirrors
- The right side view mirrors is convex. Objects seen in the mirror are closer than they appear.
- Use your interior rearview mirror or direct observation to determine the actual distance of following vehicles when changing lanes.

⚠️ CAUTION
Do not scrape ice off the mirror face; this may damage the surface of the glass. If ice should restrict movement of the mirror, do not force the mirror for adjustment. To remove ice, use a deicer spray, or a sponge or soft cloth with warm water.

⚠️ CAUTION
If the mirror is jammed with ice, do not adjust the mirror by force. Use an approved spray de-icer (not radiator antifreeze) to release the frozen mechanism or move the vehicle to a warm place and allow the ice to melt.

⚠️ WARNING
Do not adjust or fold the side view mirrors while the vehicle is moving. This could result in loss of control, and an accident which could cause death, serious injury or property damage.

Remote control
The electric remote control mirror switch allows you to adjust the position of the left and right side view mirrors.
To adjust the position of the mirrors:
1. Place the ignition switch in the ON position.
2. Move the lever(1) to R (right) or L (left) to select the right side mirror or the left side mirror.
3. Press a corresponding point on the mirror adjustment control to position the selected mirror up, down, left or right.
4. After the adjustment, position the lever in the center to prevent inadvertent movement.

**CAUTION**

- *The mirrors stop moving when they reach the maximum adjusting angles, but the motor continues to operate while the switch is pressed.*
- *Do not press the switch longer than necessary, the motor may be damaged.*
- *Do not attempt to adjust the side view mirrors by hand. Doing so may damage the mirror.*

**Reverse parking aid function (if equipped)**

When you shift the shift lever to the R (Reverse) position, the side view mirror(s) will move downward to aid reverse parking.

According to the position of the side view mirrors control switch (1), the side view mirror(s) will operate as follows:

- **Left or Right**: When the side view mirrors control switch is in the L (Left) or R (Right) position, both side view mirrors will move downward.
- **Neutral**: When the side view mirrors control switch is in the neutral (center) position, the side view mirrors will not operate.

**NOTICE**

The side view mirrors will automatically revert to their original positions under the following conditions:

- When the ignition switch or engine start/stop button is set to the ACC or OFF position.
- When the shift lever is moved to any position except the R (Reverse) position.
Features of your vehicle

Folding the side view mirrors

To fold side view mirrors, grasp the housing of mirror and then fold it toward the rear of the vehicle.

Blind spot mirror (if equipped)

The Blind Spot Mirror (BSM) is a supplemental mirror that minimizes the driver's blind spot zone by expanding the field of view on the rear side of the vehicle. The blind spot mirror is equipped on the driver's left side view mirror.

WARNING
- Always check the road condition while driving for unexpected situations even though the vehicle is equipped with a blind spot mirror.
- The blind spot mirror is a device made for convenience. Do not solely rely on the mirror but always pay attention to traffic around you.

CAUTION
Do not clean the mirror with harsh abrasives, fuel or other petroleum based cleaning products.
Features of your vehicle

INSTRUMENT CLUSTER

Type A

1. Tachometer
2. Speedometer
3. Engine coolant temperature gauge
4. Fuel gauge
5. LCD display
6. Warning and indicator lights (if equipped)
7. Turn signal indicator lights

Type B

*The actual cluster in the vehicle may differ from the illustration.
For more details, refer to the "Gauges" in this chapter.
Features of your vehicle

Instrument Cluster Control

Adjusting Instrument Cluster Illumination

The brightness of the instrument panel illumination is changed by moving the illumination control knob right or left when the ignition switch or Engine Start/Stop button is ON, or the tail lights are turned on.

- The brightness has 20 levels: 1 (MIN) ~ 20 (MAX)
- If you hold the illumination control knob on the right end (+) or left end (-), the brightness will be changed continuously.
- If the brightness reaches to the maximum or minimum level, an alarm will sound.

Gauges

Speedometer

The speedometer indicates the speed of the vehicle and is calibrated in miles per hour (mph) and/or kilometers per hour (km/h).
**Features of your vehicle**

**Tachometer**

![Tachometer Image]

The tachometer indicates the approximate number of engine revolutions per minute (rpm).

Use the tachometer to select the correct shift points and to prevent lugging and/or over-revving the engine.

⚠️ **CAUTION**

*Do not operate the engine within the tachometer’s RED ZONE. This may cause severe engine damage.*

**Engine Coolant Temperature Gauge**

![Engine Coolant Temperature Gauge Image]

This gauge indicates the temperature of the engine coolant when the ignition switch or Engine Start/Stop button is ON.

⚠️ **CAUTION**

*If the gauge pointer moves beyond the normal range area toward the “H” position, it indicates overheating that may damage the engine. Do not continue driving with an overheated engine. If your vehicle overheats, refer to “If the Engine Overheats” in chapter 6.*

⚠️ **WARNING**

*Never remove the radiator cap when the engine is hot. The engine coolant is under pressure and could severely burn. Wait until the engine is cool before adding coolant to the reservoir.*
**Features of your vehicle**

### Fuel Gauge

This gauge indicates the approximate amount of fuel remaining in the fuel tank.

**NOTICE**
- The fuel tank capacity is given in chapter 8.
- The fuel gauge is supplemented by a low fuel warning light, which will illuminate when the fuel tank is nearly empty.
- On inclines or curves, the fuel gauge pointer may fluctuate or the low fuel warning light may come on earlier than usual due to the movement of fuel in the tank.

### WARNING - Fuel Gauge
Running out of fuel can expose vehicle occupants to danger. You must stop and obtain additional fuel as soon as possible after the warning light comes on or when the gauge indicator comes close to the “E (Empty)” level.

### CAUTION
Avoid driving with a extremely low fuel level. Running out of fuel could cause the engine to misfire damaging the catalytic converter.

### Odometer
The odometer indicates the total distance that the vehicle has been driven and should be used to determine when periodic maintenance should be performed.
Outside Temperature Gauge

This gauge indicates the current outside air temperatures by 1°F (1°C).
- Temperature range: -40°F ~ 140°F (-40°C ~ 60°C)
The outside temperature on the display may not change immediately like a general thermometer to prevent the driver from being distracted.
The temperature unit (from °F to °C or from °C to °F) can be changed by using the “User Settings” mode of the LCD display.

Transaxle Shift Indicator

Automatic Transaxle Shift Indicator

This indicator displays which automatic transaxle shift lever is selected.
- Park: P
- Reverse: R
- Neutral: N
- Drive: D
- Manual shift mode: 1, 2, 3, 4, 5, 6

Shift indicator pop-up (if equipped)

The pop-up displays the current gear position selected for 2 seconds (P/R/N/D).
Features of your vehicle

**LCD DISPLAY**

**LCD Display Control**

The LCD display modes can be changed by using the control buttons on the steering wheel.

- (1) : MODE button for changing modes
- (2) : MOVE button for changing items
- (3) : SELECT/RESET button for setting or resetting the selected item

### LCD Modes

Features of your vehicle

**Trip Computer Mode**
- Type A
- Type B

The trip computer mode displays information related to vehicle driving parameters including range, fuel economy, trip meter information and vehicle speed.

For more information, refer to "Trip Computer" in this chapter.

**Turn By Turn (TBT) Mode (if equipped)**
- Type A
- Type B

This mode displays the state of the navigation.

**SCC/LDWS Mode (if equipped)**
- Type A
- Type B

This mode displays the state of the Advanced Smart Cruise Control system (SCC) or Lane Departure Warning System (LDWS).

For more information, refer to "Advanced Smart Cruise Control system (SCC)" or "Lane Departure Warning System (LDWS)" in chapter 5.
Features of your vehicle

A/V Mode

This mode displays the state of the A/V system.

Service Mode

Service Interval

- **Service in**
  
  It calculates and displays when you need a scheduled maintenance service (mileage or days).
  
  If the remaining mileage or time reaches 900 mi. (1,500 km) or 30 days, "Service in" message is displayed for several seconds each time you set the ignition switch or Engine Start/Stop Button to the ON position.

- **Service required**
  
  If you do not have your vehicle serviced according to the pre-selected service interval, "Service required" message is displayed for several seconds each time you set the ignition switch or Engine Start/Stop Button to the ON position (The mileage and time changes to "---").

To reset the service interval to the mileage and days you inputted before:
- Press the SELECT/RESET button for more than 1 second.
Features of your vehicle

Service in OFF

If the service interval is not set, "Service in OFF" message is displayed on the LCD display.

*N NOTICE

If any of the following conditions occur, the mileage and days may be incorrect.
- The battery cable is disconnected.
- The fuse switch is turned off.
- The battery is discharged.

Master Warning Mode (if equipped)

- This warning light informs the driver the following situations:
  - Low washer fluid (if equipped).
  - Blind Spot Detection (BSD) malfunction (if equipped).
  - Lane Departure warning system (LDWS) malfunction (if equipped).
  - Smart cruise control system (SCC) malfunction (if equipped).
  - Service reminder and so on.

The Master Warning Light illuminates when more than one of the above warning situations occur. At this time, the LCD Modes Icon will change from (之道) to (之道).

If the warning situation is solved, the master warning light will be turned off and the LCD Modes Icon will be changed back to its previous icon (之道). (ex: refill the washer fluid)

User Settings Mode

Description

On this mode, you can change setting of the doors, lamps, and so on.
### Driving Assist (if equipped)

## Door

<table>
<thead>
<tr>
<th>Items</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| Automatically Lock     | • Disable : The auto door lock operation will be deactivated.  
• Enable on Speed : All doors will be automatically locked when the vehicle speed exceeds 9.3mph (15km/h).  
• Enable on Shift : All doors will be automatically locked if the automatic transaxle shift lever is shifted from the P (Park) position to the R (Reverse), N (Neutral), or D (Drive) position. |
| Automatically Unlock    | • Disable : The auto door unlock operation will be canceled.  
• Vehicle Off : All doors will be automatically unlocked when the ignition key is removed from the ignition switch or the Engine Start/Stop button is set to the OFF position.  
• On Shift to P : All doors will be automatically unlocked if the automatic transaxle shift lever is shifted to the P (Park) position. |
| Two Press Unlock       | • Off : The two press unlock function will be deactivated. Therefore, all doors will unlock if the door unlock button is pressed.  
• On : Only the driver's door will unlock if the door unlock button is pressed. When the door unlock button is pressed again within 4 seconds, the remaining doors will unlock. |
| Horn Feedback (if equipped) | If this item is checked, the horn feedback operation will be activated.  
After locking the door by pressing the lock button on the remote key, if you press the lock button again within 4 seconds, the warning sound will operate once to indicate that all doors are locked. |
| Power Liftgate (Power Tailgate) (if equipped) | If this item is checked, the power liftgate (power tailgate) function will be activated.  
For more details, refer to "Liftgate (Tailgate)" in this chapter. |
| Smart Liftgate (Smart Tailgate) (if equipped) | If this item is checked, the smart liftgate (smart tailgate) function will be activated.  
If the power tailgate function is not activated, you can not activate this function.  
For more details, refer to "Liftgate (Tailgate)" in this chapter. |

Warning Messages

Shift to P (for smart key system)

- This warning message illuminates if you try to turn off the engine without the shift lever in P (Park) position.
- At this time, the Engine Start/Stop Button turns to the ACC position (If you press the Engine Start/Stop Button once more, it will turn to the ON position).

Low Key Battery (for smart key system)

- This warning message illuminates if the battery of the smart key is discharged when the Engine Start/Stop Button changes to the OFF position.

Press START (POWER) button while turn steering (for smart key system)

- This warning message illuminates if the steering wheel does not unlock normally when the Engine Start/Stop Button is pressed.
- It means that you should press the Engine Start/Stop Button while turning the steering wheel right and left.
Features of your vehicle

**Steering wheel unlocked (for smart key system)**

- This warning message illuminates if the steering wheel does not lock when the Engine Start/Stop Button changes to the OFF position.

**Check steering wheel lock system (for smart key system)**

- This warning message illuminates if the steering wheel does not lock normally when the Engine Start/Stop Button changes to the OFF position.

**Press brake pedal to start engine (for smart key system)**

- This warning message illuminates if the Engine Start/Stop Button changes to the ACC position twice by pressing the button repeatedly without depressing the brake pedal.
- It means that you should depress the brake pedal to start the engine.
Key not in vehicle (for smart key system)

- This warning message illuminates if the smart key is not in the vehicle when you press the Engine Start/Stop Button.

Key not detected (for smart key system)

- This warning message illuminates if the smart key is not detected when you press the Engine Start/Stop Button.

Press START (POWER) button again (for smart key system)

- This warning message illuminates if you can not operate the Engine Start/Stop Button when there is a problem with the Engine Start/Stop Button system.
- It means that you could start the engine by pressing the Engine Start/Stop Button once more.
- If the warning illuminates each time you press the Engine Start/Stop Button, have your vehicle inspected by an authorized HYUNDAI dealer.
Features of your vehicle

**Press START button with key (for smart key system)**

- Type A
- Type B

This warning message illuminates if you press the Engine Start/Stop Button while the warning message “Key not detected” is illuminating.

At this time, the immobilizer indicator light blinks.

**Check fuse BRAKE SWITCH (for smart key system)**

- Type A
- Type B

This warning message illuminates if the brake switch fuse is not functioning and should be checked.

It means that you should replace the fuse with a new one. If that is not possible, you can start the engine by pressing the Engine Start/Stop Button for 10 seconds in the ACC position.

**Shift to P or N to start engine (for smart key system)**

- Type A
- Type B

This warning message illuminates if you try to start the engine with the shift lever not in the P (Park) or N (Neutral) position.

**NOTICE**

You can start the engine with the shift lever in the N (Neutral) position. But, for your safety, we recommend that you start the engine with the shift lever in the P (Park) position.
**Features of your vehicle**

**Door, Liftgate (Tailgate), Hood Open**

- **Type A**
- **Type B**

- This warning message is displayed indicating which door, or the liftgate (tailgate), or the hood is open.

**Sunroof Open (if equipped)**

- **Type A**
- **Type B**

- This warning message is displayed if you turn off the engine when the sunroof is opened.

**Align steering wheel (if equipped)**

- **Type A**
- **Type B**

- This warning message illuminates if you start the engine when the steering wheel is turned to more than 90 degrees to the left or right.
- It means that you should turn the steering wheel and make the angle of the steering wheel be less than 30 degrees.
Features of your vehicle

**Low Washer Fluid (if equipped)**

- This warning message illuminates on the service reminder menu if the washer fluid level in the reservoir is nearly empty.
- It means that you should refill the washer fluid.

**Low Fuel**

- This warning message illuminates if the fuel tank is nearly empty.
  - When the low fuel level warning light illuminates.
  - When the trip computer displays "--- mile (or km)" as distance to empty.

Add fuel as soon as possible.

**Engine has overheated**

- This warning message illuminates when the engine coolant temperature is above 248°F (120°C).
- It means that the engine is overheating and may become damaged.

If your vehicle is overheated, refer to "Overheating" in chapter 6.
**Low Tire Pressure (if equipped)**

- This warning message illuminates if the tire pressure is low with the Engine/Start button in the ON position.

For more details, refer to "Tire Pressure Monitoring System (TPMS)" in chapter 6.

**Heated Steering Wheel On/Off (if equipped)**

- This message illuminates if you turn on/off the heated steering wheel feature.

For more details, refer to "Heated Steering Wheel" in this chapter.

**Turn on FUSE SWITCH (if equipped)**

- This warning message illuminates if the fuse switch under the steering wheel is OFF.

- It means that you should turn the fuse switch on.

For more details, refer to “Fuses” in chapter 7.
Features of your vehicle

**Check AEB system (if equipped)**

- This warning message illuminates if there is a malfunction with the Automatic Emergency Braking (AEB) system, have your vehicle inspected by an authorized HYUNDAI dealer.

For more details, refer to "Automatic Emergency Braking (AEB) system" in chapter 5.

**Check SCC System (if equipped)**

- This warning message illuminates if there is a malfunction with the advanced smart cruise control system, have your vehicle inspected by an authorized HYUNDAI dealer.

For more details, refer to "Advanced Smart Cruise Control System" in chapter 5.

**Check BSD System (if equipped)**

- This warning message illuminates if there is a malfunction with the Blind Spot Detection (BSD) system. And the BSD system will be automatically deactivated, have your vehicle inspected by an authorized HYUNDAI dealer.

For more details, refer to "Blind Spot Detection (BSD) System" in chapter 5.
Check headlight (if equipped)

- This warning message illuminates if there is a malfunction with the headlamp. In this case, have your vehicle inspected by an authorized HYUNDAI dealer.

**NOTICE**

- When replacing the bulb, use the same wattage bulb. For more information, refer to "BULB WATTAGE" in chapter 8.
- If the different wattage bulb is equipped with the vehicle, this warning message is not displayed.
Features of your vehicle

TRIP COMPUTER

Overview

Description
The trip computer is a microcomputer-controlled driver information system that displays information related to driving.

* NOTICE
Some driving information stored in the trip computer (for example Average Vehicle Speed) resets if the battery is disconnected.

To change the trip mode, press the MOVE button ▼.

Trip Modes

FUEL ECONOMY

- Distance To Empty
- Average Fuel Economy
- Instant Fuel Economy

TRIP A

- Tripmeter [A]
- Average Vehicle Speed [A]
- Elapsed Time [A]

TRIP B

- Tripmeter [B]
- Average Vehicle Speed [B]
- Elapsed Time [B]

Digital speedometer
**Features of your vehicle**

**Fuel Economy**

- **Type A**
  - Range: 450 mi
  - Avg: 24.7 MPG

- **Type B**
  - Range: 450 mi
  - Avg: 24.7 MPG

**Distance To Empty (1)**

- The distance to empty is the estimated distance the vehicle can be driven with the remaining fuel.
  - Distance range: 1 ~ 9999 mi or 1 ~ 9999 km.
- If the estimated distance is below 1 mi. (1 km), the trip computer will display "----" as distance to empty.

### NOTICE

- If the vehicle is not on level ground or the battery power has been interrupted, the distance to empty function may not operate correctly.
- The distance to empty may differ from the actual driving distance as it is an estimate of the available driving distance.
- The trip computer may not register additional fuel if less than 1.6 gallons (6 liters) of fuel are added to the vehicle.
- The fuel economy and distance to empty may vary significantly based on driving conditions, driving habits, and condition of the vehicle.

**Average Fuel Economy (2)**

- The average fuel economy is calculated by the total driving distance and fuel consumption since the last average fuel economy reset.
  - Fuel economy range: 0.0 ~ 99.9 MPG or L/100km
- The average fuel economy can be reset both manually and automatically.

**Manual reset**

To clear the average fuel economy manually, press the SELECT/RESET button on the steering wheel for more than 1 second when the average fuel economy is displayed.
Features of your vehicle

**Automatic reset**
To make the average fuel economy be reset automatically whenever refueling, select the "Auto Reset" mode in User Setting menu of the LCD display (Refer to "LCD Display").
Under "Auto Reset" mode, the average fuel economy will be cleared to zero (--) when the vehicle speed exceeds 1 km/h after refueling more than 1.6 gallons (6 liters).

**Instant Fuel Economy (3)**
- This mode displays the instant fuel economy during the last few seconds when the vehicle speed is more than 6.2 MPH (10 km/h).
- Fuel economy range: 0 ~ 50 MPG or 0 ~ 30 L/100km

**Trip A/B**

**Tripmeter (1)**
- The tripmeter is the total driving distance since the last tripmeter reset.
  - Distance range: 1 ~ 9999.9 mi. or km
- To reset the tripmeter, press the SELECT/RESET button on the steering wheel for more than 1 second when the tripmeter is displayed.
Features of your vehicle

**Average Vehicle Speed (2)**
- The average vehicle speed is calculated by the total driving distance and driving time since the last average vehicle speed reset.
  - Speed range: 0 ~ 999 MPH or km/h
- To reset the average vehicle speed, press the SELECT/RESET button on the steering wheel for more than 1 second when the average vehicle speed is displayed.

**NOTICE**
- The average vehicle speed is not displayed if the driving distance is less than 0.03 miles (50 meters) or the driving time is less than 10 seconds since the ignition switch or Engine Start/Stop button is turned to ON.
- Even if the vehicle is not in motion, the average vehicle speed keeps going while the engine is running.

**Elapsed Time (3)**
- The elapsed time is the total driving time since the last elapsed time reset.
  - Time range (hh:mm): 00:00 ~ 99:59
- To reset the elapsed time, press the SELECT/RESET button on the steering wheel for more than 1 second when the elapsed time is displayed.

**NOTICE**
- Even if the vehicle is not in motion, the elapsed time keeps going while the engine is running.

**Digital Speedometer**
- This message shows the speed of the vehicle (in mph.).
Driving information mode (if equipped)

This display shows trip distance (1), average fuel economy (2) and the vehicle range that can be driven with the remaining fuel (3). This information is displayed for a few seconds when you turn off the engine and then goes off automatically. The information provided is calculated according to each trip. If the estimated distance is below 1 mi. (1km), the distance to empty (3) will display as "----" and a refuel message will appear (4).

* NOTICE
If "Window Open" or "Sunroof Open" warning message are displayed in the cluster, this display may not be displayed in the cluster.
WARNING AND INDICATOR LIGHTS

Warning lights

* NOTICE - Warning lights

Make sure that all warning lights are OFF after starting the engine. If any light is still ON, this indicates a situation that needs attention.

Air bag Warning Light

This warning light illuminates:

- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 6 seconds and then goes off.
- When there is a malfunction with the SRS.
  In this case, have your vehicle inspected by an authorized HYUNDAI dealer.

Seat Belt Warning Light

This warning light informs the driver that the seat belt is not fastened.
For more details, refer to the “Seat Belts” in chapter 3.
Features of your vehicle

Parking Brake & Brake Fluid Warning Light

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds
  - It remains on if the parking brake is applied.
- When the parking brake is applied.
- When the brake fluid level in the reservoir is low.
  - If the warning light illuminates with the parking brake released, it indicates the brake fluid level in reservoir is low.

If the brake fluid level in the reservoir is low:
1. Drive carefully to the nearest safe location and stop your vehicle.
2. With the engine stopped, check the brake fluid level immediately and add fluid as required (For more details, refer to "Brake Fluid" in chapter 7).

Then check all brake components for fluid leaks. If any leak on the brake system is still found, the warning light remains on, or the brakes do not operate properly, do not drive the vehicle.

In this case, have your vehicle towed to an authorized HYUNDAI dealer and inspected.

Dual-diagonal braking system

Your vehicle is equipped with dual-diagonal braking systems. This means you still have braking on two wheels even if one of the dual systems should fail.

With only one of the dual systems working, more than normal pedal travel and greater pedal pressure are required to stop the vehicle.

Also, the vehicle will not stop in as short a distance with only a portion of the brake system working.

If the brakes fail while you are driving, shift to a lower gear for additional engine braking and stop the vehicle as soon as it is safe to do so.
**Features of your vehicle**

---

**WARNING - Parking Brake & Brake Fluid Warning Light**

Driving the vehicle with a warning light ON is dangerous. If the Parking Brake & Brake Fluid Warning Light illuminates with the parking brake released, it indicates that the brake fluid level is low.

In this case, have your vehicle inspected by an authorized HYUNDAI dealer.

---

**Anti-lock Brake System (ABS) Warning Light**

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.
- When there is a malfunction with the ABS (The normal braking system will still be operational without the assistance of the anti-lock brake system).

In this case, have your vehicle inspected by an authorized HYUNDAI dealer.

---

**Electronic Brake force Distribution (EBD) System Warning Light**

These two warning lights illuminate at the same time while driving:
- When the ABS and regular brake system may not work normally.
  In this case, have your vehicle inspected by an authorized HYUNDAI dealer.

---

**WARNING - Electronic Brake force Distribution (EBD) System Warning Light**

When both ABS and Parking Brake & Brake Fluid Warning Lights are on, the brake system will not work normally and you may experience an unexpected and dangerous situation during sudden braking.

In this case, avoid high speed driving and abrupt braking.
Have your vehicle inspected by an authorized HYUNDAI dealer as soon as possible.
Features of your vehicle

**NOTICE - Electronic Brake force Distribution (EBD) System Warning Light**

When the ABS Warning Light is on or both ABS and Parking Brake & Brake Fluid Warning Lights are on, the speedometer, odometer, or trip-meter may not work. Also, the EPS Warning Light may illuminate and the steering effort may increase or decrease. In this case, have your vehicle inspected by an authorized HYUNDAI dealer as soon as possible.

**Electronic Parking Brake (EPB) Warning Light (if equipped)**

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.
- When there is a malfunction with the EPB.
In this case, have your vehicle inspected by an authorized HYUNDAI dealer.

**NOTICE - Electronic Parking Brake (EPB) Warning Light**

The Electronic Parking Brake (EPB) Warning Light may illuminate when the Electronic Stability control (ESC) Indicator Light comes on to indicate that the ESC is not working properly (This does not indicate malfunction of the EPB).

**Electronic Power Steering (EPS) Warning Light**

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It remains on until the engine is started.
- When there is a malfunction with the EPS.
In this case, have your vehicle inspected by an authorized HYUNDAI dealer.
**Features of your vehicle**

### Malfunction Indicator Lamp (MIL)

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It remains on until the engine is started.
- When there is a malfunction with the emission control system.
In this case, have your vehicle inspected by an authorized HYUNDAI dealer.

**CAUTION - Malfunction Indicator Lamp (MIL)**

Driving with the Malfunction Indicator Lamp (MIL) on may cause damage to the emission control systems which could effect drivability and/or fuel economy.

### Charging System Warning Light

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It remains on until the engine is started.
- When there is a malfunction with either the alternator or electrical charging system.

**CAUTION - Gasoline Engine**

If the Malfunction Indicator Lamp (MIL) illuminates, potential catalytic converter damage is possible which could result in loss of engine power. In this case, have your vehicle inspected by an authorized HYUNDAI dealer as soon as possible.
If there is a malfunction with either the alternator or electrical charging system:

1. Drive carefully to the nearest safe location and stop your vehicle.
2. Turn the engine off and check the alternator drive belt for looseness or breakage.
   If the belt is adjusted properly, there may be a problem in the electrical charging system.
   In this case, have your vehicle inspected by an authorized HYUNDAI dealer as soon as possible.

**Engine Oil Pressure Warning Light**

This warning light illuminates:

- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It remains on until the engine is started.
- When the engine oil pressure is low.

If the engine oil pressure is low:

1. Drive carefully to the nearest safe location and stop your vehicle.
2. Turn the engine off and check the engine oil level (For more details, refer to “Engine Oil” in section 7). If the level is low, add oil as required.
   If the warning light remains on after adding oil or if oil is not available, have your vehicle inspected by an authorized HYUNDAI dealer as soon as possible.

**CAUTION - Engine Oil Pressure Warning Light**

- If the engine does not stop immediately after the Engine Oil Pressure Warning Light is illuminated, severe damage could result.
- If the warning light stays on while the engine is running, it indicates that there may be serious engine damage or malfunction. In this case,
  1. Stop the vehicle as soon as it is safe to do so.
  2. Turn off the engine and check the oil level. If the oil level is low, fill the engine oil to the proper level.
  3. Start the engine again. If the warning light stays on after the engine is started, turn the engine off immediately.
   In this case, have your vehicle inspected by an authorized HYUNDAI dealer.
**Features of your vehicle**

**Low Fuel Level Warning Light**

This warning light illuminates:
When the fuel tank is nearly empty.

If the fuel tank is nearly empty:
Add fuel as soon as possible.

⚠️ **CAUTION - Low Fuel Level**

*Driving with the Low Fuel Level warning light on or with the fuel level below "E" can cause the engine to misfire and damage the catalytic converter (if equipped)*.

**Low Tire Pressure Warning Light**

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.
- When one or more of your tires are significantly underinflated.
  The location of the underinflated tires are displayed on the LCD display. (if equipped)

For more details, refer to "Tire Pressure Monitoring System (TPMS)" in chapter 6.

This warning light remains on after blinking for approximately 60 seconds or repeats blinking and off at the intervals of approximately 3 seconds:
- When there is a malfunction with the TPMS.
  In this case, have your vehicle inspected by an authorized HYUNDAI dealer as soon as possible.

For more details, refer to "Tire Pressure Monitoring System (TPMS)" in chapter 6.
Features of your vehicle

⚠️ WARNING - Low tire pressure
- Significantly low tire pressure makes the vehicle unstable and can contribute to loss of vehicle control and increased braking distances.
- Continued driving or low pressure tires will cause the tires to overheat and fail.

⚠️ WARNING - Safe Stopping
- The TPMS cannot alert you to severe and sudden tire damage caused by external factors.
- If you notice any vehicle instability, immediately take your foot off the accelerator pedal, apply the brakes gradually with light force, and slowly move to a safe position off the road.

Automatic Emergency Braking (AEB) Warning light (if equipped)
This indicator light illuminates:
- When there is a malfunction with the AEB.
In this case, have your vehicle inspected by an authorized HYUNDAI dealer.
For more information, refer to "Automatic Emergency Braking (AEB)" in chapter 5.

All Wheel Drive (AWD) Warning Light (if equipped)
This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
- It illuminates for approximately 3 seconds and then goes off.
- When there is a malfunction with the AWD system.
In this case, have your vehicle inspected by an authorized HYUNDAI dealer.
Adaptive Front Lighting System (AFLS) Warning Light (if equipped)

This warning light blinks:
- When there is a malfunction with the AFLS.

If there is a malfunction with the AFLS:
1. Drive carefully to the nearest safe location and stop your vehicle.
2. Turn the engine off and restart the engine. If the warning light remains on, have your vehicle inspected by an authorized HYUNDAI dealer.

Indicator Lights

Electronic Stability Control (ESC) Indicator Light

This indicator light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
- It illuminates for approximately 3 seconds and then goes off.
- When there is a malfunction with the ESC system.
In this case, have your vehicle inspected by an authorized HYUNDAI dealer.

This indicator light blinks:
While the ESC is operating.

For more details, refer to “Electronic Stability Control (ESC)” in chapter 5.

Electronic Stability Control (ESC) OFF Indicator Light

This indicator light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
- It illuminates for approximately 3 seconds and then goes off.
- When you deactivate the ESC system by pressing the ESC OFF button.

For more details, refer to “Electronic Stability Control (ESC)” in chapter 5.
Features of your vehicle

**ECO Indicator Light (if equipped)**

This indicator light illuminates:
- When you activate the Active ECO system by pressing the Active ECO button.

For more details, refer to "Active ECO System" in chapter 5.

**SPORT Mode Indicator Light (if equipped)**

This indicator light illuminates
- When you select SPORT mode as drive mode.
For more details, refer to "Drive Mode Integrated Control System" in chapter 5.

**Immobilizer Indicator Light (Without Smart Key) (if equipped)**

This indicator light illuminates:
- When the vehicle detects the immobilizer in your key properly while the ignition switch is ON.
  - At this time, you can start the engine.
  - The indicator light goes off after starting the engine.

This indicator light blinks:
- When there is a malfunction with the immobilizer system.
In this case, have your vehicle inspected by an authorized HYUNDAI dealer.
**Features of your vehicle**

**Immobilizer Indicator Light (With Smart Key) (if equipped)**

This indicator light illuminates for up to 30 seconds:
- When the vehicle detects the smart key in the vehicle properly while the Engine Start/Stop Button is ACC or ON.
  - At this time, you can start the engine.
  - The indicator light goes off after starting the engine.

This indicator light blinks for a few seconds:
- When the smart key is not in the vehicle.
  - At this time, you can not start the engine.

This indicator light illuminates for 2 seconds and goes off:
- When the vehicle can not detect the smart key which is in the vehicle while the Engine Start/Stop Button is ON.
  In this case, have your vehicle inspected by an authorized HYUNDAI dealer.

**Turn Signal Indicator Light**

This indicator light blinks:
- When using the turn signals.

If any of the following occurs, there may be a malfunction with the turn signal system. In this case, have your vehicle inspected by an authorized HYUNDAI dealer.

- The indicator light does not blink but illuminates.
- The indicator light blinks more rapidly.
- The indicator light does not illuminate at all.

This indicator light blinks:
- When the battery of the smart key is weak.
  - At this time, you can not start the engine. However, you can start the engine if you press the Engine Start/Stop Button with the smart key. (For more details, refer to “Starting the Engine” in section 5).
- When there is a malfunction with the immobilizer system.
  In this case, have your vehicle inspected by an authorized HYUNDAI dealer.
Features of your vehicle

**High Beam Indicator Light**

This indicator light illuminates:
- When the headlights are on and in the high beam position
- When the turn signal lever is pulled into the Flash-to-Pass position.

**Smart High Beam indicator (if equipped)**

This warning light illuminates:
- When the high-Beam is on with the light switch in the AUTO light position.
- If your vehicle detects oncoming or preceding vehicles, the Smart High Beam system will switch the high beam to low beam automatically.

For more details, refer to "Smart High Beam" in this chapter.

**Light ON Indicator Light**

This indicator light illuminates:
- When the tail lights or headlights are on.

**Front Fog Indicator Light (if equipped)**

This indicator light illuminates:
- When the front fog lights are on.

**AUTO HOLD Indicator Light (if equipped)**

This indicator light illuminates:
- [White] When you activate the auto hold system by pressing the AUTO HOLD button.
- [Green] When you stop the vehicle completely by depressing the brake pedal with the auto hold system activated.
- [Yellow] When there is a malfunction with the auto hold system.

In this case, have your vehicle inspected by an authorized HYUNDAI dealer.

For more details, refer to "Auto Hold" in chapter 5.
All Wheel Drive (AWD) LOCK Indicator Light (if equipped)

This indicator light illuminates:
• Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.
• When you select AWD Lock mode by pressing the AWD LOCK button.
  - The AWD LOCK mode is to increase the drive power when driving on wet pavement, snow covered roads and/or off-road.

CAUTION - AWD Lock Mode
Do not use AWD LOCK mode on dry paved roads or highway, it can cause noise, vibration or damage of AWD related parts.

Cruise Indicator Light (if equipped)

This indicator light illuminates:
• When the cruise control system is enabled.

For more details, refer to “Cruise Control System” in section 5.

Cruise SET Indicator Light (if equipped)

This indicator light illuminates:
• When the cruise control speed is set.

For more details, refer to “Cruise Control System” in section 5.

Downhill Brake Control (DBC) Indicator Light

This warning light illuminates:
• Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.
• When you activate the DBC system by pressing the DBC button.

This warning light blinks:
• When the DBC is operating.

This warning light illuminates yellow:
• When there is a malfunction with the DBC system.
In this case, have the vehicle inspected by an authorized HYUNDAI dealer.

For more details, refer to “Downhill Brake Control (DBC) System” in chapter 5.
Features of your vehicle

DRIVE ASSIST SYSTEM

Rear parking assist system (if equipped)

The rear parking assist system assists the driver during backward movement of the vehicle by chiming if any object is sensed within a distance of 47 in. (120 cm) behind the vehicle. This system is a supplemental system and it is not intended to nor does it replace the need for extreme care and attention by the driver. The sensing range and objects detectable by the back sensors are limited. Whenever backing up, pay as much attention to what is behind you as you would in a vehicle without a rear parking assist system.

WARNING

The rear parking assist system is a supplementary function only. The operation of the rear parking assist system can be affected by several factors (including environmental conditions). It is the responsibility of the driver to always check the area behind the vehicle before and while backing up.

Operation of the rear parking assist system

Operating condition

- This system will activate when the indicator on the rear parking assist OFF button is not illuminated.
If you desire to deactivate the rear parking assist system, press the rear parking assist OFF button again. (The indicator on the button will illuminate.) To turn the system on, press the button again. (The indicator on the button will go off.)

- This system will activate when backing up with the ignition switch ON.
- If the vehicle is moving at a speed over 6mph (10km/h), the system may not be activated correctly.
- The sensing distance while the rear parking assist system is in operation is approximately 47 in. (120 cm).
- When more than two objects are sensed at the same time, the closest objects will be recognized first.

**Types of warning sound**
- When an object is 47 in. to 24 in. (120 cm to 61 cm) from the rear bumper: Buzzer beeps intermittently.
- When an object is 23 in. to 12 in. (60 cm to 31 cm) from the rear bumper: Buzzer beeps more frequently.
- When an object is within 11.8 in. (30 cm) of the rear bumper: Buzzer sounds continuously.

**Non-operational conditions of rear parking assist system**

The rear parking assist system may not operate properly when:

1. Moisture is frozen to the sensor. (It will operate normally when the moisture has been cleared.)
2. The sensor is covered with foreign matter, such as snow or water, or the sensor cover is blocked. (It will operate normally when the material is removed or the sensor is no longer blocked.)
3. Driving on uneven road surfaces (unpaved roads, gravel, bumps, gradient).
4. Objects generating excessive noise (vehicle horns, loud motorcycle engines, or truck air brakes) are within range of the sensor.
5. Heavy rain or water spray exists.
6. Wireless transmitters or mobile phones are within range of the sensor.
7. Trailer towing.
The detecting range may decrease when:
1. The sensor is covered with foreign matter such as snow or water. (The sensing range will return to normal when removed.)
2. Outside air temperature is extremely hot or cold.

The following objects may not be recognized by the sensor:
1. Sharp or slim objects such as ropes, chains or small poles.
2. Objects which tend to absorb the sensor frequency such as clothes, spongy material or snow.
3. Undetectable objects smaller than 40 in. (1 m) and narrower than 6 in. (14 cm) in diameter.

**Rear parking assist system precautions**
- The rear parking assist system may not sound sequentially depending on the speed and shapes of the objects detected.
- The rear parking assist system may malfunction if the vehicle bumper height or sensor installation has been modified or damaged. Any non-factory installed equipment or accessories may also interfere with the sensor performance.
- The sensor may not recognize objects less than 15 in. (40 cm) from the sensor, or it may sense an incorrect distance. Use caution.
- When the sensor is frozen or covered with snow, dirt, or water, the sensor may be inoperative until any debris is removed and the sensors are cleaned. Use only a soft cloth to clean the sensors.
- Do not push, scratch or strike the sensor. Sensor damage could occur.

**NOTICE**
This system can only sense objects within the range and location of the sensors; it can not detect objects in other areas where sensors are not installed. Also, small or slim objects, such as poles or objects located between sensors may not be detected by the sensors. Always visually check behind the vehicle when backing up. Be sure to inform any drivers of the vehicle that may be unfamiliar with the system regarding the systems capabilities and limitations.
Self-diagnosis (if equipped)
When you shift the gear to the R (Reverse) position and if one or more of the below occurs you may have a malfunction in the rear parking assist system.

- You don't hear an audible warning sound or if the buzzer sounds intermittently.

If this occurs, have your vehicle checked by an authorized HYUNDAI dealer as soon as possible.

⚠️ WARNING
Your new vehicle warranty does not cover any accidents or damage to the vehicle or injuries to its occupants due to a rear parking assist system malfunction. Always drive safely and cautiously.
**Rear view camera (if equipped)**

The Rear View Camera will activate when the engine is running and the shift lever is in the R (Reverse) position.

This is a supplemental system that provides a view of the area behind the vehicle through the A/V display while the vehicle is in the R (Reverse) position.

**⚠️ WARNING**

The Rear View Camera is not a safety device. It only serves to assist the driver in identifying objects directly behind the middle of the vehicle. The camera does NOT cover the complete area behind the vehicle.

**⚠️ WARNING**

- Never rely solely on the Rear View Camera when backing-up.
- ALWAYS look around your vehicle to make sure there are no objects or obstacles before moving the vehicle in any direction to prevent a collision.
- Always pay close attention when the vehicle is driven close to objects, particularly pedestrians, and especially children.

**👀 NOTICE**

Always keep the camera lens clean. The camera may not work normally if the lens is covered with dirt or snow.
Multi-view Camera System (if equipped)

Operating conditions
- When the Engine Start/Stop button is in the ON position
- When the transaxle is on D, N or R
- When vehicle speed is not over 12 mph (20 km/h) driving forward.
- When vehicle speed is not over 6 mph (10 km/h) driving backward.

NOTICE
• When vehicle speed is over 12 mph (20 km/h), the Multi-view Camera System will turn off. The system will not automatically turn on again, even though vehicle speed gets below 12 mph (20 km/h). Push the button again, to turn on the system.
• When the vehicle is backing up, the Multi-view Camera System will turn ON regardless of vehicle speed or button status. However, if vehicle speed is over 6 mph (10 km/h) when driving backward, the system will turn off.
• A warning appears on the system when:
  - The liftgate (tailgate) is opened
  - The driver's door is opened
  - The passenger's door is opened
• If the Multi-view Camera System is not operating normally, the system should be checked by an authorized HYUNDAI dealer.

CAUTION
• Multi-view Camera System only serves to assist the driver in parking. ALWAYS look around your vehicle to make sure there are no objects or obstacles before moving the vehicle.
• Always keep the camera lens clean. The camera may not work normally if the lens is covered with foreign material.

For more details, please refer to the separate manual that was supplied with your vehicle.
The hazard warning flasher should be used whenever you find it necessary to stop the car in a hazardous location. When you must make such an emergency stop, always pull off the road as far as possible.

The hazard warning lights are turned on by pushing in the hazard switch. This causes all turn signal lights to blink. The hazard warning lights will operate even though the key is not in the ignition switch.

To turn the hazard warning lights off, push the switch a second time.
LIGHTING

Battery saver function
- The purpose of this feature is to prevent the battery from being discharged. The system automatically turns off the parking lights when the driver removes the ignition key (smart key: turns off the engine) and opens the driver-side door.
- With this feature, the parking lights will be turned off automatically if the driver parks on the side of the road at night.

If necessary, to keep the lights on when the ignition key is removed (smart key: turns off the engine), perform the following:
1) Open the driver-side door.
2) Turn the parking lights OFF and ON again using the light switch on the steering column.

Headlamp delay
If you turn the ignition switch to the ACC or OFF position with the headlights ON, the headlights remain on for about 5 minutes. However, if the driver's door is opened and closed, the headlights are turned off after 15 seconds.

The headlights can be turned off by pressing the lock button on the transmitter (or smart key) twice or turning the light switch to the OFF or Auto position.

However, if you turn the light switch to the Auto position when it is dark outside, the headlights will not be turned off.

You can activate or deactivate this feature. Refer to “User Settings” in this section.

⚠️ CAUTION
If the driver gets out of the vehicle through other doors (other than the driver's door), the battery saver function does not operate and the headlamp delay does not turn off automatically. This will cause the battery to be discharged. In this case, make sure to turn off the lamp before getting out of the vehicle.
**Lighting control**

To operate the lights, turn the knob at the end of the control lever to one of the following positions:

1. DRL OFF position
2. AUTO light position
3. Parking light position
4. Headlight position

**Daytime running light (DRL) (if equipped)**

The Daytime Running Lights (DRL) can make it easier for others to see the front of your vehicle during the day, especially after dawn and before sunset.

The DRL will turn off when:
- **Type A**
  1. The light switch is not in the AUTO position.
  2. The light switch is in the headlight position.
  3. The parking brake is applied.
  4. The engine is turned off.
- **Type B**
  1. The light switch is not in DRL position.
  2. The light switch is in the headlight position.
  3. The parking brake is applied.
  4. The engine is turned off.

- **Type C**
  1. The light switch is not in DRL position.
  2. The light switch is in the headlight position.
  3. The parking brake is applied.
  4. The engine is turned off.
Features of your vehicle

**AUTO light position (if equipped)**

When the light switch is in the AUTO light position, the taillights and head-lights will be turned ON or OFF automatically depending on the amount of light outside the vehicle.

Even with the AUTO light feature in operation, it is recommended to manually turn ON the lamps when driving at night or in a fog, or when you enter dark areas, such as tunnels and parking facilities.

---

**CAUTION**

- Never place anything over sensor (1) located on the instrument panel. This will ensure better AUTO light system control.
- Don’t clean the sensor using a window cleaner. The cleaner may leave a light film which could interfere with sensor operation.
- If your vehicle has window tint or other types of metallic coating on the front windshield, the AUTO light system may not work properly.

---

**Parking light position (EDGE)**

When the light switch is in the parking light position, the tail, position, license plate lights and the tail light indicator will turn on.
Features of your vehicle

**Headlight position ( ⚡ )**

When the light switch is in the headlight position, the head, tail, license and instrument panel lights will turn on.

※ **NOTICE**
The ignition switch must be in the ON position to turn on the headlights.

**High beam operation**

To turn on the high beam headlamp, push the lever away from you. The lever will return to its original position. The high beam indicator will light when the headlight high beams are switched on.

To prevent the battery from being discharged, do not leave the lights on for a prolonged time while the engine is not running.

⚠️ **WARNING**
Do not use the high beams when there are other vehicles. Using high beam could obstruct the other driver's vision.
To flash the headlights, pull the lever towards you. It will return to the normal (low beam) position when released. The headlight switch does not need to be on to use this flashing feature.

**Turn signals and lane change signals**

To signal a lane change, move the turn signal lever slightly and hold it in position (B). The lever will return to the OFF position when released.

If an indicator stays on and does not flash or if it flashes abnormally, one of the turn signal bulbs may be burned out and will require replacement.

The ignition switch must be on for the turn signals to function. To turn on the turn signals, move the lever up or down (A). Green arrow indicators on the instrument panel indicate which turn signal is operating. They will self-cancel after a turn is completed. If the indicator continues to flash after a turn, manually return the lever to the OFF position.
Features of your vehicle

**One Touch Turn Signal**
To activate the one-touch lane change function, move the turn signal lever slightly and then release it. The lane change signals will blink 3 (5 or 7, if equipped) times.

You can activate/deactivate the One Touch Turn Signal function or choose the number of blinking (3, 5, or 7) from the User Settings Mode on the LCD display (if equipped).

⚠️ **NOTICE**
If an indicator flash is abnormally quick or slow, a bulb may be burned out or have a poor electrical connection in the circuit.

---

**Front fog light (if equipped)**

Fog lights are used to provide illumination close to the road surface when visibility is poor due to fog, rain or snow, etc.
1. Turn on the park light.
2. Turn the light switch (1) to the front fog light position.
3. To turn off the front fog light, turn the light switch to the front fog light position again or turn off the park light.

⚠️ **CAUTION**
When in operation, the fog lights consume large amounts of vehicle electrical power. Only use the fog lights when visibility is poor or unnecessary battery and generator drain could occur.
**Smart High Beam (if equipped)**

The Smart High Beam is a system that automatically adjusts the headlamp range (switches between high beam and low beam) according to the brightness of other vehicles and road conditions.

**Operating condition**

1. Place the light switch in the AUTO position.
2. Turn on the high beam by pushing the lever away from you. The smart high beam (ające) indicator will illuminate.
3. The Smart High Beam will turn on when vehicle speed is above 28 mph (45km/h).
   - If the lever is pushed away when the Smart High Beam is operating, the Smart High Beam will turn off and the high beam will be on continuously. The smart high beam (้า) indicator will turn off.
   - If the lever is pulled towards you when the Smart High Beam is operating, the Smart High Beam will turn off.
4. If the light switch is placed to the headlamp position, the Smart High Beam will turn off and the low beam will be on continuously.

The high beam switches to low beam in the below conditions:
- When the Smart High Beam is off.
- When the light switch is not in the AUTO position.
- When a headlamp is detected from approaching vehicle.
- When tail lamp is detected from the front vehicle.
- When the ambient light is bright enough that high beams are not needed.
- When streetlights or other lights are detected.
- When vehicle speed is below 22 mph (35km/h).
Warning light and message

When the Smart High Beam Assist System is not working properly, the warning message above will come on for a few seconds.

After the message disappears, the master warning light will illuminate. Take your vehicle to an authorized HYUNDAI dealer and have the system checked.

⚠️ CAUTION

The system may not operate normally in the following conditions:

- When lights from an on-coming vehicle is not detected because of lamp damage, the light is blocked, etc.
- When the lights of the on-coming vehicle are covered with dust, snow or water.
- When the lights from an on-coming is not detected because of smoke, fog, snow, etc.
- When the front window is covered with foreign matter such as ice, dust, fog, or is damaged.
- In poor visibility due to fog, heavy rain or snow.
- When headlamp aiming is not properly adjusted.
- When driving on a narrow curved road or rough road.

(Continued)
(Continued)

- When driving downhill or uphill.
- When only part of the oncoming vehicle is visible on a crossroad or curved road.
- When there is a traffic light, reflecting sign, flashing sign or mirror.
- When the road conditions are poor such as being wet or covered with snow.
- When the oncoming vehicle’s headlamps are off but the fog lamps on.
- When a vehicle suddenly appears from a curve.

(Continued)

- When the oncoming vehicle is tilted from a flat tire is being towed.
- When the LDWS (Lane Departure Warning System) warning light illuminates. (if equipped)

⚠️ WARNING

- Do not place any accessories, stickers or tint on the windshield.
- Have the windshield glass replaced at an authorized dealer.
- Do not remove or impact related parts of the Smart High Beam system.
- Be careful that water doesn’t get into the Smart High Beam unit.
- Do not place objects on the dashboard that reflect light such as mirrors, white paper, etc. The system may malfunction if sunlight is reflected.
- At times, the Smart High Beam system may not work properly, always check the road conditions for your safety. When the system does not operate normally, manually change between the high beam and low beam.
Adaptive Front Lighting System (AFLS) (if equipped)

Adaptive front lighting system uses the steering angle and vehicle speed, to keep your field of vision wide by swiveling and leveling the headlamp.

Change the switch to the AUTO position when the engine is running. The adaptive front lighting system will operate when the headlamp is ON. To turn off the AFLS, change the switch to other positions. After turning the AFLS off, headlamp swiveling no longer occurs, but leveling operates continuously.

If the AFLS malfunction indicator comes on, the AFLS is not working properly. Drive to the nearest safe location and restart the engine. If the indicator continuously remains on, take your vehicle to an authorized HYUNDAI dealer and have the system checked.
Wipers and washers

A : Wiper speed control
- MIST - Single wipe
- OFF - Off
- INT - Intermittent wipe
- AUTO* - Auto control wipe
- LO - Low wiper speed
- HI - High wiper speed

B : Intermittent wipe time adjustment

C : Wash with brief wipes (front)

D : Rear wiper/washer control
- HI - High wiper speed
- LO - Low wiper speed
- OFF - Off

E : Wash with brief wipes (rear)

Windshield wipers

Operates as follows when the ignition switch is turned ON.

MIST : For a single wiping cycle, move the lever to this (MIST) position and release it. The wipers will operate continuously if the lever is held in this position.

OFF : Wiper is not in operation

INT : Wiper operates intermittently at the same wiping intervals. Use this mode in a light rain or mist. To vary the speed setting, turn the speed control knob.

LO : Normal wiper speed
HI : Fast wiper speed
Features of your vehicle

✽ NOTICE
If there is heavy accumulation of snow or ice on the windshield, defrost the windshield for about 10 minutes, or until the snow and/or ice is removed before using the windshield wipers to ensure proper operation.

✽ NOTICE
• When you operate the wipers, if your vehicle has a problem in any part of the wiper operation system, the wiper may operate in the LO mode regardless of the wiper switch position. In this case, have your vehicle checked by an authorized HYUNDAI dealer as soon as possible.
• When the ignition key is removed, the wiper blade sometimes may move slightly for reducing the deterioration of the windshield wipers.

Auto control (if equipped)
The rain sensor located on the upper end of the windshield glass senses the amount of rainfall and controls the wiping cycle for the proper interval. The more it rains, the faster the wiper operates.

When the rain stops, the wiper stops.
To vary the speed setting, turn the speed control knob (1).
If the wiper switch is set in AUTO mode when the ignition switch is ON, the wiper will operate once to perform a self-check of the system. Set the wiper to OFF position when the wiper is not in use.

⚠️ CAUTION
When the ignition switch is ON and the windshield wiper switch is placed in the AUTO mode, use caution in the following situations to avoid any injury to the hands or other parts of the body:
• Do not touch the upper end of the windshield glass facing the rain sensor.
• Do not wipe the upper end of the windshield glass with a damp or wet cloth.
• Do not put pressure on the windshield glass.
CAUTION
When washing the vehicle, set the wiper switch in the OFF position to stop the auto wiper operation.
The wiper may operate and be damaged if the switch is set in the AUTO mode while washing the vehicle.
Do not remove the sensor cover located on the upper end of the passenger side windshield glass. Damage to system parts could occur and may not be covered by your vehicle warranty.
When starting the vehicle in winter, set the wiper switch in the OFF position. Otherwise, wipers may operate and ice may damage the windshield wiper blades. Always remove all snow and ice and defrost the windshield properly prior to operating the windshield wipers.

Windshield washers

In the OFF position, pull the lever gently toward you to spray washer fluid on the windshield and to run the wipers 1-3 cycles.
Use this function when the windshield is dirty.
The spray and wiper operation will continue until you release the lever.
If the washer does not work, check the washer fluid level. If the fluid level is not sufficient, you will need to add appropriate non-abrasive windshield washer fluid to the washer reservoir.

The reservoir filler neck is located in the front of the engine compartment on the passenger side.

CAUTION
To prevent possible damage to the washer pump, do not operate the washer when the fluid reservoir is empty.

WARNING
Do not use the washer in freezing temperatures without first warming the windshield with the defrosters; the washer solution could freeze on the windshield and obscure your vision.
Features of your vehicle

**CAUTION**

- To prevent possible damage to the wipers or windshield, do not operate the wipers when the windshield is dry.
- To prevent damage to the wiper blades, do not use gasoline, kerosene, paint thinner, or other solvents on or near them.
- To prevent damage to the wiper arms and other components, do not attempt to move the wipers manually.

**Rear window wiper and washer switch**

The rear window wiper and washer switch is located at the end of the wiper and washer switch lever. Turn the switch to the desired position to operate the rear wiper and washer.

- HI : High wiper speed
- LO : Low wiper speed
- OFF : Off

Push the lever away from you to spray rear washer fluid and to run the rear wipers 1~3 cycles. The spray and wiper operation will continue until you release the lever.
INTERIOR LIGHT

⚠️ CAUTION
Do not use the interior lights for extended periods when the engine is not running. It may cause battery discharge.

⚠️ WARNING
Do not use the interior lights when driving in the dark. Accidents could happen because the view may be obscured by interior lights.

Automatic turn off function
The interior lights automatically turn off approximately 20 minutes after the ignition switch is turned off.
If your vehicle is equipped with the theft alarm system, the interior lights automatically turn off approximately 5 seconds after the system is in the armed stage.

Press the lens (1) to turn the map lamp on or off
- ON (2): The map lamp and room lamp stays on at all times.
- OFF/ ⬜️ (3): The lamps are off even if a door is opened.
- ROOM/ ☀️ (4): The map lamp and room lamp stays on at all times.
Features of your vehicle

- **DOOR / (5):**
  - The map lamp and room lamp comes on when doors are unlocked with a transmitter or smart key as long as the doors are closed. The lamps go out after approximately 30 seconds.
  - The map lamp and room lamp comes on for approximately 30 seconds when doors are unlocked with a transmitter or smart key as long as the doors are not opened.
  - The map lamp and room lamp will stay on for approximately 20 minutes if a door is opened with the ignition switch in the ACC or LOCK/OFF position.
  - The map lamp and room lamp will stay on continuously if the door is opened with the ignition switch in the ON position.
  - The map lamp and room lamp will go out immediately if the ignition switch is changed to the ON position or all doors are locked.

*NOTICE*
When the lamp is turned on by pressing the lens (1), the lamp does not turn off even if the switch is in the OFF position (3).

Room lamp

Press the button to turn the light on or off.
Features of your vehicle

Luggage room lamp

- **ON**: The luggage room lamp stays on at all times.
- **DOOR**: The luggage room lamp comes on when the liftgate (tailgate) is opened.
- **OFF**: The luggage room lamp is off.

Vanity mirror lamp (if equipped)

Pull the sunvisor downward and you can turn the vanity mirror lamp ON or OFF by pushing the button.
- **ON**: To turn the lamp ON.
- **OFF**: To turn the lamp OFF.

CAUTION

To prevent unnecessary battery drain, turn off the lamp by pushing the **ON** button after using the lamp.
Features of your vehicle

**WELCOME SYSTEM**

**Headlamp welcome**
When the headlight (light switch in the headlight or AUTO position) is on and all doors (and liftgate (tailgate)) are locked and closed, the headlight, position light and tail light will come on for 15 seconds if any of the below is performed.

- Without smart key system
  - When the door unlock button is pressed on the transmitter.
- With the smart key system
  - When the door unlock button is pressed on the smart key.

At this time, if you press the door lock button (on the transmitter or smart key), the lights will turn off immediately.

**Interior light**
When the interior light switch is in the DOOR position and all doors (and liftgate (tailgate)) are locked and closed, the room lamp will come on for 30 seconds if any of the below is performed.

- Without smart key system
  - When the door unlock button is pressed on the transmitter.
- With the smart key system
  - When the door unlock button is pressed on the smart key.
  - When the button of the outside door handle is pressed.

At this time, if you press the door lock button, the lamps will turn off immediately.

**Puddle lamp and pocket lamp (if equipped)**
When all doors are locked and closed, the puddle lamp and pocket lamp will come on for 15 seconds if any of the below is performed.

- Without smart key system
  - When the door unlock button is pressed on the transmitter.
- With the smart key system
  - When the door unlock button is pressed on the smart key.
  - When the button of the outside door handle is pressed.
  - When the vehicle is approached with the smart key in possession.

At this time, if you press the door lock button, the lamps will turn off immediately.
DEFROSTER

**CAUTION**
To prevent damage to the conductors bonded to the inside surface of the rear window, never use sharp instruments or window cleaners containing abrasives to clean the window.

**NOTICE**
If you want to defrost and defog the front windshield, refer to “Windshield defrosting and defogging” in this section.

Rear window defroster

To activate the rear window defroster, press the rear window defroster button located in the center facia switch panel.

The indicator on the rear window defroster button illuminates when the defroster is ON.

If there is heavy accumulation of snow on the rear window, brush it off before operating the rear defroster.

The rear window defroster automatically turns off after approximately 20 minutes or when the ignition switch is turned off. To turn off the defroster, press the rear window defroster button again.

Outside rearview mirror defroster (if equipped)

If your vehicle is equipped with the outside rearview mirror defrosters, they will operate at the same time you turn on the rear window defroster.

The defroster heats the window to remove frost, fog and thin ice from the rear window, while the engine is running.
Features of your vehicle

**Front wiper deicer (if equipped)**

If your vehicle is equipped with the front wiper deicer, it will be operating at the same time you operate the front windshield defroster.
MANUAL CLIMATE CONTROL SYSTEM (IF EQUIPPED)

1. MAX A/C (Max air conditioning) button
2. A/C (Air conditioning) button
3. Mode selection buttons
4. Fan speed control knob
5. Rear window defroster button
6. Front windshield defrost button
7. Temperature control switch
8. Air intake control button
**Heating and air conditioning**

1. Start the engine.
2. Set the mode to the desired position.
   To improve the effectiveness of heating and cooling:
   - Heating: 💊
   - Cooling: 💊
3. Set the temperature control to the desired position.
4. Set the air intake control to the outside (fresh) air or recirculated air position.
5. Set the fan speed control to the desired speed.
6. If air conditioning is desired, turn the air conditioning system on.

 ※ Air outlet vents for rear seat (E, F)
- The air flow of the rear outlet vents (F) is controlled by the front climate control system and delivered through the inside air duct of the floor.
- The air flow of the rear outlet vents (E, F) may be weaker than the instrument panel vents for the long air duct.
- Close the rear outlet vents (F) in cold weather. The air flow of the rear outlet vents may not be as warm during heating operation. (Use the rear outlet vents (F) during cooling operation.)
**Mode selection**

The mode selection button controls the direction of the air flow through the ventilation system.

- **Face-Level (B, D, F)**
  - Air flow is directed toward the upper body and face. Additionally, each outlet can be controlled to direct the air discharged from the outlet.

- **Bi-Level (B, D, E, C, F)**
  - Air flow is directed towards the face and the floor.

- **Floor/Defrost-Level (A, C, D, E)**
  - Most of the air flow is directed to the floor and the windshield with a small amount directed to the side window defrosters, and side vents.

- **Defrost-Level (A, D)**
  - Most of the air flow is directed to the windshield with a small amount of air directed to the side vents.

- **Floor-Level (C, A, D, E)**
  - Most of the air flow is directed to the floor, with a small amount of the air being directed to the windshield, side window defrosters, and side vents.
Features of your vehicle

**MAX A/C-Level (B, D)**

To operate the MAX A/C, turn the fan speed control knob to the right to maximum fan speed, then press the MAX A/C button. Air flow is directed toward the upper body and face. In this mode, the air conditioning, the recirculated air position and max cool temperature will be selected automatically.

**Instrument panel vents**

The outlet vents can be opened or closed separately using the thumbwheel. Also, you can adjust the direction of air delivered from these vents using the vent control lever as shown.

**Temperature control**

The temperature control switch allows you to control the temperature of the airflow in the vehicle. To change the temperature:

- Press the ^ (red) switch to increase temperature.
- Press the _ (blue) switch to decrease temperature.

The temperature status will be displayed at the above switch panel as an indicator.
Air intake control

This is used to select outside (fresh) air position or recirculated air position.
To change the air intake control position, push the control button.

Recirculated air position
The indicator light on the button illuminates when the recirculated air position is selected.
With the recirculated air position selected, air from the passenger compartment will be drawn through the heating system and heated or cooled according to the function selected.

Outside (fresh) air position
With the outside (fresh) air position selected, air enters the vehicle from outside and is heated or cooled according to the function selected.

* NOTICE
Prolonged operation of the heater in the recirculated air position (without air conditioning selected) may cause fogging of the windshield and side windows and the air within the passenger compartment may become stale.
In addition, prolonged operation of the air conditioning with the recirculated air position selected will result in excessively dry air in the passenger compartment.
Features of your vehicle

**WARNING**
- Continued use of the climate control system operation in the recirculated air position without A/C selected may allow humidity to increase inside the vehicle which may fog the glass and obscure visibility.
- Do not sleep in a vehicle with the air conditioning or heating system on. This may cause serious harm or death due to a drop in the oxygen level and/or body temperature.
- Continued use of the climate control system operation in the recirculated air position may cause drowsiness or sleepiness and loss of vehicle control. Set the air intake control to the outside (fresh) air position as much as possible while driving.

**Fan speed control**

The ignition switch must be in the ON position for fan operation.
The fan speed control knob allows you to control the fan speed of the air flowing from the ventilation system.
To change the fan speed, turn the knob to the right for higher speed or left for lower speed.
Setting the fan speed control knob to the “0″ position turns off the fan.

**To turn off the blowers**

To turn off the blowers, turn the fan speed control knob to the “0″ position.
**Features of your vehicle**

**Air conditioning**

Press the A/C button to turn the air conditioning system on (indicator light will illuminate). Press the button again to turn the air conditioning system off.

**System operation**

**Ventilation**
1. Set the mode to the 🌞 position.
2. Set the air intake control to the outside (fresh) air position.
3. Set the temperature control to the desired position.
4. Set the fan speed control to the desired speed.

**Heating**
1. Set the mode to the 🌞 position.
2. Set the air intake control to the outside (fresh) air position.
3. Set the temperature control to the desired position.
4. Set the fan speed control to the desired speed.
5. If dehumidified heating is desired, turn the air conditioning system (if equipped) on.

- If the windshield fogs up, set the mode to the 🌞 or 🌬️ position.

**Operation Tips**
- To prevent dust or unpleasant fumes from entering the vehicle through the ventilation system, temporarily set the air intake control to the recirculated air position. Be sure to return the control to the fresh air position when the irritation has passed to keep fresh air in the vehicle. This will help keep the driver alert and comfortable.
- Air for the heating/cooling system is drawn in through the grilles just ahead of the windshield. Care should be taken that these are not blocked by leaves, snow, ice or other obstructions.
- To prevent interior fog on the windshield, set the air intake control to the fresh air position and fan speed to the desired position, turn on the air conditioning system, and adjust the temperature control to desired temperature.

ODM042284
Air conditioning

HYUNDAI Air Conditioning Systems are filled with environmentally friendly R-134a refrigerant.

1. Start the engine. Push the air conditioning button.
2. Set the mode to the position.
3. Set the air intake control to the recirculated air position. However, prolonged operation of the recirculated air position will excessively dry the air. In this case, change the air position.
4. Adjust the fan speed control and temperature control to maintain maximum comfort.

- When maximum cooling is desired, set the temperature control to the extreme left position then set the fan speed control to the highest speed.

* NOTICE

- While using the air conditioning system, monitor the engine temperature gauge closely while driving up hills or in heavy traffic when outside temperatures are high. Air conditioning system operation may cause engine overheating. Continue to use the blower fan but turn the air conditioning system off if the engine temperature gauge indicates engine overheating.
- Opening the windows in humid weather air conditioning operates may create water droplets inside the vehicle. Since excessive water droplets may cause damage to electrical equipment, air conditioning should only be used with the windows closed.

Air conditioning system operation tips

- If the vehicle has been parked in direct sunlight during hot weather, open the windows for a short time to let the hot air inside the vehicle escape.
- To help reduce moisture inside of the windows on rainy or humid days, decrease the humidity inside the vehicle by operating the air conditioning system.
- During air conditioning system operation, you may occasionally notice a slight change in engine speed as the air conditioning compressor cycles. This is a normal system operation characteristic.
- During the winter months, use the air conditioning system every month for a few minutes to ensure maximum system performance.
- When using the air conditioning system, you may notice clear water dripping (or even puddling) on the ground under the passenger side of the vehicle. This condensation is a normal system operation characteristic.
• Operating the air conditioning system in the recirculated air position provides maximum cooling, however, continual operation in this mode may cause the air inside the vehicle to become stale.

• During cooling operation, you may occasionally notice a misty air flow because of rapid cooling and humid air intake. This is a normal system operation characteristic.

• If you operate air conditioner excessively, the difference between the temperature of the outside air and that of the windshield could cause the outer surface of the windshield to fog up, causing loss of visibility. In this case, set the mode selection knob or button to the position and fan speed control to the lower speed.

**Climate control air filter**

The climate control air filter installed behind the glove box filters the dust or other pollutants that come into the vehicle from the outside through the heating and air conditioning system. If dust or other pollutants accumulate in the filter over a period of time, the air flow from the air vents may decrease, resulting in moisture accumulation on the inside of the windshield even when the outside (fresh) air position is selected. If this happens, have the climate control air filter replaced by an authorized HYUNDAI dealer.

**NOTICE**

• Replace the filter according to the Maintenance Schedule. If the vehicle is being driven in severe conditions such as dusty, rough roads, more frequent climate control air filter inspections and changes are required.

• When the air flow rate suddenly decreases, the system should be checked at an authorized HYUNDAI dealer.
Checking the amount of air conditioner refrigerant and compressor lubricant

When the amount of refrigerant is low, the performance of the air conditioning is reduced. Overfilling also has a negative influence on the air conditioning system. Therefore, if abnormal operation is found, have the system inspected by an authorized HYUNDAI dealer.

NOTICE

It is important that the correct type and amount of oil and refrigerant is used. Otherwise, damage to the compressor and abnormal system operation may occur.

WARNING

Because the refrigerant is at very high pressure, the air conditioning system should only be serviced by trained and certified technicians. It is important that the correct type and amount of oil and refrigerant is used, otherwise damage to the vehicle and personal injury may occur.

Air Conditioning refrigerant label

The actual Air Conditioning refrigerant label in the vehicle may differ from the illustration.

Each symbols and specification on air conditioning refrigerant label means as below;

1. Classification of refrigerant
2. Amount of refrigerant
3. Classification of Compressor lubricant

Refer to chapter 8 for more detail location of air conditioning refrigerant label.

WARNING

For more detailed information, we recommend that you contact an authorized HYUNDAI dealer. Improper service may cause serious injury to the person performing the service.
AUTOMATIC CLIMATE CONTROL SYSTEM (IF EQUIPPED)

Type A

1. A/C display
2. AUTO (automatic control) button
3. Blower OFF button
4. Air conditioning button
5. Driver's temperature control button
6. Front fan speed control knob
7. Air intake control button
8. Passenger's temperature control button
9. Mode selection button
10. SYNC button
11. Front windshield defroster button
12. Rear window defroster button
13. Climate control information screen selection button*

Type B

1. A/C display
2. AUTO (automatic control) button
3. Blower OFF button
4. Air conditioning button
5. Driver's temperature control button
6. Front fan speed control knob
7. Air intake control button
8. Passenger's temperature control button
9. Mode selection button
10. SYNC button
11. Front windshield defroster button
12. Rear window defroster button
13. Climate control information screen selection button*

* if equipped
Automatic heating and air conditioning

1. Press the AUTO button. The modes, fan speeds, air intake and air-conditioning will be controlled automatically according to the temperature setting.

2. Set the driver's temperature control switch to set the desired temperature.

**NOTICE**

- To turn the automatic operation off, select any button or knob of the following:
  - Mode selection button
  - Front windshield defrost button (Press the button one more time to deselect the front windshield defroster function. The 'AUTO' sign will illuminate on the information display once again.)
  - Fan speed control knob
The selected function will be controlled manually while other functions operate automatically.

- For your convenience and to improve the effectiveness of the climate control, use the AUTO button and set the temperature to 73°F (23°C).
Manual heating and air conditioning

The heating and cooling system can be controlled manually by pressing buttons or turning knob(s) other than the AUTO button. In this case, the system works sequentially according to the order of buttons or knob(s) selected.

1. Start the engine.
2. Set the mode to the desired position.
   For improving the effectiveness of heating and cooling;
   - Heating: 🌡️
   - Cooling: 🌡️
3. Set the temperature control to the desired position.
4. Set the air intake control to the outside (fresh) air position.
5. Set the fan speed control to the desired speed.
6. If air conditioning is desired, turn the air conditioning system on.
Press the AUTO button in order to convert to full automatic control of the system.

Mode selection

The mode selection button controls the direction of the air flow through the ventilation system. The air flow outlet port is converted as follows:

Refer to the illustration in the “Manual climate control system”.

NOTICE

Never place anything over the sensor located on the instrument panel to ensure better control of the heating and cooling system.
Features of your vehicle

Face-Level
Air flow is directed toward the upper body and face. Additionally, each outlet can be controlled to direct the air discharged from the outlet.

Bi-Level
Air flow is directed towards the face and the floor.

Floor-Level
Most of the air flow is directed to the floor, with a small amount of the air being directed to the windshield and side window defrosters.

Floor & Defrost
Most of the air flow is directed to the floor and the windshield with a small amount directed to the side window defrosters.

Defrost-Level
Most of the air flow is directed to the windshield with a small amount of air directed to the side window defrosters.

Instrument panel vents
The outlet vents can be opened or closed separately using the thumb-wheel. Also, you can adjust the direction of air delivered from these vents using the vent control lever as shown.
**Temperature control**

The temperature will increase by pushing the up button. Each push of the button will cause the temperature to increase by 1°F/0.5°C.

The temperature will decrease by pushing the down button. Each push of the button will cause the temperature to decrease by 1°F/0.5°C. When set to the lowest temperature setting, the air conditioning will operate continuously.

**Adjusting the driver and passenger side temperature equally**

- Press the "SYNC" button to adjust the driver and passenger side temperature equally.

The passenger side temperature will be set to the same temperature as the driver side temperature.

- Press the driver side temperature control button. The driver and passenger side temperature will be adjusted equally.

**Adjusting the driver and passenger side temperature individually**

- Press the "SYNC" button again to adjust the driver and passenger side temperature individually. The illumination of button turns off.

- Press the driver side temperature control button to adjust the driver side temperature.

- Press the passenger side temperature control button to adjust the passenger side temperature.
Temperature conversion
If the battery has been discharged or disconnected, the temperature mode display will reset to Fahrenheit.
To change the temperature unit from °F to °C or °C to °F:
- On the instrument cluster, go to User Settings Mode → Other Features → Temperature Unit.
- Press the AUTO button for 3 seconds while pressing the OFF button. (Automatic climate control system)
Both the temperature unit on the cluster LCD display and climate control screen will change.

Air intake control
This is used to select the outside (fresh) air position or recirculated air position.
To change the air intake control position, push the control button.

Recirculated air position
The indicator light on the button illuminates when the recirculated air position is selected.
With the recirculated air position selected, air from the passenger compartment will be drawn through the heating system and heated or cooled according to the function selected.

Outside (fresh) air position
With the outside (fresh) air position selected, air enters the vehicle from outside and is heated or cooled according to the function selected.
**NOTICE**

Prolonged operation of the heater in the recirculated air position (without air conditioning selected) may cause fogging of the windshield and side windows and the air within the passenger compartment may become stale. In addition, prolonged use of the air conditioning with the recirculated air position selected will result in excessively dry air in the passenger compartment.

**WARNING**

- Continued use of the climate control system operation in the recirculated air position may allow humidity to increase inside the vehicle which may fog the glass and obscure visibility.
- Do not sleep in a vehicle with the air conditioning or heating system on. This may cause serious harm or death due to a drop in the oxygen level and/or body temperature.
- Continued use of the climate control system operation in the recirculated air position may cause drowsiness or sleepiness and loss of vehicle control. Set the air intake control to the outside (fresh) air position as much as possible while driving.

**Fan speed control**

The fan speed can be set to the desired speed by turning the fan speed control knob. The higher the fan speed is, the more air is delivered. To turn off the fan speed, press the OFF button.
**Features of your vehicle**

**Air conditioning**

- Type A
- Type B

Push the A/C button to turn the air conditioning system on (indicator light will illuminate).

Push the button again to turn the air conditioning system off.

**OFF mode**

Push the OFF button to turn off the air climate control system. However, you can still operate the mode and air intake buttons as long as the ignition switch is in the ON position.

**Climate information screen selection (if equipped)**

Press the climate information screen selection button to display climate information on the screen.
FEATURES OF YOUR VEHICLE

For maximum defrosting, set the temperature control to the extreme right/hot position and the fan speed control to the highest speed.

If warm air to the floor is desired while defrosting or defogging, set the mode to the floor-defrost position.

Before driving, clear all snow and ice from the windshield, rear window, outside rear view mirrors, and all side windows.

Clear all snow and ice from the hood and air inlet in the cowl grill to improve heater and defroster efficiency and to reduce the probability of fogging up the inside of the windshield.

NOTICE

Be sure to keep the interior surface of the windshield clean by wiping it with a clean cloth and glass cleaner. This will help reduce the tendency of the glass fogging and also improve visibility.

WARNING - Windshield heating

Do not use the  or  position during cooling operation in extremely humid weather. The difference between the temperature of the outside air and that of the windshield could cause the outer surface of the windshield to fog up, causing loss of visibility. In this case, set the mode selection knob or button to the  position and fan speed control knob or button to a lower speed.

Manual climate control system

To defog inside windshield

1. Select desired temperature.
2. Select any fan speed except “0” position.
3. Select the  or  position.
4. The outside (fresh) air will be selected automatically.

If the outside (fresh) air position is not selected automatically, press the corresponding button manually.
Features of your vehicle

To defrost outside windshield

1. Set the temperature to the extreme hot position.
2. Set the fan speed to the highest (extreme right) position.
3. Select the position.
4. The outside (fresh) air will be selected automatically.

Automatic climate control system

To defog inside windshield

1. Select desired temperature.
2. Select desired fan speed.
3. Press the defrost button ( ).
4. The outside (fresh) air position will be selected automatically.
If the outside (fresh) air position is not selected automatically, adjust the corresponding button manually.
If the position is selected, lower fan speed is adjusted to a higher fan speed.

To defrost outside windshield

1. Set the temperature to the extreme hot (HI) position.
2. Set the fan speed to the highest (extreme right) position.
3. Press the defrost button ( ).
4. The outside (fresh) air position will be selected automatically.
If the position is selected, lower fan speed is adjusted to a higher fan speed.
**Auto defogging system (if equipped)**

This indicator illuminates when the auto defogging system senses the moisture of inside the windshield and operates.

If more moisture is in the vehicle, the automated steps operate as follows:

- **Step 1**: Outside air position
- **Step 2**: Blowing air toward the windshield
- **Step 3**: Increasing air flow toward the windshield
- **Step 4**: Operating the air conditioning
- **Step 5**: Maximizing the air conditioning

Auto defogging reduces the probability of fogging up the inside of the windshield by automatically sensing the moisture inside the windshield. The auto defogging system operates when the heater or air conditioning is on.

The auto defogging system is automatically activated when the conditions are met. However, if you would like to cancel the auto defogging system, press the front defroster button 4 times within 2 seconds while pressing the AUTO button. The indicator of the front defroster button will blink 3 times to notify you that the system is cancelled. To use the auto defogging system again, follow the procedures mentioned above.

If the battery has been disconnected or discharged, it resets to the auto defogging status.
Features of your vehicle

* NOTICE

• When the air conditioning is turned on by Auto defogging system, if you try to turn off the air conditioning, the indicator will blink 3 times and the air conditioning will not be turned off.
• For efficiency, do not select recirculated air position while Auto defogging system is operating.

⚠️ CAUTION

Do not remove the sensor cover located on the upper end of the driver side windshield glass. Damage to system parts could occur and may not be covered by your vehicle warranty.
STORAGE COMPARTMENTS

CAUTION

- To avoid possible theft, do not leave valuables in the storage compartments.
- Always keep the storage compartment covers closed while driving. Do not attempt to place so many items in the storage compartment that the storage compartment cover cannot close securely.

WARNING - Flammable materials
Do not store cigarette lighters, propane cylinders, or other flammable/explosive materials in the vehicle. These items may catch fire and/or explode if the vehicle is exposed to hot temperatures for extended periods.

Center console storage
To open the center console storage, pull up the lever.

Glove box
The glove box can be locked and unlocked with the mechanical key (1). To open the glove box, push the button (2) and the glove box will automatically open (3). Close the glove box after use.
Features of your vehicle

**WARNING**
To reduce the risk of injury in an accident or sudden stop, always keep the glove box door closed while driving.

**CAUTION**
Do not keep food in the glove box for a long time.

### Multi box (if equipped)
To open the cover, push the lever (1) and the multi box will open automatically. It can be used for storing small items.

**CAUTION**
Do not drive with the multi box open.

### Sunglass holder
To open the sunglass holder, press the cover and the holder will slowly open. Place your sunglasses in the compartment door with the lenses facing out. Push to close.
**WARNING**

- Do not keep objects except sunglasses inside the sunglass holder. Such objects can be thrown from the holder in the event of a sudden stop or an accident, possibly injuring the passengers in the vehicle.
- Do not open the sunglass holder while the vehicle is moving. The rear view mirror of the vehicle can be blocked by an open sunglass holder.
- Do not put the glasses forcibly into a sunglass holder to prevent breakage or deformation of glasses. It may cause personal injury if you try to open it forcibly when the glasses are jammed in holder.

**Luggage tray**

**Rear**
- Grasp the handle on the top of the cover and lift it.

**Front**

1. Grasp the handle on the top of the cover and lift it.
2. Push the cover toward the front of the vehicle and fold it.

You can place a first aid kit, a reflector triangle, tools, etc. in the box for easy access.
INTERIOR FEATURES

Cup holder

Cups or small beverage cans may be placed in the cup holders.
To use the center cup holder, pull down the armrest and press the open button.

⚠️ WARNING - Hot liquids
• Do not place uncovered cups of hot liquid in the cup holder while the vehicle is in motion. If the hot liquid spills, you may burn yourself. Such a burn to the driver could lead to loss of control of the vehicle.
• To reduce the risk of personal injury in the event of sudden stop or collision, do not place uncovered or unsecured bottles, glasses, cans, etc., in the cup holder while the vehicle is in motion.

⚠️ CAUTION
When cleaning spilled liquids, do not dry the cup holder at high temperatures. This may damage the chrome part of the cup holder.

⚠️ WARNING
Keep cans or bottles out of direct sun light and do not put/leave them in a hot vehicle. The container/contents may explode.
**Sunvisor**

- To use the vanity mirror, pull down the visor and slide the mirror cover (3).
- Adjust the sunvisor extension (if equipped) forward or backward (4).

**CAUTION**

- Always have the switch in the off position when the vanity mirror lamp is not in use. If the sunvisor is closed without the lamp off, it may discharge the battery or damage the sunvisor.
- Always use the sunvisor extension, after swinging the sunvisor to the side.

**Power outlet**

- Use the sunvisor to shield direct light through the front or side windows.
- To use a sunvisor, pull it downward.
- To use a sunvisor for a side window, pull it downward, unsnap it from the bracket (1) and swing it to the side (2).
The power outlet is designed to provide power for mobile telephones or other devices designed to operate with vehicle electrical systems. The devices should draw less than 10 amps with the engine running.

⚠️ CAUTION
- Use the power outlet only when the engine is running and remove the accessory plug after use. Using the accessory plug for prolonged periods of time with the engine off could cause the battery to discharge.
- Only use 12V electric accessories which are less than 10A in electric capacity.
- Adjust the air-conditioner or heater to the lowest operating level when using the power outlet.
- Close the cover when not in use.
- Some electronic devices can cause electronic interference when plugged into a vehicle’s power outlet. These devices may cause excessive audio static and malfunctions in other electronic systems or devices used in your vehicle.

⚠️ WARNING
Do not put fingers or foreign elements (pin, etc.) into a power outlet and do not touch with a wet hand. You may get an electric shock.
Clothes hanger

To use the hanger, pull down the upper portion of hanger.

⚠️ CAUTION
Do not hang heavy clothes, because it may damage the hook.

Floor mat anchor(s)

When using a floor mat on the front floor carpet, make sure it attaches to the floor mat anchor(s) in your vehicle. This keeps the floor mat from sliding forward.

⚠️ WARNING
The floor mat must be properly anchored so that it will not interfere with the operation of the accelerator pedal. Any interference with the accelerator pedal could cause the accelerator pedal to be unable to return to the idle position. A pedal that cannot return to the idle position could lead to an accident which may result in severe personal injury or death.
**WARNING**

The following must be observed when installing ANY floor mat to the vehicle, so that it will not interfere with the pedal.

- Ensure that the floor mats are securely attached to the vehicle’s floor mat anchor(s) before driving the vehicle.
- Do not use ANY floor mat that cannot be firmly attached to the vehicle’s floor mat anchors.
- Do not stack floor mats on top of one another (e.g. all-weather rubber mat on top of a carpeted floor mat). Only a single floor mat should be installed in each position.

**IMPORTANT** - Your vehicle was manufactured with driver’s side floor mat anchors that are designed to securely hold the floor mat in place. To avoid any interference with pedal operation, HYUNDAI recommends that only the HYUNDAI floor mat designed for use in your vehicle be installed.

---

**Aux, USB and iPod® port**

You can use the AUX port to connect audio devices and the USB port to plug in a USB device or iPod®.

**NOTICE**

When using a portable audio device connected to the power outlet, noise may occur during playback. If this happens, use the power source of the portable audio device.

* iPod® is a trademark of Apple Inc.

---

**Luggage net (holder) (if equipped)**

To keep items from shifting in the cargo area, you can use the four holders located in the cargo area to attach the luggage net. If necessary, contact your authorized HYUNDAI dealer to obtain a luggage net.
* NOTICE
Vehicles equipped with a luggage rail system may use the shackles to hook the luggage net.

CAUTION
To prevent damage to the goods or the vehicle, care should be taken when carrying fragile or bulky objects in the luggage compartment.

WARNING
To avoid eye injury, DO NOT overstretch the luggage net. ALWAYS keep your face and body out of the luggage net's recoil path. DO NOT use the luggage net when the strap has visible signs of wear or damage.

Cargo security screen (if equipped)
Use the cargo security screen to hide items stored in the cargo area.

To use the cargo security screen
1. Pull the cargo security screen towards the rear of the vehicle by the handle (1).
2. Insert the guide pin into the guide (2).

* NOTICE
Pull out the cargo security screen with the handle in the center to prevent the guide pin from falling out of the guide.
When the cargo security screen is not in use:
1. Pull the cargo security screen backward and up to release it from the guides.
2. The cargo security screen will automatically slide back in.

*NOTICE*
The cargo security screen may not automatically slide back in if the cargo security screen is not fully pulled out. Fully pull it out and then let go.

---

**To remove the cargo security screen**
1. Push in the guide pin.
2. While pushing the lever, pull out the cargo security screen.
3. Open the luggage tray and keep the cargo security screen in the tray.

**To remove the cargo security screen from the luggage tray**
1. Pull up the screen board.
2. Push in the guide pin.
3. While pushing the guide pin, pull out the cargo security screen.
**WARNING**

- Do not place objects on the cargo security screen. Such objects may be thrown about inside the vehicle and possibly injure vehicle occupants during an accident or when braking.
- Never allow anyone to ride in the luggage compartment. It is designed for luggage only.
- Maintain the balance of the vehicle and locate the weight as forward as possible.

---

**CAUTION**

*Since the cargo security screen may be damaged or malformed, do not put luggage on it when it is used.*

---

**Side curtain (if equipped)**

To use the side curtain:
1. Lift the curtain by the hook (1).
2. Hang the curtain on both sides of the hook.
Features of your vehicle

EXTERIOR FEATURES

Roof rack (if equipped)

If the vehicle has a roof rack, you can load cargo on top of your vehicle.

✽ NOTICE
If the vehicle is equipped with a sunroof, be sure not to position cargo onto the roof rack in such a way that it could interfere with sunroof operation.

⚠️ CAUTION
- When carrying cargo on the roof rack, take the necessary precautions to make sure the cargo does not damage the roof of the vehicle.
- When carrying large objects on the roof rack, make sure they do not exceed the overall roof length or width.
WARNING
• The following specification is the maximum weight that can be loaded onto the roof rack. Distribute the load as evenly as possible onto the roof rack and secure the load firmly.

| ROOF RACK | 100 kg (220 lbs.) EVENLY DISTRIBUTED |

Loading cargo or luggage in excess of the specified weight limit on the roof rack may damage your vehicle.
• The vehicle center of gravity will be higher when items are loaded onto the roof rack. Avoid sudden starts, braking, sharp turns, abrupt maneuvers or high speeds that may result in loss of vehicle control or rollover resulting in an accident.

(Continued)

(Continued)
• Always drive slowly and turn corners carefully when carrying items on the roof rack. Severe wind updrafts, caused by passing vehicles or natural causes, can cause sudden upward pressure on items loaded on the roof rack. This is especially true when carrying large, flat items such as wood panels or mattresses. This could cause the items to fall off the roof rack and cause damage to your vehicle or others around you.
• To prevent damage or loss of cargo while driving, check frequently before or while driving to make sure the items on the roof rack are securely fastened.
Features of your vehicle

**AUDIO SYSTEM**

*NOTICE*
- If you install an aftermarket HID headlamp, your vehicle's audio and electronic device may malfunction.
- Prevent caustic solutions such as perfume and cosmetic oil from contacting the dashboard because they may cause damage or discoloration.

### Antenna

*Roof antenna*

Your vehicle uses a roof antenna to receive both AM and FM broadcast signals.

### Steering wheel audio control

The steering wheel incorporates audio control buttons on the left hand side of the steering wheel.

⚠️ **CAUTION**

*Do not operate audio remote control buttons simultaneously.*
**MODE (1)**
Press the button to change audio source.

**SEEK/PRESET (↑/↓) (2)**
The SEEK/PRESET button has different functions based on the system mode.
For the following functions the button should be pressed for 0.8 second or more.

**RADIO mode**
It will function as the AUTO SEEK select button.

**CD/USB/iPod® mode**
It will function as the FF/REW button.

If the SEEK/PRESET button is pressed for less than 0.8 second, it will work as follows in each mode.

**RADIO mode**
It will function as the PRESET STATION buttons.

**CD/USB/iPod® mode**
It will function as TRACK UP/DOWN button.

**VOLUME (VOL +/-) (3)**
- Push the lever upward (+) to increase the volume.
- Push the lever downward (-) to decrease the volume.

**MUTE (4)**
- Press the button to mute the sound.
- Press the button to turn off the microphone during a telephone call.

Detailed information for audio control buttons are described in the following pages in this section.
How vehicle audio works

FM reception

AM and FM radio signals are broadcasted from transmitter towers located around your city. They are intercepted by the radio antenna on your vehicle. This signal is then processed by the radio and sent to your vehicle speakers.

When a strong radio signal has reached your vehicle, the precise engineering of your audio system ensures the best possible quality reproduction. However, in some cases the signal coming to your vehicle may not be strong and clear.

This can be due to factors, such as the distance from the radio station, closeness of other strong radio stations or the presence of buildings, bridges or other large obstructions in the area.

AM reception

AM broadcasts can be received at greater distances than FM broadcasts. This is because AM radio waves are transmitted at low frequencies. These long distance, low frequency radio waves can follow the curvature of the earth rather than travelling straight. In addition, they curve around obstructions resulting in better signal coverage.
FM broadcasts are transmitted at high frequencies and do not bend to follow the earth's surface. Because of this, FM broadcasts generally begin to fade within short distances from the station. Also, FM signals are easily affected by buildings, mountains, and obstructions. This can lead to undesirable or unpleasant listening conditions which might lead you to believe a problem exists with your radio. The following conditions are normal and do not indicate radio trouble:

- **Fading** - As your vehicle moves away from the radio station, the signal will weaken and sound will begin to fade. When this occurs, we suggest that you select another stronger station.
- **Flutter/Static** - Weak FM signals or large obstructions between the transmitter and your radio can disturb the signal causing static or fluttering noises to occur. Reducing the treble level may lessen this effect until the disturbance clears.
- **Station Swapping** - As an FM signal weakens, another more powerful signal near the same frequency may begin to play. This is because your radio is designed to lock onto the clearest signal. If this occurs, select another station with a stronger signal.
- **Multi-Path Cancellation** - Radio signals being received from several directions can cause distortion or fluttering. This can be caused by a direct and reflected signal from the same station, or by signals from two stations with close frequencies. If this occurs, select another station until the condition has passed.
**Using a cellular phone or a two-way radio**

When a cellular phone is used inside the vehicle, noise may be produced from the audio system. This does not mean that something is wrong with the audio equipment. In such a case, try to operate mobile devices as far from the audio equipment as possible.

**WARNING**

Do not use a cellular phone while driving. Stop at a safe location to use a cellular phone.

**CAUTION**

When using a communication system such as a cellular phone or a radio set inside the vehicle, a separate external antenna must be fitted. When a cellular phone or a radio set is used with an internal antenna alone, it may interfere with the vehicle's electrical system and adversely affect safe operation of the vehicle.
Features of your vehicle

AUDIO (With Touch Screen)

- Type B
Features of Your Audio

(1) EJECT
• Ejects the disc.

(2) RADIO
• Changes to FM/AM/SiriusXM mode.
• Each time the button is pressed, the mode is changed in the order of FM1 ➔ FM2 ➔ AM ➔ XM1 ➔ XM2 ➔ XM3.

(3) MEDIA
• Changes to CD/USB/iPod®/AUX /My Music/iPod® Audio mode.
• Each time the button is pressed, the mode is changed in the order of CD ➔ USB(iPod®) ➔ AUX ➔ My Music ➔ BT(Bluetooth®) Audio.

(4) PHONE
• Changes to Phone mode.
• When a phone is not connected, the connection screen is displayed.

(5) POWER/VOL knob
• Power: Press to turn power on/off.
• Volume: Turn left/right to control volume.

(6) SEEK TRACK
• When pressed briefly
  - Radio mode: Plays previous/next frequency.
  - Media (CD/USB/iPod®/My Music) modes: Changes the track, Song(file).
• When pressed and held
  - Radio mode: Continuously changes the frequency. Upon release, plays the current frequency.
  - Media(CD/USB/iPod®/My Music) modes: Rewinds or fast forwards the track or file.
  - During a Handsfree call, controls the call volume.
(7) **DISP**  
• Turns the monitor display on/off.

(8) **CLOCK**  
• Displays the time/date/day.

(9) **SCAN**  
• Radio mode: Previews all receivable broadcasts for 5 seconds each.  
• Media (CD/USB/My Music) modes: Previews each song (file) for 10 seconds each.

(10) **SETUP**  
• Changes to Setup mode.

(11) **TUNE** knob  
• Radio mode: Turn to change broadcast frequencies.  
• Media (CD/USB/iPod®/My Music) modes: Turn to search tracks/channels/files.

(12) **CAT/FOLDER**  
• SiriusXM Radio: Category Search.  
• MP3 CD/USB mode: Search Folder.

(13) **DISC-IN LED**  
• LED that indicates whether a disc is inserted.
NOTICE - Using Compact Discs

• This device has been manufactured to be compatible with software bearing the following logo marks.
• Do not clean discs with chemical solutions, such as record sprays, antistatic sprays, antistatic liquids, benzene, or thinners.
• After using a disc, put the disc back in its original case to prevent disc scratches.
• Hold discs by their edges or within the center hole to prevent damage to disc surfaces.
• Do not introduce foreign substances into the disc insert/eject slot. Introducing foreign substances could damage the device interior.
• Do not insert two discs simultaneously.
• When using CD-R/CD-RW discs, differences in disc reading and playing times may occur depending on the disc manufacturer, production method and the recording method used.

(Continued)

(Continued)

• Clean fingerprints and dust off the disc surface (coated side) with a soft cloth.
• The use of CD-R/CD-RW discs attached with labels may result in disc slot jams or difficulties in disc removal. Such discs may also result in noise while playing.
• Some CD-R/CD-RW discs may not properly operate depending on the disc manufacturer, production method and the recording method used. If problems persist, try using a different CD as continued use may result in malfunctions.
• The performance of this product may differ depending on the CD-RW Drive Software.
• Copy-protected CDs such as S-type CDs may not function in the device. DATA discs cannot be played. (However, such discs may still operate but will do so abnormally.)

(Continued)

(Continued)

• Do not use abnormally shaped discs (8cm, heart-shaped, octagon-shaped) as such discs could lead to malfunctions.
• If the disc is straddled on the disc slot without removal for 10 seconds, the disc will automatically be re-inserted into the disc player.
• Only genuine audio CDs are supported. Other discs may result in recognition failure. (e.g. copy CD-R, CDs with labels)
NOTICE - Using the USB Devices

- Connect the USB device after turning on the engine. The USB device may become damaged if it is already connected when the ignition is turned on. The USB device may not operate properly if the car ignition is turned on or off with the USB device connected.
- Be careful for static electricity when connecting/disconnecting USB devices.
- Encoded MP3 Players will not be recognized when connected as an external device.
- When connecting an external USB device, the vehicle's audio system may not recognize the USB depending on what firmware is used by USB device or what files are on the USB.
- Only products formatted with byte/sectors under 64Kbyte will be recognized.
- This device recognizes USB devices formatted in FAT 12/16/32 file formats. This device does not recognize files in NTFS file format.

(Continued)

- Some USB devices may not be supported due to compatibility issues.
- Avoid contact between the USB connector and bodily parts or foreign objects.
- Repeated connecting/disconnecting of USB devices within short periods of time may result in product malfunction.
- A strange noise may occur when disconnecting the USB.
- Make sure to connect/disconnect external USB devices with the audio power turned off.
- The amount of time required to recognize the USB device may differ depending on the type, size or file formats stored on the USB. Such differences in time are not indications of malfunctions.
- The vehicle audio system only supports USB devices designed to play music files.
- USB images and videos are not supported.

(Continued)

- Do not use the USB I/F to charge batteries or USB accessories that generate heat. Doing so may lead to worsened performance or damage to the audio system.
- The audio system may not recognize the USB device if separately purchased USB hubs and extension cables are being used. Connect the USB device directly with the USB port of the vehicle.
- When using mass storage USB devices with separate logical drives, only files saved to the root drive can be played.
- Files may not properly operate if application programs are installed on the USBs.
- The audio system may not operate normally if MP3 Players, cellular phones, digital cameras, or other electronic devices (USB devices not recognized as portable disk drives) are connected with the audio system.

(Continued)
(Continued)
• Charging through the USB may not work for some mobile devices.
• The device may not support normal operation when using a typical USB memory device (miniature, keychain, etc.). For best results, use a typical USB device that has a metal case.
• The device may not support normal operation when using formats such as HDD Type, CF, or SD Memory.
• The device will not support files locked by DRM (Digital Rights Management.)
• USB memory sticks used by connecting an Adaptor (SD Type or CF Type) may not be properly recognized.
• The device may not operate properly when using USB HDDs or USBs subject to connection failures caused by vehicle vibrations. (e.g. i-stick type)

(Continued)
• Avoid use of USB memory products that can also be used as key chains or mobile phone accessories. Use of such products may cause damage to the USB jack.
• Connecting an MP3 device or phone through various channels, such as AUX/BT or Audio/ USB mode may result in pop noises or abnormal operation.
NOTICE - Using an iPod®

• iPod® is a registered trademark of Apple Inc.
• In order to use the iPod® with your vehicle's audio system, you must use a dedicated iPod® cable. (the cable that is supplied when purchasing iPod®/iPhone® products)
• If the iPod® is connected to the vehicle while it is playing, a high pitch sound could occur for approximately 1-2 seconds immediately after connecting. If possible, connect the iPod® to the vehicle with the iPod® stopped/paused.
• When the vehicle ignition is set to ACC or ON, connecting the iPod® through the iPod® cable will charge the iPod® through the car audio system.
• When connecting with the iPod® cable, make sure to fully insert the jack to prevent communication interference.

(Continued)

(Continued)
• When the EQ features of an external device, such as the iPod®, and the audio system are both active, EQ effects could overlap and cause sound deterioration and distortion. Whenever possible, turn off the EQ feature within the external device when it is connected to the audio system.
• Noise may occur when an iPod® or AUX device is connected. When such devices are not being used, disconnect the device for storage.
• When the iPod® or AUX device power is connected to the power jack, playing the external device may result in noise. In such cases, disconnect the power connection before use.
• Skipping or improper operation may occur depending on the characteristics of your iPod®/iPhone® device.

(Continued)
• If your iPhone® is connected to both the Bluetooth® Wireless Technology and USB, the sound may not be properly played. In your iPhone®, select the Dock connector or Bluetooth® Wireless Technology to change the sound output (source).
• iPod® mode cannot be operated when the iPod® cannot be recognized due to versions that do not support communication protocols.
• For fifth generation iPod® Nano devices, the iPod® may not be recognized when the battery level is low. Please charge the iPod® for use.
• The search/play orders shown within the iPod® device may differ from the orders shown within the audio system.
• If the iPod® malfunctions due to an iPod® device defect, reset the iPod® and try again. (To learn more, refer to your iPod® manual)
• Some iPod® products may not sync with the System depending on the version. If the Media is removed before the Media is recognized, then the system may not properly restore the previously operated mode. (iPad® charging is not supported.)

• Use an iPod® cable shorter than 1 meter in length such as the one originally supplied with a new iPod®, longer cables may lead to the audio system not recognizing the iPod®.

**NOTICE - Using the Bluetooth® Wireless Technology Audio Mode**

- Bluetooth® Wireless Technology Audio Mode can be used only when a Bluetooth® Wireless Technology phone has been connected.
- Bluetooth® Wireless Technology Audio Mode will not be available when connecting mobile phones that do not support this feature.
- If a Bluetooth® Wireless Technology Phone is being used to play music and receives an incoming or outgoing phone call, then the music will stop.
- Moving the Track up/down while playing Bluetooth® Wireless Technology audio mode may result in pop noises with some mobile phones.
- Bluetooth® Wireless Technology streaming audio may not be supported in some mobile phones.

• When returning to Bluetooth® Wireless Technology Audio mode after ending a call, the mode may not automatically restart in some mobile phones.

• Receiving an incoming call or making an outgoing call while playing Bluetooth® Wireless Technology Audio may result in audio interference.
NOTICE - Using the Bluetooth® Wireless Technology Cellular Phone

- Bluetooth® Wireless Technology Handsfree refers to a device which allows the user to conveniently make phone calls with Bluetooth® Wireless Technology mobile phones through the audio system.
- Bluetooth® Wireless Technology allows devices to be connected in a short distance, including hands-free devices, stereo headsets, wireless remote controllers, etc. For more information, visit the Bluetooth® Wireless Technology website at www.Bluetooth.com.
- The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth® SIG, Inc. and any use of such marks by Hyundai is under license. Other trademarks and trade names are those of their respective owners. A Bluetooth® enabled cell phone is required to use Bluetooth® Wireless Technology.

(Continued)

- Bluetooth® Wireless Technology features supported within the vehicle are as follows. Some features may not be supported depending on your Bluetooth® Wireless Technology device.
  - Answering and placing Bluetooth® Wireless Technology Handsfree calls
  - Menu operation during call
    (Switch to Private, Switch to call waiting, Outgoing volume)
  - Download Call History
  - Download Mobile Phone book
  - Phone book/Call History Auto Download
  - Bluetooth® Wireless Technology device auto connection
  - Bluetooth® Wireless Technology Audio

(Continued)

- The phone must be paired to the audio system to use Bluetooth® Wireless Technology related features.
- Pairing and connecting a Bluetooth® Wireless Technology enabled mobile phone will work only when the Bluetooth® Wireless Technology option within your mobile phone has been turned on. (Methods of turning on the Bluetooth® Wireless Technology enabled feature may differ depending on the mobile phone.)
- Do not use a cellular phone or perform Bluetooth® Wireless Technology settings (e.g. pairing a phone) while driving.
- Even if the phone supports Bluetooth® Wireless Technology, the phone will not be found during device searches if the phone has been set to hidden state or the Bluetooth® Wireless Technology has been deactivated. Disable the hidden state or activate the Bluetooth® Wireless Technology prior to searching/connecting with the car audio system.
• You will not be able to use the hands-free feature when your phone (in the car) is outside of the cellular service area. (e.g. in a tunnel, in an underground area, in a mountainous area, etc.)
• If the cellular phone signal is poor or the vehicle’s interior noise is too loud, it may be difficult to hear the other person’s voice during a call.
• Do not place the phone near or inside metallic objects, otherwise communications with Bluetooth® Wireless Technology system or cellular service stations can be disturbed.
• Placing the audio system within an electromagnetic environment may result in noise interference.
• Some cellular phones or other devices may cause interference noise or malfunction to the audio system. In this case, storing the device in a different location may resolve the condition.

(Continued)

(Continued) • While a phone is connected through Bluetooth® Wireless Technology your phone may discharge quicker than usual for additional Bluetooth® Wireless Technology-related operations.
• If Priority is set upon vehicle ignition (IGN/ACC ON), the Bluetooth® Wireless Technology phone will be automatically connected. Even if you are outside, the Bluetooth® Wireless Technology phone will be automatically connected once you are in the vicinity of the vehicle. If you do not want to automatically connect your Bluetooth® Wireless Technology phone, try the following.
  1) Turn the Bluetooth® Wireless Technology function within the mobile phone off/on and try again.
  2) Turn the mobile phone power Off/On and try again.
  3) Completely remove the mobile phone battery, reboot, and then try again.
  4) Reboot the audio system and try again.
  5) Delete all paired devices, pair and try again.
 • It is possible to pair up to five Bluetooth® Wireless Technology devices to the car system.

(Continued)
(Continued)

• Phone contact names should be saved in English or they may not be displayed correctly.
• The Handsfree call volume and quality may differ depending on the mobile phone.
• Only one Bluetooth® Wireless Technology device can be connected at a time.
• In some mobile phones, starting the ignition while talking through Bluetooth® Wireless Technology enabled handsfree call will result in the call becoming disconnected. (Switch the call back to your mobile phone when starting the ignition.)
• If the mobile phone is not paired or connected, it is not possible to enter Phone mode. Once a phone is paired or connected, the guidance screen will be displayed.
• Bluetooth® Handsfree may not be supported in some mobile phones. To learn more about mobile device compatibility, visit http://www.hyundai.com/us/en/content/owners/bluetooth.

★ NOTICE

Bluetooth® Wireless Technology Handsfree is a feature that enables drivers to practice safe driving. Connecting the car audio system with a Bluetooth® Wireless Technology phone allows the user to conveniently make calls, receive calls, and manage the phone book. Before using the Bluetooth® Wireless Technology, carefully read the contents of this user’s manual.

⚠️ WARNING

• Excessive use or operations while driving may lead to negligent driving practices and be the cause of accidents.
• Do not operate the device excessively while driving.
• Viewing the screen for prolonged periods of time while driving is dangerous and may lead to accidents.
NOTICE - Using Voice Recognition

- When using the voice recognition feature, only commands listed within the user’s manual are supported.
- Be aware that during the operation of the voice recognition system, pressing any button other than the \( \phi \) button will terminate voice recognition mode.
- For optimal voice recognition performance, position your head below the microphone above the driver’s seat and maintain proper position when speaking voice commands.
- Within the following situations, voice recognition may not function properly due to external sound.
  - When the windows and sunroof are open
  - When the blower AC/heater is set to high
  - When entering and passing through tunnels
  - When driving on rugged and uneven roads
  - During severe rain (heavy rains, windstorms)

(Continued)

- Phone related voice commands can be used only when a Bluetooth\textsuperscript{®} Wireless Technology device is connected.
- When making calls by stating a name, the corresponding contact must be downloaded and stored within the audio system.
- After downloading the Bluetooth\textsuperscript{®} Wireless Technology phone book, it takes some time to convert the phone book data into voice information. During this time, voice recognition may not properly operate.
- Pronounce the voice commands naturally and clearly as if in a normal conversation.
**Radio Mode**

*Radio Mode Display Controls*

1. **Mode Display**
   Displays current operating mode.

2. **Frequency**
   Displays the current frequency.

3. **Preset**
   Displays current preset number [1] ~ [6].

4. **Preset Display**
   Displays preset buttons.

5. **A.Store**
   Automatically saves frequencies with superior reception to Preset buttons.
Features of your vehicle

**With the Radio Mode Button**

Pressing the [RADIO] button will change the operating mode in the order of FM1 ➟ FM2 ➟ AM ➟ XM1 ➟ XM2 ➟ XM3.

If [Mode Pop up] is turned on within [SETUP] ► [Display], then pressing the [RADIO] button will display the Radio Pop-up Mode screen.

Turn the TUNE knob to move the focus. Press the knob to select.

**Seek**

Press the [SEEK TRACK] button to play the previous/next frequency.

**Tune**

Turn the TUNE knob to select the desired frequency.

**Selecting Presets/Saving Presets**

Press the [Preset] button to display the broadcast information for the frequency saved to each button.

Press the [1] ~ [6] buttons to play the desired preset.

While listening to a frequency you want to save as a preset, press and hold one of the [1] ~ [6] preset buttons to save the current frequency to the selected preset.

**A.Store (Auto Store)**

Press the [A.Store] button to automatically save receivable frequencies to Preset buttons.

**Scan**

Press the [SCAN] button to preview frequencies with superior reception for 5 seconds each.

Press and hold the [SCAN] button to preview presets for 5 seconds each.

Once scan is complete, the previous frequency will be restored.

While Scan is operating, pressing the [SCAN] button will cancel scanning.
**SiriusXM® Satellite Radio information**

**Satellite Radio channels:**
Enjoy SiriusXM Satellite Radio with a 3-month trial subscription to the SiriusXM Select package. You’ll get over 140 channels, including commercial-free music, plus all your favorite sports, exclusive talk, entertainment, and a selection of premium programming. For more information and a complete list of SiriusXM channels, visit siriusxm.com in the United States, siriusxm.ca in Canada, or call SiriusXM at 1-888-539-7474.

**Satellite Radio reception factors:**
To receive the satellite signal, your vehicle has been equipped with a satellite radio antenna located on the roof of your vehicle. The vehicle roof provides the best location for an unobstructed, open view of the sky, a requirement of a satellite radio system. Like AM/FM, there are several factors that can affect satellite radio reception performance:

- **Antenna obstructions:** For optimal reception performance, keep the antenna clear of snow and ice buildup and keep luggage and other material as far away from the antenna as possible.
- **Terrain:** Hills, mountains, tall buildings, bridges, tunnels, freeway overpasses, parking garages, dense tree foliage and thunderstorms can interfere with your reception.

**SiriusXM Satellite Radio service:**
SiriusXM is a subscription-based satellite radio service that broadcasts music, sports, news and entertainment programming to radio receivers, which are available for installation in motor vehicles or factory installed, as well as for the home, portable and wireless devices, and through an Internet connection on a personal computer.

Vehicles that are equipped with a factory installed SiriusXM Satellite Radio system include:

- Hardware and an introductory trial subscription term, which begins on the date of sale or lease of the vehicle.
- For a small upgrade fee, access to SiriusXM music channels, and other select channels over the Internet using any computer connected to the Internet (U.S. customers only).

For information on extended subscription terms, contact SiriusXM at 1-888-539-7474.

*NOTICE*
SiriusXM services require a subscription sold separately, or as a package, by Sirius XM Radio Inc. If you decide to continue service after your trial, the subscription plan you choose will automatically renew thereafter and you will be charged according to your chosen payment method at then-current rates. Fees and taxes apply. To cancel you must call SiriusXM at 1-866-635-2349. See SiriusXM Customer Agreement for complete terms at www.siriusxm.com. SiriusXM U.S. satellite and data services are available only in the 48 contiguous states, DC and Puerto Rico (with coverage limitations). SiriusXM satellite service is also available in Canada; see www.siriusxm.ca. All fees and programming subject to change. Sirius, XM and all related marks and logos are trademarks of Sirius XM Radio Inc.
Features of your vehicle

SiriusXM Radio Mode

SiriusXM Radio Mode Display

Controls

(1) Mode Display
Displays current operating mode.

(2) Channel Information
Displays the category, channel number, channel name, artist and title information.

(3) Preset
Displays current playing preset number [1] ~ [6].

(4) Preset Display
Displays saved presets.

With the SiriusXM Satellite Radio Mode Button

Your vehicle is equipped with a 3-month trial subscription to SiriusXM so you have access to over 140 channels of music, information, and entertainment programming.

Activation

In order to extend or reactivate your Sirius Select subscription, you will need to contact SiriusXM Customer Care at 1-800-643-2112. Have your 12-digit RID (Radio Identification Number)/ESN (Electronic Serial Number) ready. To retrieve the RID/ESN, turn on the radio, press the [RADIO] button, and tune to channel zero.

Please note that the vehicle will need to be turned on, in Sirius mode, and have an unobstructed view of the sky in order for the radio to receive the activation signal.
Features of your vehicle

Seek
Press the [SEEK TRACK] button to play the previous/next channel.
If the “Category” icon is displayed, channels are changed within the current category.

Tune
Turn the TUNE knob to select the desired channel.

Scan
Press the [SCAN] button to scan all channels with superior reception for 10 seconds each.
Once scan is complete, the previously played channel will be restored.
During Scan, pressing the [SCAN] button again will cancel the scan operation and restore the previously played channel.
If the “Category” icon is displayed, channels are changed within the current category.

Searching Categories
Select the category by using the [CAT/FOLDER] button and press the TUNE knob to select.
Channels for the selected category are played.

Troubleshooting
1. Antenna Error
   If this message is displayed, the antenna or antenna cable is broken or unplugged. Please consult with your Hyundai dealership.
2. No Signal
   If this message is displayed, it means that the antenna is covered and that the SiriusXM Satellite Radio signal is not available. Ensure the antenna is uncovered and has a clear view of the sky.

Selecting Presets/Saving Presets
Press the [Preset] button to display the broadcast information for the channel saved to each button.
Press the [1] ~ [6] buttons to play the desired preset.
While listening to a channel you want to save as a preset, press and hold one of the [1] ~ [6] preset buttons to save the current channel to the selected preset.
Media Mode

Pressing the [MEDIA] button will change the operating mode in the order of CD ➟ USB (iPod®) ➟ AUX ➟ My Music ➟ BT (Bluetooth®) Audio.

If [Mode Pop up] is turned on within [SETUP] ➤ [Display], then pressing the [MEDIA] button will display the Media Pop-up Mode screen.

Turn the TUNE knob to move the focus. Press the knob to select.

The media mode pop up screen can be displayed only when there are two or more media modes turned on.

Mode Display on the Status Bar

When a Bluetooth® Wireless Technology, iPod®, USB, or AUX device is connected or a CD is inserted, the corresponding mode icon will be displayed.

**MENU : Audio CD**

**Audio CD Mode Display Controls**

1. **Mode**
   Displays current operating mode.

2. **Operation State**
   From Repeat/Shuffle/Scan, displays the current operating function.

3. **Track Info**
   Displays information about the current track.

4. **Play/Pause**
   Changes the play/pause state.

5. **Play Time**
   Displays the current play time.

6. **Info**
   Shows detailed information about the current track.

7. **Shuffle**
   Turns the Shuffle feature on/off.

8. **Repeat**
   Turns the Repeat feature on/off.

9. **List**
   Moves to the list screen.
   Turn the TUNE knob left/right to search for tracks. Once the desired track is displayed, press the knob to select and play.
With the Audio CD Mode

Playing/Pausing CD Tracks
Once an audio CD is inserted, the mode will automatically start and begin playing.
While playing, press the [II] button to pause and press [▶] button to play.
Only genuine audio CDs are supported. Other discs may result in recognition failure (e.g. copy CD-R, CDs with labels).
The artist and title information are displayed on the screen if track information is included within the audio CD.

Changing Tracks
Press the [SEEK TRACK] button to move to the previous or next track.
Pressing the [SEEK TRACK ↓] button after the track has been playing for 2 seconds will start the current track from the beginning.
Pressing the [SEEK TRACK ↑] button before the track has been playing for 1 second will start the previous track.

Selecting from the List
Turn the TUNE knob left/right to search for the desired track. Once you find the desired track, press the TUNE knob to start playing.

Rewinding / Fast-forwarding Tracks
While playing, press and hold the [SEEK TRACK] button to rewind or fast-forward the current track.

Scan
Press the [SCAN] button to play the first 10 seconds of each file.
Features of your vehicle

MENU : MP3 CD

MP3 CD Mode Display Controls

(1) Mode
Displays current operating mode.

(2) Operation State
From Repeat/Shuffle/Scan, displays the current operating function.

(3) File Index
Displays the current file number.

(4) File Info
Displays information about the current file.

(5) Play/Pause
Changes the play/pause state.

(6) Play Time
Displays the current play time.

(7) Info
Shows detailed information about the current file.
Press the [Info] button to display details about the current file.
When the ‘Folder File’ option is set as the default display within Display setup, the album/artist/file information are displayed as detailed file information.
When the ‘Album Artist Song’ option is set as the default display, the folder name/file name are displayed as detailed file information.
The title, artist and album info are displayed only when such information is recorded within the MP3 file ID3 tag.
(8) Shuffle
Turns the Shuffle feature on/off.
Each time the button is pressed, the feature changes in the order of Shuffle Folder → Shuffle All → Off.
• Shuffle Folder : Plays all files within the current folder in shuffle order.
• Shuffle All : Plays all files in shuffle order.

(9) Repeat
Turns the Repeat feature on/off.
Each time the button is pressed, the feature changes in the order of Repeat → Repeat Folder → Off.
• Repeat : Repeats the current file.
• Repeat Folder : Repeats all files within the current Folder.

(10) Copy
Copies the current file into My Music. Selecting another feature during copying will display a pop-up asking whether you wish to cancel copying. To cancel, select ‘Yes’.

(11) List
Moves to the list screen. Turn the TUNE knob left/right to search for files. Once the desired file is displayed, press the knob to select and play.

With the MP3 CD Mode
Playing/Pausing MP3 Files
Once an MP3 disc is inserted the mode will automatically start and begin playing. While playing, press the [II] button to pause and press [▶] to play.

If there are numerous files and folders within the disc, reading time could take more than 10 seconds and the list may not be displayed or song searches may not operate. Once loading is complete, try again.

Changing Files
Press the [SEEK TRACK] button to move to the previous or next file.
Pressing the [SEEK TRACK ▶] button after the file has been playing for 2 seconds will start the current file from the beginning.
Pressing the [SEEK TRACK ▼] button before the file has been playing for 1 second will start the previous file.
Features of your vehicle

Selecting from the List
Turn the TUNE knob left/right to search for the desired file.
Once you find the desired file, press the TUNE knob to start playing.

Rewinding / Fast-forwarding Files
While playing, press and hold the [SEEK TRACK] button to rewind or fast-forward the current file.

Scan
Press the [SCAN] button to play the first 10 seconds of each file.

Searching Folders
Press the [CAT/FOLDER] button to select and search folders.
Once the desired folder is displayed, press the TUNE knob to select. The first file within the selected folder will begin playing.
MENU : USB

USB Mode Display Controls

(1) Mode
Displays current operating mode.

(2) Operation State
From Repeat/Shuffle/Scan, displays the current operating function.

(3) File Index
Displays the current file number.

(4) File Info
Displays information about the current file.

(5) Play/Pause
Changes the play/pause state.

(6) Play Time
Displays the current play time.

(7) Info
Displays detailed information for the current file.
When the ‘Folder File’ option is set as the default display within Display setup, the album/artist/file information are displayed as detailed file information.
When the ‘Album Artist Song’ option is set as the default display, the folder name/file name are displayed as detailed file information.
The title, artist and album info are displayed only when such information are recorded within the MP3 file ID3 tag.
(8) Shuffle
Turns the Shuffle feature on/off.
Each time the button is pressed, the feature changes in the order of Shuffle Folder ➟ Shuffle All ➟ Off.
• Shuffle Folder: Plays the files in the current folder in shuffle order.
• Shuffle All: Plays all files in shuffle order.

(9) Repeat
Turns the Repeat feature on/off.
Each time the button is pressed, the feature changes in the order of Repeat ➟ Repeat Folder ➟ Off.
• Repeat: Repeats the current file.
• Repeat Folder: Repeats all files within the current folder.

(10) Copy
Copies the current file into My Music. Selecting another feature during copying will display a pop-up asking whether you wish to cancel copying. To cancel, select ‘Yes’.

(11) List
Moves to the list screen.
Turn the TUNE knob left/right to search for files. Once the desired file is displayed, press the knob to select and play.

With the USB Mode
Playing/Pausing USB Files
Once a USB is connected, the mode will automatically start and begin playing a USB file. While playing, press the [II] button to pause and press [▶] button to play.
Loading may require additional time if there are many files and folders within the USB and may result in faulty list display or file search. Normal operations will resume once loading is complete.
The device may not support normal operation when using a USB memory type besides (Metal Cover Type) USB Memory.
Features of your vehicle

Changing Files
Press the [SEEK TRACK] button to move to the previous or next file.
Pressing the [SEEK TRACK ∨] button after the file has been playing for 2 seconds will start the current file from the beginning.
Pressing the [SEEK TRACK ∨] button before the file has been playing for 1 second will start the previous file.

Selecting from the List
Turn the TUNE knob left/right to search for the desired file.
Once you find the desired file, press the TUNE knob to start playing.

Rewinding / Fast-forwarding Files
While playing, press and hold the [SEEK TRACK] button to rewind or fast-forward the current file.

Scan
Press the [SCAN] button to play the first 10 seconds of each file.

Searching Folders
Press the [CAT/FOLDER] button to select and search folders.
Once the desired folder is displayed, press the TUNE knob to select.
The first file within the selected folder will begin playing.

   From Repeat/Shuffle, displays the current operating function.

3. **Song Index**
   Displays the current song/total number of songs.

4. **Song Info**
   Displays information about the current song.

5. **Play/Pause**
   Changes the play/pause state.

6. **Play Time**
   Displays the current play time.

7. **Shuffle**
   Turns the Shuffle feature on/off. Each time the button is pressed, the feature changes in the order of Shuffle Album ➞ Shuffle All ➞ Off.
   - Shuffle Album : Shuffle Album plays album in shuffle order.
   - Shuffle All : Plays all songs in shuffle order.

8. **Repeat**
   Turns the Repeat feature on/off.
   - Repeat : Repeats the current song

9. **List**
   Moves to the list screen.
   Turn the TUNE knob left/right to search for the desired category.
   Once you find the desired category, press the TUNE knob to select and play.
**With the iPod® Mode**

**Playing/Pausing iPod® Songs**
Once an iPod® is connected, the mode will automatically start and begin playing an iPod® song. While playing, press the [II] button to pause and press [▶] button to play. iPod®s with unsupported communication protocols may not properly operate in the audio system.

**Changing Songs**
Press the [SEEK TRACK] button to move to the previous or next song. Pressing the [SEEK TRACK ▶] button after the song has been playing for 2 seconds will start the current song from the beginning. Pressing the [SEEK TRACK ▶] button before the song has been playing for 1 second will start the previous song. Slight time differences may exist depending on your iPod® product.

**Rewinding / Fast-forwarding Songs**
While playing, press and hold the [SEEK TRACK] button to rewind or fast-forward the current song.

**Searching Categories**
Turn the TUNE knob left/right to search for the desired category. Once you find the desired category, press the TUNE knob to select and play. There are eight categories that can be searched, including Playlists, Artists, Albums, Genres, Songs, Composers, Audiobooks and Podcasts.

**Category Menu**
(1) Displays the play screen.
(2) Moves to the iPod® root category screen.
(3) Moves to the previous category. If the search mode is accessed while playing a song, the most recently searched category is displayed. Search steps upon initial connection may differ depending on the type of iPod® device.
**MENU : AUX**

**AUX Mode Display Controls**

Press the [MEDIA] button ➤ Select [AUX]
An external device can be connected to play music.

**Connecting an External Device**

External audio players (Camcorders, car VCR, etc.) can be played through a dedicated cable.

If an external device connector is connected with the AUX terminal, then AUX mode will automatically operate. Once the connector is disconnected, the previous mode will be restored.

AUX mode can be used only when an external audio player (camcorder, car VCR, etc.) has been connected. The AUX volume can be controlled separately from other audio modes.

Connecting a connector jack to the AUX terminal without an external device will convert the system to AUX mode, but only output noise.

When an external device is not being used, also remove the connector jack.

When the external device power is connected to the power jack, playing the external device may output noise. In such cases, disconnect the power connection before use.

Fully insert the AUX cable to the AUX jack upon use.
Features of your vehicle

**MENU : My Music**

*My Music Mode Display Controls*

1. **Mode**
   Displays current operating mode.

2. **Operation State**
   From Repeat/Shuffle/Scan, displays the current operating function.

3. **File Index**
   Displays the current file/total number of files.

4. **File Info**
   Displays information about the current file.

5. **Play/Pause**
   Changes the play/pause state.

6. **Play Time**
   Displays the current play time.

7. **Info**
   Displays detailed information for the current file. The title, artist and album info are displayed only when such information is recorded within the MP3 file ID3 tag.

8. **Shuffle**
   Turns the Shuffle feature on/off.

9. **Repeat**
   Turns the Repeat feature on/off.

10. **Delete**
    Deletes the current file.

11. **List**
    Moves to the list screen. Turn the TUNE knob left/right to search for files. Once the desired file is displayed, press the knob to select and play.
Features of your vehicle

With the My Music Mode

Playing/Pausing My Music Files
While playing, press the [II] button to pause and press [▶] button to play. If there are no files saved within My Music, the [My Music] button will be disabled.

Changing Files
Press the [SEEK TRACK] button to move to the previous or next file. Pressing the [SEEK TRACK ▶] button after the file has been playing for 2 seconds will start the current file from the beginning. Pressing the [SEEK TRACK ▶] button before the file has been playing for 1 second will start the previous file.

Selecting from the List
Turn the TUNE knob left/right to search for the desired file. Once you find the desired file, press the TUNE knob to start playing. From the List screen, it is possible to delete files you previously saved into My Music.

List Menu
(1) Moves to the previous screen.
(2) Selects all files.
(3) Deselects all selected files.
(4) Deletes selected files.
After selecting the files you want to delete, press the [Delete] button to delete the selected files.
If there is memory available, up to 6,000 files can be saved. Identical files cannot be copied more than 1,000 times.
To check memory information, go to [SETUP] ➤ [System] ➤ [Memory Information].

Rewinding / Fast-forwarding Files
While playing, press and hold the [SEEK TRACK] button to rewind or fast-forward the current file.

Scan
Press the [SCAN] button to play the first 10 seconds of each file.
Features of your vehicle

**MENU: Bluetooth® Wireless Technology Audio**

**With Bluetooth® Wireless Technology Audio Mode**

Playing/Pausing Bluetooth® Wireless Technology Audio

Once a Bluetooth® Wireless Technology device is connected, the mode will automatically start.

While playing, press the [▶■] button to pause and press [▶■] button to play.

The play/pause feature may operate differently depending on the mobile phone.

Changing Files

Press the [SEEK TRACK] button to move to the previous or next file.

Setting Connection

If a Bluetooth® Wireless Technology device has not been connected, press the [SETUP] button → [Phone] button to display the Bluetooth® Wireless Technology connection screen.

It is possible to use the pair phone, connect/disconnect and delete features from your Bluetooth® Wireless Technology phone.

If music is not yet playing from your mobile device after converting to Bluetooth® Wireless Technology Audio mode, pressing the play button once may start playing the mode.

Check to see that music is playing from the Bluetooth® Wireless Technology device after converting to Bluetooth® Wireless Technology Audio Mode.
Features of your vehicle

Phone Mode

Making a call using the Steering wheel controls

1. Used to control volume.
2. When pressed shortly
   - Radio mode: Searches broadcast frequencies and channels.
   - Media (CD/USB/iPod®/My Music) modes: Changes the track, file or chapter.
   - BT Audio mode may not be supported in some mobile phones.
3. Mutes audio volume.
4. Each time this button is pressed, the mode is changed in the order of FM1 ➞ FM2 ➞ AM ➞ XM1 ➞ XM2 ➞ XM3 ➞ CD ➞ USB(iPod®) ➞ AUX ➞ My Music ➞ BT Audio.
   If the media is not connected or a disc is not inserted, corresponding modes will be disabled.
5. When pressed shortly
   - Starts voice recognition.
   - When selecting during a voice prompt, stops the prompt and converts to voice command waiting state.
6. When pressed shortly
   - When pressed in the phone screen, displays call history screen.
   - When pressed in the dial screen, makes a call.
   - When pressed in the incoming call screen, answers the call.
   - When pressed during call waiting, switches to waiting call. (Call Waiting)
7. Ends phone call.
Features of your vehicle

**Bluetooth® Wireless Technology**

**When No Devices have been Paired**

1. Press the [PHONE] button or the [CALL] button on the steering wheel controls. The following screen is displayed.
2. Press the [OK] button to enter the Pair Phone screen.

3. From your Bluetooth® Wireless Technology device (i.e. Mobile Phone), search and select your car audio system.

*SSP : Secure Simple Pairing
Non SSP supported device:

4. After a few moments, a screen is displayed where the passkey is entered.
   Enter the passkey "0000" to pair your Bluetooth® Wireless Technology device with the car audio system.

SSP supported device:

4. After a few moments, a screen is displayed 6 digits passkey.
   Check the passkey on your Bluetooth® Wireless Technology device and confirm.

5. Once pairing is complete, the following screen is displayed.
If Bluetooth® Wireless Technology devices are paired but none are currently connected, pressing the [PHONE] button or the [CALL] button on the steering wheel controls the following screen. Press the [Pair] button to pair a new device or press the [Connect] to connect a previously paired device.

**NOTICE**

[Image of Bluetooth setup screen]

To use Bluetooth, pair or connect a phone.

**Pairing through [PHONE] Setup**

Press the [SETUP] button ➤ Select [Phone]

**Paired Phone List**

Press the [SETUP] button ➤ Select [Phone] ➤ Select [Paired Phone List].
- Connected Phone: Device that is currently connected.
- Paired Phone: Device that is paired but not connected.

**Pair Phone**

The following steps are the same as those described in the section “When No Devices have been Paired” on the previous page.

[Image of paired phone list]

**Connecting a Device**

From the paired phone list, select the device you want to connect and press the [Connect](1) button.
Features of your vehicle

**NOTICE**
- When deleting the currently connected device, the device will automatically be disconnected to proceed with the deleting process.
- If a paired Bluetooth® Wireless Technology device is deleted, the device’s call history and contacts data will also be deleted.
- To re-use a deleted device, you must pair the device again.

**Disconnecting a Device**
From the paired phone list, select the currently connected device and press the [Disconnect](2) button.

**Deleting a Device**
From the paired phone list, select the device you want to delete and press the [Delete](3) button.

**Changing Priority**
It is possible to pair up to five Bluetooth® Wireless Technology devices with the car audio system. The “Change Priority” feature is used to set the connection priority of paired phones.
From the paired phone list, select the phone you want to switch to the highest priority, then press the [Change priority](4) button from the Menu. The selected device will be changed to the highest priority.
Phone Menu Screen

Phone Menus
With a Bluetooth® Wireless Technology device connected, press the [PHONE] button to display the Phone menu screen.

- Favorites : Up to 20 frequently used contacts saved for easy access.
- Call History : Displays the call history list screen.
- Contacts : Displays the Contacts list screen.
- Dial Number : Displays the dial screen where numbers can be dialed to make calls.
- Setup : Displays Phone related settings.

*NOTICE*
- If you press the [Call History] button but there is no call history data, a prompt is displayed which asks to download call history data.
- If you press the [Contacts] button but there is no contacts data stored, a prompt is displayed which asks to download contacts data.
- This feature may not be supported in some mobile phones. For more information on download support, refer to your mobile phone user’s manual.

**NOTICE**
- Saved favorite contact : Connects call upon selection.
- To add favorite : Downloaded contacts be saved as favorite.
- Delete All : Delete all stored favorite contacts.

**NOTICE**
- To save Favorite, contacts should be downloaded.
- Contact saved in Favorites will not be automatically updated if the contact has been updated in the phone. To update Favorites, delete the Favorite and create a new Favorite.
Features of your vehicle

Call History
A list of incoming, outgoing and missed calls is displayed. Press the [Download] button to download the call history.
- **Call History**: Displays recent calls. (call history)
- **Download**: Download Recent Call History.
- Call history may not be saved in the call history list in some mobile phones.
- Calls received with hidden caller ID will not be saved in the call history list.
- Calling through the call history is not possible when there is no call history stored or a Bluetooth® Wireless Technology phone is not connected.
- Up to 50 received, dialed and missed calls are stored in Call History.
- Time of received/dialed calls and call time information are not saved.

Contacts
The list of saved phone book entries is displayed. Press the [Download] button to download the call history.
- **Contacts List**: Displays downloaded contacts entries.
- **Sort by**: Find a contact in alphabetical order.
- **Download**: Download contacts entries.
NOTICE

• Up to 1,000 contacts saved in your Bluetooth® Wireless Technology phone can be downloaded into the car contacts. Contacts that have been downloaded to the car cannot be edited or deleted on the phone.
• Mobile phone contacts are managed separately for each paired Bluetooth® Wireless Technology device (max 5 devices x 1,000 contacts each). Previously downloaded data is maintained even if the Bluetooth® Wireless Technology device has been disconnected. (However, the contacts and call history saved to the phone will be deleted if a paired phone is deleted.)
• It is possible to download contacts during Bluetooth® streaming audio.
• When downloading contacts, the icon will be displayed within the status bar.

(Continued)

• It is not possible to begin downloading a contact list when the contact download feature has been turned off within the Bluetooth® Wireless Technology device. In addition, some devices may require device authorization upon attempting to download contacts. If downloading does not normally occur, check the Bluetooth® Wireless Technology device settings or the screen state.
• The contacts download feature may not be supported in some mobile phones. For more information of supported Bluetooth® devices and function support, refer to your phone’s user manual.

Calling by Dialing a Number

• Dial Pad : Used to enter phone number.
• Call : If a number has been entered, calls the number. If no number has been entered, switches to call history screen.
• End : Deletes the entered phone number.
• Delete : Deletes entered numbers one digit at a time.
Features of your vehicle

Answering a Call
Answering a call with a Bluetooth® Wireless Technology device connected will display the following screen.

- **Caller**: Displays the other party’s name when the incoming caller is saved within your contacts.
- **Incoming Number**: Displays the incoming number.
- **Accept**: Accepts the incoming call.
- **Reject**: Rejects the incoming call.

> **NOTICE**

- When an incoming call pop-up is displayed, most Audio and SETUP mode features are disabled. Only the call volume will operate.
- The telephone number may not be properly displayed in some mobile phones.

During a Handsfree Call

- **Caller**: Displays the other party’s name if the incoming caller is saved within your contacts.
- **Incoming Number**: Displays the incoming number.
- **Call time**: Displays the call time.
- **End**: Ends call.
- **Private**: Converts to Private mode.
- **Out Vol.**: Sets call volume as heard by the other party.
- **Mute**: Turns Mic Mute On/Off.

> **NOTICE**

If the mic is muted, the other party will not be able to hear your voice.
Voice Recognition Mode

Using Voice Recognition

Starting Voice Recognition
Shortly press the button on the steering wheel remote controller. Say a command.

If prompt feedback is in [ON], then the system will say “Please say a command after the beep (BEEP)”

- If prompt feedback is in [ON] mode, then the system will only say “(BEEP)”
- To change Prompt Feedback [On]/[Off], go to [SETUP] ➤ [System] ➤ [Prompt Feedback]

For proper recognition, say the command after the voice instruction and beep tone.

NOTICE
Contact List Best Practices
1) Do not store single-name entries (e.g., “Bob”, “Mom”, “Kim”, etc.). Instead, always use full names (including first and last names) for all contacts (e.g., use “Jacob Stevenson” instead of “Dad”).
2) Do not use abbreviations (i.e., use “Lieutenant” instead of “Lt.” or “Sergeant” instead of “Sgt.”).
3) Do not use acronyms (i.e., use “County Finance Department” instead of “CFD”).
4) Do not use special characters (e.g., “@”, “hyphen -”, “asterisk *”, “ampersand &”).
5) If a name is not recognized from the contact list, change it to a more descriptive name (e.g., use “Grandpa Joseph” instead of “Pa Joe”).

Skipping Prompt Messages
While prompt message is being stated ➤ Shortly press the button on the steering remote controller.
The prompt message is immediately ended and the beep tone will sound. After the “Beep”, say the voice command.

Re-starting Voice Recognition
While system waits for a command ➤ Shortly press the button on the steering remote controller.
The command wait state is immediately ended and the beep tone will sound. After the “Beep”, say the voice command.
Features of your vehicle

Illustration on using Voice Recognition

Starting Voice Recognition
Shortly pressing the \( \text{\textregistered} \) button:

More Help
Here are some examples of mode commands.
You can say a radio type like ‘FM’, ‘AM’, or ‘Satellite’.
You can also say a media source like ‘USB’, ‘My Music’, or ‘iPod®’.
Additionally, there are phone commands like ‘Contacts’, ‘Call History’, or ‘Dial Number’.
You can find more detailed commands in the user’s manual.
Please say a command after the beep.

Setup Mode

Press the [SETUP] button to display the Setup screen. You can select and control options related to [Display], [Sound], [Clock/Calendar], [Phone] and [System].

With the Display Button

Press the [SETUP] button ➤ Select [Display]. You can select and control options related to [Brightness], [Mode Pop up] and [Media Display].

Adjusting the Brightness

Use the [Left/Right] buttons to adjust the screen brightness or set the Brightness on Automatic, Day or Night mode. Press the [Default] button to reset.

- Automatic: Adjusts the brightness automatically.
- Day: Always maintains the brightness on high.
- Night: Always maintains the brightness on low.

Mode Pop-up

This feature is used to display the Mode Pop-up screen when entering radio and media modes. When this feature is turned on, pressing the [RADIO] or [MEDIA] button will display the Mode Pop-up screen.

✽ NOTICE

The media Mode Pop-up screen can be displayed only when two or more media modes have been connected.
Features of your vehicle

**Media Display**
This feature is used to change the information displayed within USB and MP3 CD modes.
- Folder File: Displays file name and folder name.
- Album Artist Song: Displays album name/artist name/song.

**With the Sound Button**
Press the [SETUP] button ➤ Select [Sound].
You can select and control options related to [Sound Setting], [Speed Dependent Vol.], [Voice Recognition Vol.] and [Touch Screen Beep].

**Sound Setting**
Use the [Up/Down/Left/Right] buttons to adjust the Fader/Balance settings.
Use the [Left/Right] buttons to adjust the Bass/Middle/Treble settings.
Press the [Default] button to reset.
Features of your vehicle

SDVC (Speed Dependent Volume Control)
The volume level is controlled automatically according to the vehicle speed. SDVC can be set by selecting from On/Off.

Voice Recognition Volume
Use the [-], [+] buttons adjust the Voice Recognition volume.

Touch Screen Beep
This feature is used to turn the touch screen beep on/off.
Features of your vehicle

**With the Clock/Calendar Button**
Press the [SETUP] button ➤ Select [Clock/Calendar].
You can select and control options related to [Clock Settings], [Calendar Settings], [Time Format] and [Clock Display].

**Clock Settings**
Use the [Up/Down] buttons to set the Hour, Minutes setting and select AM/PM.
Press and hold the [CLOCK] button to set the Clock/Calendar screen.

**Calendar Settings**
Use the [Up/Down] buttons to set the Day, Month and Year setting.

**Time Format**
This feature is used to change the clock format between 12hr or 24hr.

**Clock Display**
This feature is used to display a clock on the screen when the audio system is turned off.
**With the Phone Button**

Press the [SETUP] button ➤ Select [Phone].

You can select and control options related to [Pair Phone], [Paired Phone List], [Contacts Download], [Auto Download], [Outgoing Volume] and [Bluetooth System Off].

---

**Pairing a New Device**

*Bluetooth® Wireless Technology* devices can be paired with the audio system.

For more information, refer to the “Pairing through Phone Setup” section within *Bluetooth® Wireless Technology*.

---

**Viewing Paired Phone List**

This feature is used to view mobile phones that have been paired with the audio system. Upon selecting a paired phone, the setup menu is displayed.

For more information, refer to the “Setting Bluetooth® Wireless Technology Connection” section within *Bluetooth® Wireless Technology*.

(1) Moves to the previous screen.
(2) Connect/Disconnect Phone : Connect/Disconnects currently selected phone.
(3) Delete : Deletes the currently selected phone.
(4) Change priority : Sets currently selected phone to highest connection priority.
NOTICE - Before Downloading Contacts

- Only contacts within connected phones can be downloaded. Also check to see that your mobile phone supports the download feature.
- To learn more about whether your mobile phone supports contacts downloads, refer to your mobile phone user’s manual.
- The contacts for only the connected phone can be downloaded.

**Downloading Contacts**

As the contacts are downloaded from the mobile phone, a download progress bar is displayed.
- Upon downloading phone contacts, the previous corresponding data is deleted.
- This feature may not be supported in some mobile phones.
- Voice Recognition may not operate while contacts are being downloaded.

**Outgoing Volume**

Use the [-], [+] buttons to adjust the outgoing volume level.
While on a call, the volume can be changed by using the [SEEK TRACK] button.
Turning Bluetooth System Off

Once Bluetooth® Wireless Technology is turned off, Bluetooth® Wireless Technology related features will not be supported within the audio system.

To turn Bluetooth® Wireless Technology back on, go to [SETUP] ▶ [Phone] and press “Yes”.

With the System Button

Press the [SETUP] button ▶ Select [System].

You can select and control options related to [Memory Information], [Prompt Feedback] and [Language].

Memory Information

This feature displays information related to system memory.

- Using: Displays capacity currently in use.
- Capacity: Displays total capacity.
Features of your vehicle

Prompt Feedback
This feature is used to select the desired prompt feedback option from ON and OFF.
- ON : When using voice recognition, provides detailed guidance prompts.
- OFF : When using voice recognition, omits some guidance prompts.

Language
This feature is used to change the system and voice recognition language.
If the language is changed, the system will restart and apply the selected language.

Declaration of Conformity

FCC

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.

This equipment should be installed and operated with a minimum of 20 cm between the transmitter and your body. This transmitter must not be connected or operated in conjunction with any other antenna or transmitter unless authorized to do so by the FCC.

Driving your vehicle

⚠️ WARNING - ENGINE EXHAUST CAN BE DANGEROUS!
Engine exhaust fumes can be extremely dangerous. If, at any time, you smell exhaust fumes inside the vehicle, open the windows immediately.

- **Do not inhale exhaust fumes.**
  Exhaust fumes contain carbon monoxide, a colorless, odorless gas that can cause unconsciousness and death by asphyxiation.

- **Be sure the exhaust system does not leak.**
  The exhaust system should be checked whenever the vehicle is raised to change the oil or for any other purpose. If you hear a change in the sound of the exhaust or if you drive over something that strikes the underneath side of the vehicle, have the exhaust system checked as soon as possible by an authorized HYUNDAI dealer.

- **Do not run the engine in an enclosed area.**
  Letting the engine idle in your garage, even with the garage door open, is a hazardous practice. Never run the engine in your garage any longer than it takes to start the engine and back the vehicle out.

- **Avoid idling the engine for prolonged periods with people inside the vehicle.**
  If it is necessary to idle the engine for a prolonged period with people inside the vehicle, be sure to do so only in an open area with the air intake set at "Fresh" and fan operating at one of the higher speeds so fresh air is drawn into the interior.

If you must drive with the liftgate (tailgate) open because you are carrying objects that make this necessary:
1. Close all windows.
2. Open side vents.
3. Set the air intake control at "Fresh", the air flow control at "Floor" or "Face" and the fan at one of the higher speeds.

To assure proper operation of the ventilation system, be sure the ventilation air intakes located just in front of the windshield are kept clear of snow, ice, leaves or other obstructions.
BEFORE DRIVING

Before entering vehicle
- Be sure that all windows, outside mirror(s), and outside lights are clean.
- Check the condition of the tires.
- Check under the vehicle for any sign of leaks.
- Be sure there are no obstacles behind you if you intend to back up.

Necessary inspections
Fluid levels, such as engine oil, engine coolant, brake fluid, and washer fluid should be checked on a regular basis, with the exact interval depending on the fluid. Further details are provided in Section 7, “Maintenance”.

WARNING
Driving while distracted can result in a loss of vehicle control, that may lead to an accident, severe personal injury, and death. The driver’s primary responsibility is in the safe and legal operation of a vehicle, and use of any handheld devices, other equipment, or vehicle systems which take the driver’s eyes, attention and focus away from the safe operation of a vehicle or which are not permissible by law should never be used during operation of the vehicle.
Before starting

- Close and lock all doors.
- Position the seat so that all controls are easily reached.
- Adjust the inside and outside rearview mirrors.
- Be sure that all lights work.
- Check all gauges.
- Check the operation of warning lights when the ignition switch is turned to the ON position.
- Release the parking brake and make sure the brake warning light goes out.

For safe operation, be sure you are familiar with your vehicle and its equipment.

⚠️ WARNING
All passengers must be properly belted whenever the vehicle is moving. Refer to “Seat belts” in section 3 for more information on their proper use.

⚠️ WARNING - Driving under the influence of alcohol or drugs
Drinking and driving is dangerous. Drunk driving is the number one contributor to the highway death toll each year. Even a small amount of alcohol will affect your reflexes, perceptions, and judgement. Driving while under the influence of drugs is as dangerous or more dangerous than driving drunk. You are much more likely to have a serious accident if you drink or take drugs and drive. If you are drinking or taking drugs, do not drive. Do not ride with a driver who has been drinking or taking drugs. Choose a designated driver or call a cab.

⚠️ WARNING
Always check the surrounding areas near your vehicle for people, especially children, before putting a vehicle into D (Drive) or R (Reverse).
WARNING

• When you intend to park or stop the vehicle with the engine on, be careful not to depress the accelerator pedal for a long period of time. It may overheat the engine or exhaust system and cause fire.

• When you make a sudden stop or turn the steering wheel rapidly, loose objects may drop on the floor and it could interfere with the operation of the foot pedals, possibly causing an accident. Keep all things in the vehicle safely stored.

• If you do not focus on driving, it may cause an accident. Be careful when operating what may disturb driving such as audio or heater. It is the responsibility of the driver to always drive safely.
Driving your vehicle

**KEY**

**Illuminated ignition switch**

*(if equipped)*

Whenever a front door is opened, the ignition switch will be illuminated for your convenience, provided the ignition switch is not in the ON position. The light will go off immediately when the ignition switch is turned on or go off after about 30 seconds when the door is closed.

**Ignition switch position**

*LOCK*

The steering wheel locks to protect against theft. The ignition key can be removed only in the LOCK position. When turning the ignition switch to the LOCK position, push the key inward at the ACC position and turn the key toward the LOCK position.

*ACC (Accessory)*

The steering wheel is unlocked and electrical accessories are operative.

*NOTICE*

If difficulty is experienced turning the ignition switch to the ACC position, turn the key while turning the steering wheel right and left to release the tension.
**ON**
The warning lights can be checked before the engine is started. This is the normal running position after the engine is started.

*Do not leave the ignition switch ON if the engine is not running to prevent battery discharge.*

**START**
Turn the ignition switch to the START position to start the engine. The engine will crank until you release the key; then it returns to the ON position. The brake warning light can be checked in this position.

---

**WARNING - Ignition key**
- Never turn the ignition switch to LOCK or ACC while the vehicle is moving. This would result in loss of directional control and braking function, which could cause an accident.
- The anti-theft steering column lock is not a substitute for the parking brake. Before leaving the driver’s seat, always make sure the shift lever is engaged in P (Park), set the parking brake fully and shut the engine off. Unexpected and sudden vehicle movement may occur if these precautions are not taken.

(Continued)
- Never reach for the ignition switch, or any other controls through the steering wheel while the vehicle is in motion. The presence of your hand or arm in this area could cause a loss of vehicle control, an accident and serious bodily injury or death.
- Do not place any movable objects around the driver’s seat as they may move while driving, interfere with the driver and lead to an accident.
Driving your vehicle

Starting the engine

⚠️ WARNING
Always wear appropriate shoes when operating your vehicle. Unsuitable shoes (high heels, ski boots, etc.) may interfere with your ability to use the brake or the accelerator pedal.

1. Make sure the parking brake is applied.
2. Place the transaxle shift lever in P (Park). Depress the brake pedal fully.
   You can also start the engine when the shift lever is in the N (Neutral) position.
3. Turn the ignition switch to START and hold it there until the engine starts (a maximum of 10 seconds), then release the key.
   It should be started without depressing the accelerator pedal.
4. Do not wait for the engine to warm up while the vehicle remains stationary.
   Start driving at moderate engine speeds. (Steep accelerating and decelerating should be avoided.)

⚠️ CAUTION
If the engine stalls while you are in motion, do not attempt to move the shift lever to the P (Park) position. If traffic and road conditions permit, you may put the shift lever in the N (Neutral) position while the vehicle is still moving and turn the ignition switch to the START position in an attempt to restart the engine.

⚠️ CAUTION
Do not engage the starter for more than 10 seconds. If the engine stalls or fails to start, wait 5 to 10 seconds before re-engaging the starter. Improper use of the starter may damage it.
When the front door is opened, the engine start/stop button will illuminate for your convenience. The light will go off after about 30 seconds when the door is closed. It will also go off immediately when the theft-alarm system is armed.

**Engine start/stop button position**

**OFF**

To turn off the engine (START/RUN position) or vehicle power (ON position), press the engine start/stop button with the shift lever in the P (Park) position. When you press the engine start/stop button without the shift lever in the P (Park) position, the engine start/stop button will not change to the OFF position but to the ACC position.

**NOTICE**

You are able to turn off the engine (START/RUN) or vehicle power (ON), only when the vehicle is not in motion.

**CAUTION**

In an emergency situation while the vehicle is in motion, you are able to turn the engine off and to the ACC position by pressing the engine start/stop button for more than 2 seconds or 3 times successively within 3 seconds. If the vehicle is still moving, you can restart the engine without depressing the brake pedal by pressing the engine start/stop button with the shift lever in the N (Neutral) position.
Driving your vehicle

**ACC (Accessory)**

Press the engine start/stop button while it is in the OFF position without depressing the brake pedal.

The electrical accessories are operational. If the engine start/stop button is in the ACC position for more than 1 hour, the button is turned off automatically to prevent battery discharge.

**ON**

Press the engine start/stop button while it is in the ACC position without depressing the brake pedal.

The warning lights can be checked before the engine is started. Do not leave the engine start/stop button in the ON position for a long time. The battery may discharge, because the engine is not running.

**START/RUN**

To start the engine, depress the brake pedal and press the engine start/stop button with the shift lever in the P (Park) or the N (Neutral) position. For your safety, start the engine with the shift lever in the P (Park) position.
**NOTICE**

If you press the engine start/stop button without depressing the brake pedal, the engine will not start and the engine start/stop button changes as follow:

OFF ➔ ACC ➔ ON ➔ OFF or ACC

**NOTICE**

If you leave the engine start/stop button in the ACC or ON position for a long time, the battery will discharge.

**WARNING**

- Never press the engine start/stop button while the vehicle is in motion. This would result in loss of directional control and braking function, which could cause an accident.
- Before leaving the driver's seat, always make sure the shift lever is engaged in P (Park), set the parking brake fully and shut the engine off. Unexpected and sudden vehicle movement may occur if these precautions are not taken.

(Continued)

- Never reach for the engine start/stop button or any other controls through the steering wheel while the vehicle is in motion. The presence of your hand or arm in the area could cause loss of vehicle control, an accident and serious bodily injury or death.
- Do not place any movable objects around the driver's seat as they may move while driving, interfere with the driver and lead to an accident.

(Continued)
Driving your vehicle

Starting the engine

1. Carry the smart key or leave it inside the vehicle.
2. Make sure the parking brake is firmly applied.
3. Place the transaxle shift lever in P (Park). Depress the brake pedal fully.
   You can also start the engine when the shift lever is in the N (Neutral) position.
4. Press the engine start/stop button. It should be started without depressing the accelerator pedal.
5. Do not wait for the engine to warm up while the vehicle remains stationary.
   Start driving at moderate engine speeds. (Steep accelerating and decelerating should be avoided.)

• Even if the smart key is in the vehicle, if it is far away from you, the engine may not start.
• When the engine start/stop button is in the ACC position or above, if any door is opened, the system checks for the smart key. If the smart key is not in the vehicle, the “_key” indicator and a message “Key not in vehicle” will appear on the instrument cluster and LCD display. And if all doors are closed, the chime will sound for 5 seconds. The indicator or warning will turn off while the vehicle is moving. Always have the smart key with you.

WARNING
Always wear appropriate shoes when operating your vehicle. Unsuitable shoes (high heels, ski boots, etc.) may interfere with your ability to use the brake or the accelerator pedal.

WARNING
The engine will start, only when the smart key is in the vehicle. Never allow children or any person who is unfamiliar with the vehicle to press the engine start/stop button or related parts.
Driving your vehicle

**NOTICE**

- If the battery is weak or the smart key does not work correctly, you can start the engine by pressing the engine start/stop button with the smart key. The side with the lock button should contact the engine start/stop button directly. When you press the engine start/stop button directly with the smart key, the smart key should contact the button at a right angle.

(Continued)

- When the stop lamp fuse is blown, you cannot start the engine normally. Replace the fuse with a new one. If it is not possible, you can start the engine by pressing the engine start/stop button for 10 seconds while it is in the ACC position. The engine can start without depressing the brake pedal. But for your safety always depress the brake pedal before starting the engine.

**CAUTION**

If the engine stalls while the vehicle is in motion, do not attempt to move the shift lever to the P (Park) position. If the traffic and road conditions permit, you may put the shift lever in the N (Neutral) position while the vehicle is still moving and press the engine start/stop button in an attempt to restart the engine.

**CAUTION**

Do not press the engine start/stop button for more than 10 seconds except when the stop lamp fuse is blown.
**Automatic transaxle operation**

The highly efficient automatic transaxle has 6 forward speeds and one reverse speed. The individual speeds are selected automatically, depending on the position of the shift lever.

The individual speeds are selected automatically in Drive, depending on the position of the accelerator pedal.

**NOTICE**

The first few shifts on a new vehicle may be somewhat abrupt. This is a normal condition, and the shifting sequence will adjust after shifts are cycled a few times by the TCM (Transaxle Control Module) or PCM (Powertrain Control Module).

Depress the brake pedal and the lock release button when shifting.

(If the shift lock system is not equipped, it is not necessary to depress the brake pedal. However, it is recommended to depress the brake pedal to avoid inadvertent movement of the vehicle.)

Press the lock release button when shifting.

The shift lever can be shifted freely.

---

**AUTOMATIC TRANSAXLE**

Press the lock release button when shifting.
For smooth operation, depress the brake pedal when shifting from N (Neutral) to a forward or reverse gear.

**WARNING - Automatic transaxle**

- Always check the surrounding areas near your vehicle for people, especially children, before shifting a vehicle into D (Drive) or R (Reverse).
- Before leaving the driver's seat, always make sure the shift lever is in the P (Park) position; then set the parking brake fully and shut the engine off. Unexpected and sudden vehicle movement can occur if these precautions are not followed in the order identified.

**CAUTION**

- To avoid damage to your transaxle, do not accelerate the engine in R (Reverse) or any forward gear position with the brakes on.
- When stopped on an incline, do not hold the vehicle stationary with engine power. Use the service brake or the parking brake.
- Do not shift from N (Neutral) or P (Park) into D (Drive), or R (Reverse) when the engine is above idle speed.

**Transaxle ranges**

The indicator lights in the instrument cluster displays the shift lever position when the ignition switch is in the ON position.

**P (Park)**

Always come to a complete stop before shifting into P (Park). This position locks the transaxle and prevents the front wheels from rotating.
Driving your vehicle

R (Reverse)
Use this position to drive the vehicle backward.

N (Neutral)
The wheels and transaxle are not engaged. The vehicle will roll freely even on the slightest incline unless the parking brake or service brakes are applied.

D (Drive)
This is the normal forward driving position. The transaxle will automatically shift through a 6-gear sequence, providing the best fuel economy and power.

For extra power when passing another vehicle or climbing grades, depress the accelerator fully, at which time the transaxle will automatically downshift to the next lower gear.

* NOTICE
Always come to a complete stop before shifting into D (Drive).

**WARNING**
- Shifting into P (Park) while the vehicle is in motion will cause the drive wheels to lock which will cause you to lose control of the vehicle.
- Do not use the P (Park) position in place of the parking brake. Move the shift lever to the P (Park) position and set the parking brake fully.
- Never leave a child unattended in a vehicle.

**CAUTION**
The transaxle may be damaged if you shift into P (Park) while the vehicle is in motion.

Always come to a complete stop before shifting into or out of R (Reverse); you may damage the transaxle if you shift into R (Reverse) while the vehicle is in motion, except as explained in “Rocking the vehicle”, in this manual.
Driving your vehicle

Manual shift mode

Whether the vehicle is stationary or in motion, manual shift mode is selected by pushing the shift lever from the D (Drive) position into the manual gate. To return to D (Drive) range operation, push the shift lever back into the main gate.

In manual shift mode, moving the shift lever backwards and forwards will allow you to make gearshifts rapidly. In contrast to a manual transaxle, the manual shift mode allows gearshifts with the accelerator pedal depressed.

Up (+) : Push the lever forward once to shift up one gear.

Down (-) : Pull the lever backwards once to shift down one gear.

* NOTICE

- In manual shift mode, the driver must execute upshifts in accordance with road conditions, taking care to keep the engine speed below the red zone.
- In manual shift mode, only the 6 forward gears can be selected. To reverse or park the vehicle, move the shift lever to the R (Reverse) or P (Park) position as required.
- In manual shift mode, downshifts are made automatically when the vehicle slows down. When the vehicle stops, 1st gear is automatically selected.

(Continued)

- In manual shift mode, when the engine rpm approaches the red zone, the transaxle will upshift automatically.
- To maintain the required levels of vehicle performance and safety, the system may not execute certain gearshifts when the shift lever is operated.
- When accelerating from a stop on a slippery road, push the shift lever forward into the +(up) position. This causes the transaxle to shift into 2nd gear which is better for smooth accelerating on a slippery road.
Driving your vehicle

**Shift lock system**
For your safety, the automatic transaxle has a shift lock system which prevents shifting the transaxle from P (Park) or N (Neutral) into R (Reverse) unless the brake pedal is depressed.

To shift the transaxle from P (Park) or N (Neutral) into R (Reverse):
1. Depress and hold the brake pedal.
2. Start the engine or turn the ignition switch to the ON position to R.
3. Move the shift lever to R.

**WARNING**
Always fully depress the brake pedal before and while shifting out of the P (Park) position to avoid inadvertent motion of the vehicle which could injure persons in or around the vehicle.

**Shift-lock override**
If the shift lever cannot be moved from the P (Park) or N (Neutral) position into R (Reverse) position with the brake pedal depressed, continue depressing the brake, then do the following:
1. Carefully remove the cap covering the shift-lock override access hole.
2. Insert a screwdriver into the access hole and press down on the screwdriver.
3. Move the shift lever.
4. Have your vehicle inspected by an authorized HYUNDAI dealer immediately.

**Ignition key interlock system (if equipped)**
The ignition key cannot be removed unless the shift lever is in the P (Park) position. If the ignition switch is in any other position, the key cannot be removed.
Good driving practices

- Never move the shift lever from P (Park) or N (Neutral) to any other position with the accelerator pedal depressed.
- Never move the shift lever into "P" when the vehicle is in motion.
- Be sure the vehicle is completely stopped before you attempt to shift into R (Reverse) or D (Drive).
- Never take the vehicle out of gear and coast down a hill. This may be extremely hazardous. Always leave the vehicle in gear when moving.
- Do not "ride" the brakes. This can cause them to overheat and malfunction. Instead, when you are driving down a long hill, slow down, move the shift lever to manual shift mode and shift to a lower gear.
- When using manual shift mode, slow down before shifting to a lower gear.
- Always use the parking brake and shift into P (Park) when parking the vehicle. Do not depend on placing the transaxle in P (Park) to keep the vehicle from moving.
- Exercise extreme caution when driving on a slippery surface. Be especially careful when braking, accelerating or shifting gears. On a slippery surface, an abrupt change in vehicle speed can cause the drive wheels to lose traction and the vehicle to go out of control.
- Optimum vehicle performance and economy is obtained by smoothly depressing and releasing the accelerator pedal.

⚠️ WARNING

- Always buckle-up! In a collision, an unbelted occupant is significantly more likely to be seriously injured or killed than a properly belted occupant.
- Avoid high speeds when cornering or turning.
- Do not make quick steering wheel movements, such as sharp lane changes or fast, sharp turns.
- The risk of rollover is greatly increased if you lose control of your vehicle at highway speeds.
- Loss of control often occurs if two or more wheels drop off the roadway and the driver oversteers to reenter the roadway.
- In the event your vehicle leaves the roadway, do not steer sharply. Instead, slow down before pulling back into the travel lanes.
- Never exceed posted speed limits.
Driving your vehicle

Moving up a steep grade from a standing start

To move up a steep grade from a standing start, depress the brake pedal, move the shift lever to D (Drive) and release the parking brake. Depress the accelerator gradually while releasing the service brakes.

⚠️ WARNING
If your vehicle becomes stuck in snow, mud, sand, etc., then you may attempt to rock the vehicle free by moving it forward and backward. Do not attempt this procedure if people or objects are anywhere near the vehicle. During the rocking operation the vehicle may suddenly move forward or backward as it becomes unstuck, causing injury or damage to nearby people or objects.
ALL WHEEL DRIVE (AWD) (IF EQUIPPED)

Engine power can be delivered to the front and rear wheels for maximum traction. AWD is useful when extra traction is required, such as, when driving on slippery, muddy, wet, or snow-covered roads. These vehicles are not designed for challenging off-road use. Occasional off-road use such as established unpaved roads and trails are OK. It is always important when traveling off-highway that the driver carefully reduces the speed to a level that does not exceed the safe operating speed for those conditions. In general, off-road conditions provide less traction and braking effectiveness than normal road conditions. The driver must be especially alert to avoid driving on slopes which tilt the vehicle to either side.

These factors must be carefully considered when driving off-road. Keeping the vehicle in contact with the driving surface and under control in these conditions is always the driver's responsibility for the safety of him/herself and his or her passengers.

<table>
<thead>
<tr>
<th>WARNING - Off road driving</th>
</tr>
</thead>
<tbody>
<tr>
<td>This vehicle is designed primarily for on road use although it can operate effectively off road. However, it was not designed to drive in challenging off-road conditions. Driving in conditions that exceed the vehicle’s intended design or the driver's experience level may result in severe injury or death.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>CAUTION - AWD</th>
</tr>
</thead>
<tbody>
<tr>
<td>When turning sharply on a paved road at low speed while in all wheel drive, steering control will be difficult.</td>
</tr>
</tbody>
</table>

Tight corner brake effect is a unique characteristic of all-wheel drive vehicles caused by the difference in tire rotation at the four wheels. Sharp turns at low speeds should be carried out with caution.
Driving your vehicle

ALL Wheel Drive (AWD) transfer mode selection

</table>
| AWD AUTO        |                  |                 | • When driving in AWD AUTO mode, the vehicle operates similar to conventional 2WD vehicles under normal operating conditions. However, if the system determines that there is a need for the AWD mode, the engine’s driving power is distributed to all four wheels automatically without driver intervention.  
  • When driving on normal roads and pavement, the vehicle moves similar to conventional 2WD vehicles. |
|                 |                  | LOCK            | (Indicator light is not illuminated)                                                                                                        |
| AWD LOCK        |                  | LOCK            | • This mode is used for climbing or descending sharp grades, off-road driving, driving on sandy and muddy roads, etc., to maximize traction.  
  • This mode automatically begins to deactivate at speeds above 19 mph (30 km/h) and is shifted to AWD AUTO mode at speed above 25 mph (40 km/h). If the vehicle decelerates to speeds below 19 mph (30 km/h), however, the transfer mode is shifted into AWD LOCK mode again. |
|                 |                  | (Indicator light is illuminated)                                                                  |

* NOTICE

• When driving on normal roads, deactivate the AWD LOCK mode by pushing the AWD LOCK button (the indicator light goes off). Driving on normal roads with AWD LOCK mode (especially, when cornering) may cause mechanical noise or vibration. The noise and vibration will disappear when the AWD LOCK mode is deactivated. Some parts of the power train may be damaged by prolonged driving with the noise and vibration.  
• When the AWD LOCK mode is deactivated, a shock may be felt as the drive power is delivered entirely to the front wheels. This shock is not a mechanical failure.
For safe all wheel drive operation

⚠️ WARNING - All wheel driving
When conditions demand the use of four-wheel drive, all functions of your vehicle are exposed to extreme stress. Slow down and be ready for changes in the composition and traction of the surface under your tires. If you have any doubt about the safety of the conditions you are facing, stop and consider the best way to proceed. Do not exceed the ability of yourself or your vehicle to operate safely.

- Do not try to drive in deep standing water or mud since such conditions can stall your engine and clog your exhaust pipes. Do not drive down steep hills since it requires extreme skill to maintain control of the vehicle.

- When you are driving up or down hills drive as straight as possible. Use extreme caution in going up or down steep hills, since you may flip your vehicle over depending on the grade, terrain and water/mud conditions.

⚠️ WARNING - Hills
Driving across the contour of steep hills can be extremely dangerous. This danger can come from slight changes in the wheel angle which can destabilize the vehicle or, even if the vehicle is maintaining stability under power, it can lose that stability if the vehicle stops its forward motion. Your vehicle may roll over without warning and without time for you to correct a mistake that could cause serious injury or death.
Driving your vehicle

• You must consciously take the effort to learn how to corner in an AWD vehicle. Do not rely on your experience in conventional 2WD vehicles in choosing safe cornering speed in AWD mode. For starters, you must drive more slowly in AWD.

• Drive carefully off-road because your vehicle may be damaged by rocks or roots of trees. Become familiar with the off-road conditions where you are going to drive before you begin driving.

WARNING - AWD
Reduce speed when you turn corners. The center of gravity of AWD vehicles is higher than that of conventional 2WD vehicles, making them more likely to roll over when you turn corners too fast.

WARNING - Steering wheel
Do not grab the inside of the steering wheel when you are driving off-road. You may hurt your arm by a sudden steering maneuver or from steering wheel rebound due to impact with objects on the ground. You could lose control of the steering wheel.

WARNING - Driving through water
If you need to drive through water, stop your vehicle, set your transfer to the AWD LOCK mode and drive at less than 5 mph (8 km/h).

WARNING - Wind danger
If you are driving in heavy wind, the vehicle’s higher center of gravity decreases your steering control capacity and requires you to drive more slowly.

• Always hold the steering wheel firmly when you are driving off-road.

• Make sure all passengers are wearing seat belts.
Driving your vehicle

**NOTICE**

- Do not drive through water if the level is higher than the bottom of the vehicle.
- Check your brake condition once you are out of mud or water. Press the brake pedal several times as you move slowly until you feel normal braking forces return.
- Shorten your scheduled maintenance interval if you drive in off-road conditions such as sand, mud or water (see “Maintenance under severe usage conditions” in section 7). Always wash your vehicle thoroughly after off road use, especially cleaning the bottom of the vehicle.
- Since the driving torque is always applied to the 4 wheels the performance of the AWD vehicle is greatly affected by the condition of the tires. Be sure to equip the vehicle with four tires of the same size and type.
- A full time all wheel drive vehicle cannot be towed by an ordinary tow truck. Make sure that the vehicle is placed on a flat bed truck for moving.

**WARNING - AWD driving**

- Avoid high cornering speed.
- Do not make quick steering wheel movements, such as sharp lane changes or fast, sharp turns.
- The risk of rollover is greatly increased if you lose control of your vehicle at high speed.
- In a collision, an unbelted person is significantly more likely to die compared to a person wearing a seat belt.
- Loss of control often occurs if two or more wheels drop off the roadway and the driver over steers to re-enter the roadway. In the event your vehicle leaves the roadway, do not steer sharply. Instead, slow down before pulling back into the travel lanes.

**CAUTION - Mud or snow**

If one of the front or rear wheels begins to spin in mud, snow, etc. the vehicle can sometimes be driven out by depressing the accelerator pedal further; however avoid running the engine continuously at high rpm because doing so could damage the AWD system.
Reducing the risk of a rollover

This multi-purpose passenger vehicle is defined as a Sports Utility Vehicle (SUV). SUV’s have higher ground clearance and a narrower track to make them capable of performing in a wide variety of off-road applications. Specific design characteristics give them a higher center of gravity than ordinary vehicles. An advantage of the higher ground clearance is a better view of the road, which allows you to anticipate problems. They are not designed for cornering at the same speeds as conventional passenger vehicles, any more than low-slung sports cars are designed to perform satisfactorily in off-road conditions. Due to this risk, driver and passengers are strongly recommended to buckle their seat belts. In a rollover crash, an unbelted person is more likely to die than a person wearing a seat belt. There are steps that a driver can make to reduce the risk of a rollover. If at all possible, avoid sharp turns or abrupt maneuvers, do not load your roof rack with heavy cargo, and never modify your vehicle in any way.

⚠️ WARNING - Rollover

As with other Sports Utility Vehicle (SUV), failure to operate this vehicle correctly may result in loss of control, an accident or vehicle rollover.

- **Utility vehicles have a significantly higher rollover rate than other types of vehicles.**
- **Specific design characteristics (higher ground clearance, narrower track, etc.) give this vehicle a higher center of gravity than ordinary vehicles.**
- **A SUV is not designed for cornering at the same speeds as conventional vehicles.**
- **Avoid sharp turns or abrupt maneuvers.**
- **In a rollover crash, an unbelted person is significantly more likely to die than a person wearing a seat belt. Make sure everyone in the vehicle is properly buckled up.**

⚠️ WARNING

Your vehicle is equipped with tires designed to provide safe ride and handling capability. Do not use a size and type of tire and wheel that is different from the one that is originally installed on your vehicle. It can affect the safety and performance of your vehicle, which could lead to steering failure or rollover and serious injury. When replacing the tires, be sure to equip all four tires with the tire and wheel of the same size, type, tread, brand and load-carrying capacity. If you nevertheless decide to equip your vehicle with any tire/wheel combination not recommended by HYUNDAI for off road driving, you should not use these tires for highway driving.
Driving your vehicle

WARNING - Jacked vehicle
While a full-time AWD vehicle is raised on a jack, never start the engine or cause the tires to rotate.
There is a danger that rotating tires touching the ground could cause the vehicle to fall off the jack and to jump forward or rearward.

NOTICE
Never engage the parking brake while performing these tests.

- Full-time AWD vehicles must be tested on a special four wheel chassis dynamometer.

- A full-time AWD vehicle should not be tested on a 2WD roll tester. If a 2WD roll tester must be used, perform the following:

1. Check the tire pressures recommended for your vehicle.
2. Place the front wheels on the roll tester for a speedometer test as shown in the illustration.
3. Release the parking brake.
4. Place the rear wheels on the temporary free roller as shown in the illustration.

WARNING - Dynamometer testing
Keep away from the front of the vehicle while the vehicle is in gear on the dynamometer. This is very dangerous as the vehicle can jump forward and cause serious injury or death.
Driving your vehicle

DRIVE MODE INTEGRATED CONTROL SYSTEM (IF EQUIPPED)

The mode changes whenever the DRIVE MODE button is pressed.

- NORMAL
- SPORT
- ECO

When NORMAL mode is selected, it is not displayed on the instrument cluster.

\* NOTICE

If there is a problem with the instrument cluster, the drive mode will be in NORMAL mode and may not change to ECO mode or SPORT mode.

ECO mode

The ECO mode is a optimizes vehicle performance for fuel efficient driving.

- When the ECO mode is selected by pressing the DRIVE MODE button, the ECO indicator (green color) will illuminate.
- If the vehicle was in ECO mode when the engine was shut off, then DRIVE mode will remain in ECO mode upon engine restart.

\* NOTICE

Fuel efficiency depends on the driver's driving habit and road conditions.
When the ECO mode is activated:
- The acceleration response may be slightly reduced as the accelerator pedal is depressed moderately.
- The air conditioner performance may be limited.
- The shift pattern of the automatic transaxle may change.
- The engine noise may get louder.

The above situations are normal conditions when the ECO mode is activated to improve fuel efficiency.

Limitations of the ECO mode operation:
If the following conditions occur while the ECO mode is operating, fuel efficiency may decrease even though there is no change in the ECO indicator.
- When the coolant temperature is low:
  Fuel efficiency may decrease until engine temperature reaches normal.
- When driving up a hill:
  Fuel efficiency may decrease to gain performance when driving uphill because engine torque is restricted.
- When using the automatic transaxle manual shift mode:
  Fuel efficiency may decrease according to the shift location.
- When the accelerator pedal is deeply depressed for a few seconds:
  Fuel efficiency may decrease, judging that the driver wants to speed up.

SPORT mode
SPORT mode manages the driving dynamics by automatically adjusting the steering wheel, engine and transaxle system to optimize performance.
- When the SPORT mode is selected by pressing the DRIVE MODE button, the SPORT indicator (yellow color) will illuminate.
- Restarting of the engine in the SPORT mode resets the DRIVE mode to the NORMAL mode. Thus, when necessary, reselect the SPORT mode.
- When the SPORT mode is activated:
  - The RPM (revolutions per minutes) level is maintained over a certain length of time, even after releasing the accelerator pedal.
  - When accelerating, up-shifting timing is delayed.

*NOTICE*
In the SPORT mode, the fuel efficiency may decrease.
BRAKE SYSTEM
Power brakes
Your vehicle has power-assisted brakes that adjust automatically through normal usage.
In the event that the power-assisted brakes lose power because of a stalled engine or some other reason, you can still stop your vehicle by applying greater force to the brake pedal than you normally would. The stopping distance, however, will be longer.
When the engine is not running, the reserve brake power is partially depleted each time the brake pedal is applied. Do not pump the brake pedal when the power assist has been interrupted.
Pump the brake pedal only when necessary to maintain steering control on slippery surfaces.

⚠️ WARNING - Brakes
- Do not drive with your foot resting on the brake pedal. This will create abnormal high brake temperatures, excessive brake lining and pad wear, and increased stopping distances.
- When descending a long or steep hill, shift to a lower gear and avoid continuous application of the brakes. Continuous brake application will cause the brakes to overheat and could result in a temporary loss of braking performance.

(Continued)

- Wet brakes may impair the vehicle’s ability to safely slow down; the vehicle may also pull to one side when the brakes are applied. Applying the brakes lightly will indicate whether they have been affected in this way. Always test your brakes in this fashion after driving through deep water. To dry the brakes, apply them lightly while maintaining a safe forward speed until brake performance returns to normal.
- Always, confirm the position of the brake and accelerator pedal before driving. If you don’t check the position of the accelerator and brake pedal before driving, you may depress the accelerator instead of the brake pedal. It may cause a serious accident.
In the event of brake failure
If service brakes fail to operate while the vehicle is in motion, you can make an emergency stop with the parking brake. The stopping distance, however, will be much greater than normal.

![WARNING - Parking brake]

Applying the parking brake while the vehicle is moving at normal speeds can cause a sudden loss of control of the vehicle. If you must use the parking brake to stop the vehicle, use great caution in applying the brake.

Disc brakes wear indicator
When your brake pads are worn and new pads are required, you will hear a high-pitched warning sound from your front brakes or rear brakes (if equipped). You may hear this sound come and go or it may occur whenever you depress the brake pedal. Please remember that some driving conditions or climates may cause a brake squeal when you first apply (or lightly apply) the brakes. This is normal and does not indicate a problem with your brakes.

![CAUTION]

- To avoid costly brake repairs, do not continue to drive with worn brake pads.
- Always replace the front or rear brake pads as pairs.

![WARNING - Brake wear]

This brake wear warning sound means your vehicle needs service. If you ignore this audible warning, you will eventually lose braking performance, which could lead to a serious accident.
Driving your vehicle

Parking brake

Applying the parking brake

To engage the parking brake, first apply the foot brake and then depress the parking brake pedal down as far as possible.

⚠️ CAUTION

- Driving with the parking brake applied will cause excessive brake pad and brake rotor wear.
- Do not operate the parking brake while the vehicle is moving except in an emergency situation. It could damage the vehicle system and make endanger driving safety.

Releasing the parking brake

To release the parking brake, depress the parking brake pedal a second time while applying the foot brake. The pedal will automatically extend to the fully released position.
If the parking brake does not release or does not release all the way, have the system checked by an authorized HYUNDAI dealer.

**WARNING**

- To prevent unintentional movement when stopped and leaving the vehicle, do not use the gearshift lever in place of the parking brake. Set the parking brake AND make sure the gearshift lever is securely positioned in P (Park) for automatic transaxle equipped vehicles.
- Never allow anyone who is unfamiliar with the vehicle to touch the parking brake. If the parking brake is released unintentionally, serious injury may occur.

(Continued)

- All vehicles should always have the parking brake fully engaged when parking to avoid inadvertent movement of the vehicle which can injure occupants or pedestrians.

Check the brake warning light by turning the ignition switch ON (do not start the engine). This light will be illuminated when the parking brake is applied with the ignition switch in the START or ON position.

Before driving, be sure the parking brake is fully released and the brake warning light is off.

If the brake warning light remains on after the parking brake is released while engine is running, there may be a malfunction in the brake system. Immediate attention is necessary.
Driving your vehicle

If at all possible, cease driving the vehicle immediately. If that is not possible, use extreme caution while operating the vehicle and only continue to drive the vehicle until you can reach a safe location or repair shop.

Electronic parking brake (EPB) (if equipped)

*NOTICE*

Applying the parking brake

To apply the EPB (electronic parking brake):

1. Depress the brake pedal.
2. Pull up the EPB switch.

Make sure the warning light comes on.

Also, the EPB is applied automatically if the Auto Hold button is on when the engine is turned off. However, if you keep pressing the EPB switch till the engine is turned off, the EPB will not be applied.

*CAUTION*

Do not operate the parking brake while the vehicle is moving except in an emergency situation. It could damage the vehicle system and endanger driving safety.
Driving your vehicle

Releasing the parking brake

To release the EPB (electronic parking brake), press the EPB switch in the following condition:

- Have the ignition switch or engine start/stop button in the ON position.
- Depress the brake pedal.

Make sure the brake warning light goes off.

To release EPB (electronic parking brake) automatically:

- Shift lever in P (Park)
  
  With the engine running depress the brake pedal and shift out of P (Park) to R (Rear) or D (Drive).
- Shift lever in N (Neutral)
  
  With the engine running depress the brake pedal and shift out of N (Neutral) to R (Rear) or D (Drive).

1. Start the engine.
2. Fasten the driver's seat belt.
3. Close the driver's door, engine hood and liftgate (tailgate).
4. Depress the accelerator pedal while the shift lever is in R (Rear), D (Drive) or manual shift mode.

Make sure the brake warning light goes off.

* NOTICE

- For your safety, you can engage the EPB even though the ignition switch or engine stop/start button is in the OFF position, but you cannot release it.
- For your safety, depress the brake pedal and release the parking brake manually with the EPB switch when you drive downhill or when backing up the vehicle.
Driving your vehicle

EPB (electronic parking brake) may be automatically applied when:
- The EPB is overheated
- Requested by other systems

**NOTICE**
If the driver turns the engine off by mistake while Auto Hold is operating, EPB will be automatically applied. (Vehicles equipped with Auto Hold)

**CAUTION**
- If the parking brake warning light is still on even though the EPB has been released, have the system checked by an authorized HYUNDAI dealer.
- Do not drive your vehicle with the EPB applied. It may cause excessive brake pad and brake rotor wear.

**System warning**

- If you try to drive off depressing the accelerator pedal with the EPB applied, but doesn't release automatically, a warning will sound and a message will appear.

If the above situation occurs, depress the brake pedal and release EPB by pressing the EPB switch.
Driving your vehicle

⚠️ WARNING

- To prevent unintentional movement when stopped and leaving the vehicle, do not use the shift lever in place of the parking brake. Set the parking brake and make sure the shift lever is securely positioned in P (Park).
- Never allow anyone who is unfamiliar with the vehicle to touch the parking brake. If the parking brake is released unintentionally, serious injury may occur.
- All vehicles should always have the parking brake fully engaged when parking to avoid inadvertent movement of the car which can injure occupants or pedestrians.

⚠️ CAUTION

- A click sound may be heard while operating or releasing the EPB, but these conditions are normal and indicate that the EPB is functioning properly.
- When leaving your keys with a parking lot attendant or valet, make sure to inform him/her how to operate the EPB.
- The EPB may malfunction if you drive with the EPB applied.
- When you automatically release EPB by depressing the accelerator pedal, depress it slowly.

⚠️ CAUTION

Depress the brake pedal when the above message appears for the Auto Hold and EPB may not activate.

System warning

- Type A

- Type B

When the conversion from Auto Hold to EPB is not working properly a warning will sound and a message will appear.

AUTO HOLD deactivating
Press brake pedal

ODM056039L/ODM056040L
Driving your vehicle

EPB malfunction indicator (if equipped)

• If the EPB is applied while Auto Hold is activated because of ESC (Electronic Stability Control) signal, a warning sound and a message will appear.
• If the driver’s door is opened and the seatbelt is not fastened while Auto Hold is opened, a warning will sound and a message will appear.

This warning light illuminates if the engine start/stop button is changed to the ON position and goes off in approximately 3 seconds if the system is operation normally.

If the EPB malfunction indicator remains on, comes on while driving, or does not come on when the ignition switch or the engine start/stop button is changed to the ON position, this indicates that the EPB may have malfunctioned.

If this occurs, have the system checked by an authorized HYUNDAI dealer.

The EPB malfunction indicator may illuminate when the ESC indicator comes on to indicate that the ESC is not working properly, but it does not indicate a malfunction of the EPB.
Driving your vehicle

Emergency braking
If there is a problem with the brake pedal while driving, emergency braking is possible by pulling up and holding the EPB switch. Braking is possible only while you are holding the EPB switch.

NOTICE
During emergency braking by the EPB, the parking brake warning light will illuminate to indicate that the system is operating.

CAUTION
If you continuously notice a noise or burning smell when the EPB is used for emergency braking, have the system checked by an authorized HYUNDAI dealer.

WARNING
Do not operate the parking brake while the vehicle is moving except in an emergency situation.

When the EPB (electronic parking brake) does not release
If the EPB does not release normally, contact an authorized HYUNDAI dealer by loading the vehicle on a flatbed tow truck and have the system checked.

CAUTION
• The EPB warning light may illuminate if the EPB switch operates abnormally. Shut the engine off and turn it on again after a few minutes. The warning light will go off and the EPB switch will operate normally. However, if the EPB warning light is still on, have the system checked by an authorized HYUNDAI dealer.
• If the parking brake warning light does not illuminate or blinks even though the EPB switch was pulled up, the EPB is not applied.
• If the parking brake warning light blinks when the EPB warning light is on, press the switch, then pull it up. Once more press it back to its original position and pull it back up. If the EPB warning does not go off, have the system checked by an authorized HYUNDAI dealer.
Driving your vehicle

AUTO HOLD (if equipped)
The Auto Hold helps maintain the vehicle in a standstill even though the brake pedal is not depressed after the driver brings the vehicle to a complete stop by depressing the brake pedal.

Set up

1. With the driver's door, engine hood and liftgate (tailgate) closed, fasten the driver's seat belt or depress the brake pedal and then press the Auto Hold button. The white AUTO HOLD indicator will come on and the system will be in the standby position.

2. When you stop the vehicle completely by depressing the brake pedal, the AUTO HOLD indicator changes from white to green.

3. The vehicle will remain stationary even if you release the brake pedal.

4. If EPB is applied, Auto Hold will be released.
Leaving
If you press the accelerator pedal with the shift lever in R (Reverse), D (Drive) or manual shift mode, the Auto Hold will be released automatically and the vehicle will start to move. The indicator changes from green to white.

**WARNING**
When driving off from Auto Hold by depressing the accelerator pedal, always check the surrounding area near your vehicle.
Slowly depress the accelerator pedal for a smooth take off.

**Cancel**
To cancel the Auto Hold operation, press the Auto Hold switch. The AUTO HOLD indicator will disappear.
To cancel the Auto Hold operation when the vehicle is at a standstill, press the Auto Hold switch while depressing the brake pedal.

**NOTICE**
- The Auto Hold does not operate when:
  - The driver's seat belt is unfastened and driver's door is opened
  - The engine hood is opened when the gear is in D [Drive]
  - The liftgate (tailgate) is opened when the gear is in R [Reverse]
  - The shift lever is in P (Park)
  - The EPB is applied
- For your safety, the Auto Hold automatically switches to EPB in such cases:
  - The driver's seat belt is unfastened and driver's door is opened
  - The engine hood is opened when the gear is in D [Drive]
  - The liftgate (tailgate) is opened when the gear is in R [Reverse]
  - The vehicle is in a standstill for more than 10 minutes
  - The vehicle is standing on a steep slope
  - The vehicle moved several times

(Continued)
(Continued)

In these cases, the brake warning light comes on, the AUTO HOLD indicator changes from green to white, and a warning sounds and a message will appear to inform you that EPB has been automatically engaged. Before driving off again, press foot brake pedal, check the surrounding area near your vehicle and release parking brake manually with the EPB switch.

• If the AUTO HOLD indicator lights up yellow, the Auto Hold is not working properly. Contact an authorized HYUNDAI dealer.
• While operating Auto Hold, you may hear mechanical noise. However, it is normal operating noise.

⚠️ WARNING
- Press the accelerator pedal slowly when you start the vehicle.
- For your safety, cancel the Auto Hold when you drive downhill or back up the vehicle.

⚠️ CAUTION
If there is a malfunction with the driver's door, engine hood or liftgate (tailgate) open detection system, the Auto Hold may not work properly.
Contact an authorized HYUNDAI dealer.
Anti-lock brake system (ABS)

**WARNING**
ABS (or ESC) will not prevent accidents due to improper or dangerous driving maneuvers. Even though vehicle control is improved during emergency braking, always maintain a safe distance between you and objects ahead. Vehicle speeds should always be reduced during extreme road conditions.

The braking distance for vehicles equipped with an anti-lock braking system or (Electronic Stability Control System) may be longer than for those without it in the following road conditions.

During these conditions the vehicle should be driven at reduced speeds:

(Continued)

- Rough, gravel or snow-covered roads.
- With tire chains installed.
- On roads where the road surface is pitted or has different surface height.

The safety features of an ABS (or ESC) equipped vehicle should not be tested by high speed driving or cornering. This could endanger the safety of yourself or others.

The ABS continuously senses the speed of the wheels. If the wheels are going to lock, the ABS system repeatedly modulates the hydraulic brake pressure to the wheels.

When you apply your brakes under conditions which may lock the wheels, you may hear a “tik-tik” sound from the brakes, or feel a corresponding sensation in the brake pedal. This is normal and it means your ABS is active.

In order to obtain the maximum benefit from your ABS in an emergency situation, do not attempt to modulate your brake pressure and do not try to pump your brakes. Press your brake pedal as hard as possible or as hard as the situation warrants and allow the ABS to control the force being delivered to the brakes.
**NOTICE**

A click sound may be heard in the engine compartment when the vehicle begins to move after the engine is started. These conditions are normal and indicate that the anti-lock brake system is functioning properly.

- Even with the anti-lock brake system, your vehicle still requires sufficient stopping distance. Always maintain a safe distance from the vehicle in front of you.
- Always slow down when cornering. The anti-lock brake system cannot prevent accidents resulting from excessive speeds.
- On loose or uneven road surfaces, operation of the anti-lock brake system may result in a longer stopping distance than for vehicles equipped with a conventional brake system.

**CAUTION**

- If the ABS warning light is on and stays on, you may have a problem with the ABS. In this case, however, your regular brakes will work normally.

(Continued)
NOTICE
When you jump start your vehicle because of a drained battery, the engine may not run as smoothly and the ABS warning light may turn on at the same time. This happens because of the low battery voltage. It does not mean your ABS is malfunctioning.
- Do not pump your brakes!
- Have the battery recharged before driving the vehicle.

CAUTION
- The ABS warning light will stay on for approximately 3 seconds after the ignition switch is ON. During that time, the ABS will go through self-diagnosis and the light will go off if everything is normal. If the light stays on, you may have a problem with your ABS. Contact an authorized HYUNDAI dealer as soon as possible.

(Continued)
- When you drive on a road having poor traction, such as an icy road, and operate your brakes continuously, the ABS will be active and the ABS warning light may illuminate. Pull your vehicle over to a safe place and stop the engine.
- Restart the engine. If the ABS warning light is off, then your ABS system is normal. Otherwise, you may have a problem with the ABS. Contact an authorized HYUNDAI dealer as soon as possible.
Driving your vehicle

Electronic stability control (ESC)

The Electronic Stability Control (ESC) system is designed to stabilize the vehicle during cornering maneuvers. ESC checks where you are steering and where the vehicle is actually going. ESC applies the brakes at individual wheels and intervenes in the engine management system to stabilize the vehicle.

**WARNING**

Never drive too fast for the road conditions or too quickly when cornering. Electronic stability control (ESC) will not prevent accidents. Excessive speed in turns, abrupt maneuvers and hydroplaning on wet surfaces can still result in serious accidents. Only a safe and attentive driver can prevent accidents by avoiding maneuvers that cause the vehicle to lose traction. Even with ESC installed, always follow all the normal precautions for driving - including driving at safe speeds for the conditions.

The Electronic Stability Control (ESC) system is an electronic system designed to help the driver maintain vehicle control under adverse conditions. It is not a substitute for safe driving practices. Factors including speed, road conditions and driver steering input can all affect whether ESC will be effective in preventing a loss of control. It is still your responsibility to drive and corner at reasonable speeds and to leave a sufficient margin of safety.

When you apply your brakes under conditions which may lock the wheels, you may hear a “tik-tik” sound from the brakes, or feel a corresponding sensation in the brake pedal. This is normal and it means your ESC is active.
NOTICE
A click sound may be heard in the engine compartment when the vehicle begins to move after the engine is started. These conditions are normal and indicate that the Electronic Stability Control System is functioning properly.

ESC operation
ESC ON condition
- When the ignition is turned ON, ESC and ESC OFF indicator lights illuminate for approximately 3 seconds, then ESC is turned on.
- Press the ESC OFF button for at least half a second after turning the ignition ON to turn ESC off. (ESC OFF indicator will illuminate). To turn the ESC on, press the ESC OFF button (ESC OFF indicator light will go off).
- When starting the engine, you may hear a slight ticking sound. This is the ESC performing an automatic system self-check and does not indicate a problem.

When operating
- When the ESC is in operation, the ESC indicator light blinks.
- When the Electronic Stability Control is operating properly, you can feel a slight pulsation in the vehicle. This is only the effect of brake control and indicates nothing unusual.
- When moving out of the mud or driving on a slippery road, pressing the accelerator pedal may not cause the engine rpm (revolutions per minute) to increase.
Driving your vehicle

ESC operation off
ESC OFF state

This car has 2 kinds of ESC off states.

If the engine stops when ESC is off, ESC remains off. Upon restarting the engine, the ESC will automatically turn on again.

• ESC off state 1
To cancel ESC operation, press the ESC OFF button (ESC OFF) shortly (ESC OFF indicator light (ESC OFF) illuminates). At this state, the engine control function does not operate. It means the traction control function does not operate. Brake control function only operates.

• ESC off state 2
To cancel ESC operation, press the ESC OFF button (ESC OFF) for more than 3 seconds. ESC OFF indicator light (ESC OFF) illuminates and ESC OFF warning chime will sound. At this state, the engine control function and brake control function do not operate. It means the car stability control function does not operate any more.

Indicator light

When ignition switch is turned to ON, the indicator light illuminates, then goes off if the ESC system is operating normally.
The ESC indicator light blinks whenever ESC is operating or illuminates when ESC fails to operate.
The ESC OFF indicator light comes on when the ESC is turned off with the button.
Driving your vehicle

**CAUTION**

Driving with varying tire or wheel sizes may cause the ESC system to malfunction. When replacing tires, make sure they are the same size as your original tires.

**WARNING**

The Electronic Stability Control system is only a driving aid; use precautions for safe driving by slowing down on curved, snowy, or icy roads. Drive slowly and don’t attempt to accelerate whenever the ESC indicator light is blinking, or when the road surface is slippery.

**ESC OFF usage**

When driving

- ESC should be turned on for daily driving whenever possible.
- To turn ESC off while driving, press the ESC OFF button while driving on a flat road surface.

**NOTICE**

- When operating the vehicle on a dynamometer, ensure that the ESC is turned off (ESC OFF light illuminated). If the ESC is left on, it may prevent the vehicle speed from increasing, and result in false diagnosis.
- Turning the ESC off does not affect ABS or brake system operation.

**WARNING**

Never press the ESC OFF button while ESC is operating (ESC indicator light blinks).

If ESC is turned off while ESC is operating, the vehicle may slip out of control.
Vehicle stability management (VSM) (if equipped)

This system provides further enhancements to vehicle stability and steering responses when a vehicle is driving on a slippery road or a vehicle detected changes in coefficient of friction between right wheels and left wheels when braking.

**VSM operation**

When the VSM is in operation, ESC indicator light (.isOn) blinks.

When the vehicle stability management is operating properly, you can feel a slight pulsation in the vehicle and/or abnormal steering responses (EPS). This is only the effect of brake and EPS control and indicates nothing unusual.

**The VSM does not operate when:**

- Driving on bank road such as gradient or incline
- Driving rearward
- ESC OFF indicator light (.isOn) remains on the instrument cluster
- EPS indicator light remains on the instrument cluster

**VSM operation off**

If you press the ESC OFF button to turn off the ESC, the VSM will also cancel and the ESC OFF indicator light (.isOn) illuminates.

To turn on the VSM, press the button again. The ESC OFF indicator light goes out.

**Malfunction indicator**

The VSM system will automatically be deactivated if a malfunction has been detected somewhere in the Electric Power Steering system or the VSM system. If a malfunction is detected, the ESC indicator light will illuminate and remain on. If the ESC indicator light (.isOn) or EPS warning light remains on, take your vehicle to an authorized HYUNDAI dealer and have the system checked.
**NOTICE**

- The VSM is designed to function above approximately 9 mph (15 km/h) on curves.
- The VSM is designed to function above approximately 18 mph (30 km/h) when a vehicle is braking on a split-mu road. The split-mu road is made of surfaces which have different friction forces.

**WARNING**

- The Vehicle Stability Management system is not a substitute for safe driving practices but a supplementary function only. It is the responsibility of the driver to always check the speed and the distance to the vehicle ahead. Always hold the steering wheel firmly while driving.
- Your vehicle is designed to operate according to the driver's input through steering, acceleration, and braking, even with the VSM operational. Always follow all the normal precautions for driving at safe speeds for the conditions - including driving in inclement weather and on a slippery road.
- Driving with varying tire or wheel sizes may cause the VSM system to malfunction. When replacing tires, make sure they are the same size as your original tires.

**Downhill brake control (DBC) (if equipped)**

The Downhill Brake Control (DBC) assists the driver when descending a steep hill without the driver depressing the brake pedal. It slows the vehicle to under approximately 6.3 mph (10 km/h) and lets the driver concentrate on steering the vehicle. DBC defaults to the OFF position whenever the ignition is turned on. The DBC can be turned on or off by pushing the button.
Driving your vehicle

**WARNING**

If the **DBC yellow indicator light** illuminates, the system has overheated or there is an operational problem. The DBC will not activate. If the DBC yellow indicator light illuminates even though the DBC system has cooled, have the system checked by an authorized HYUNDAI dealer.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Indicator light</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Standby</strong></td>
<td>Green light illuminated</td>
<td>Press the DBC button when the vehicle speed is under 25 mph (40 km/h). The DBC system will turn ON and enter the standby mode. The system maintains the standby mode when vehicle speed is under approximately 38 mph (60 km/h).</td>
</tr>
</tbody>
</table>
| **Activated**         | Green light blink        | In the standby mode, DBC will activate automatically under the following conditions:  
  • The incline is over a certain degree.  
  • The brake pedal or accelerator pedal is not depressed. |
| **OFF**               | Green light OFF          | The DBC will turn OFF under the following conditions:  
  • The DBC button is pressed again.  
  • The vehicle speed is over approximately 38 mph (60 km/h). |
| **Temporarily deativated** | Green light illuminated | In the activated mode, the DBC will temporarily deactivate under the following conditions:  
  • The hill is not steep enough.  
  • The brake pedal or accelerator pedal is depressed.  
  When the above conditions are gone, the DBC will automatically activate again. |
**NOTICE**

- The DBC does not turn ON in the P (Park) position.
- The DBC may not activate if the ESC (or ABS) is activated.
- Noise or vibration may occur from the brakes when the DBC is activated.
- The rear stop light comes on when the DBC is activated.
- Always turn OFF the DBC on normal roads. The DBC might activate from the standby mode during abrupt cornering or driving over speed bumps.

**WARNING**

- Unnecessary or unwanted DBC activation may result in an accident.
- On a very steep hill even though the brake pedal or accelerator pedal is depressed, the DBC may not deactivate.

### Hill-start assist control (HAC) (if equipped)

A vehicle has the tendency to roll back on a steep hill when the driver begins to accelerate after a stop. The Hill-start Assist Control (HAC) prevents the vehicle from rolling back by operating the brakes automatically for about 1.5 seconds. The brakes are released when the accelerator pedal is depressed or after about 1.5 seconds.

**WARNING**

The HAC is activated only for about 1.5 seconds, so always depress the accelerator pedal to begin accelerating after a stop.

**NOTICE**

- The HAC does not operate when the transaxle shift lever is in the P (Park) or N (Neutral) position.
- The HAC activates even though the ESC is off but it does not activate when the ESC has malfunctioned.
Driving your vehicle

Good braking practices

⚠️ WARNING
- Whenever you leave or park your vehicle, always set the parking brake as far as possible and fully engage the vehicle's transaxle into the P (Park) position. If the parking brake is not fully engaged, the vehicle may move inadvertently and injure yourself and others.
- All vehicles should always have the parking brake fully engaged when parking to avoid inadvertent movement of the vehicle which can injure occupants or pedestrians.

- After being parked, check to be sure the parking brake is not engaged and that the parking brake indicator light is out before driving away.
- Driving through water may get the brakes wet. They can also get wet when the vehicle is washed. Wet brakes can be dangerous! Your vehicle will not stop as quickly if the brakes are wet. Wet brakes may cause the vehicle to pull to one side. To dry the brakes, apply the brakes lightly until the braking action returns to normal, taking care to keep the vehicle under control at all times. If the braking action does not return to normal, stop as soon as it is safe to do so and call an authorized HYUNDAI dealer for assistance.
- Don't coast down hills with the vehicle out of gear. This is extremely hazardous. Keep the vehicle in gear at all times, use the brakes to slow down, then shift to a lower gear so that engine braking will help you maintain a safe speed.
- Don't "ride" the brake pedal. Resting your foot on the brake pedal while driving can be dangerous because it can result in the brakes overheating and losing their effectiveness. It also increases the wear of the brake components.
- If a tire goes flat while you are driving, apply the brakes gently and keep the vehicle pointed straight ahead while you slow down. When you are moving slowly enough for it to be safe to do so, pull off the road and stop in a safe place.
- If your vehicle is equipped with an automatic transaxle, don't let your vehicle creep forward. To avoid creeping forward, keep your foot firmly on the brake pedal when the vehicle is stopped.
- Use caution when parking on a hill. Firmly engage the parking brake and place the shift lever in P (automatic transaxle). If your vehicle is facing downhill, turn the front wheels into the curb to help keep the vehicle from rolling. If your vehicle is facing uphill, turn the front wheels away from the curb to help keep the vehicle from rolling. If there is no curb or if it is required by other conditions to keep the vehicle from rolling, block the wheels.

⚠️ WARNING
- Whenever you leave or park your vehicle, always set the parking brake as far as possible and fully engage the vehicle's transaxle into the P (Park) position. If the parking brake is not fully engaged, the vehicle may move inadvertently and injure yourself and others.
- All vehicles should always have the parking brake fully engaged when parking to avoid inadvertent movement of the vehicle which can injure occupants or pedestrians.
Under some conditions your parking brake can freeze in the engaged position. This is most likely to happen when there is an accumulation of snow or ice around or near the rear brakes or if the brakes are wet. If there is a risk that the parking brake may freeze, apply it only temporarily while you put the gear selector lever in P (automatic transaxle) and block the rear wheels so the vehicle cannot roll. Then release the parking brake.

Do not hold the vehicle on an incline with the accelerator pedal. This can cause the transaxle to overheat. Always use the brake pedal or parking brake.
Driving your vehicle

**AUTOMATIC EMERGENCY BRAKING (AEB) (IF EQUIPPED)**

The AEB system is to reduce or to avoid accident risk. It recognizes the distance from the vehicle ahead or the pedestrian through the sensors (i.e. radar and camera), and, if necessary, warns the driver of accident risk with the warning message or the warning alarms.

**WARNING**

Take the following precautions when using the Automatic Emergency Braking (AEB):

- This system is only a supplemental system and it is not intended to, nor does it replace the need for extreme care and attention of the driver. The sensing range and objects detectable by the sensors are limited. Pay attention to the road conditions at all times.
- NEVER drive too fast in accordance with the road conditions or while cornering.
- Always drive cautiously to prevent unexpected and sudden situations from occurring. AEB does not stop the vehicle completely and does not avoid collisions.

System setting and activation

**System setting**

The driver can activate the AEB by placing the ignition switch to the ON position and by selecting 'User Settings', 'Driving Assist', and 'AEB (Automatic Braking System)'. The AEB deactivates, when the driver cancels the system setting.
The warning light illuminates on the LCD display, when you cancel the AEB system. The driver can monitor the AEB ON/OFF status on the LCD display. When the warning light remains ON with the AEB activated, have the system checked by an authorized HYUNDAI dealer.

The driver can set the alarm speed to Early, Normal, or Late by placing the ignition switch to the ON position and by selecting 'User Settings', 'Driving Assist', 'FCW (Forward Collision Warning)', and 'Early / Normal / Late'.

- When the 'Early' speed is selected, the warning alarm promptly sounds upon getting the AEB signal. When it is too fast, select the 'Normal' speed.
- The 'Late' speed should be selected only in uncrowded traffic at a lower driving speed.

- Even though, you may feel that the fast alarming speed is still slow, when the vehicle in front abruptly stops.
The AEB can be successfully activated

When the AEB is selected on the LCD display, and when the following prerequisites are satisfied.
- The ESC (and TCS) is activated.
- Driving speed exceeds approximately 6mph (10km/h). (The AEB is only activated within a certain speed range.)
- The system detects a pedestrian or a vehicle in front, which may collide with your vehicle. (The AEB may not be activated or may sound a warning alarm in accordance with the driving situation or vehicle condition.)

AEB warning message and system control

The AEB produces warning messages and warning alarms in accordance with the collision risk levels. Also, it controls the brakes in accordance with the collision risk levels.

WARNING

- The driver can either activate or deactivate the AEB by selecting 'User Settings', 'Driving Assist' and enabling/disabling the feature.
  However, for your safety, operate the AEB after parking the vehicle on a safe location.
- The AEB automatically activates upon placing the ignition switch to the ON position.
  The driver can deactivate the AEB by canceling the system setting on the LCD display.
- The AEB automatically deactivates upon canceling the ESC. When the ESC is canceled, the AEB cannot be activated on the LCD display.
**Forward Warning (1st warning)**

The warning message appears on the LCD display with the warning alarms.

**Collision Warning (2nd warning)**

- This warning message appears on the LCD display with a warning chime.
- The AEB system provides additional braking power to the brakes to preemptively mitigate impact damage in a collision.

**Emergency braking (3rd warning)**

- This warning message appears on the LCD display with a warning alarm.
- The AEB system provides additional braking power to the brakes to preemptively mitigate impact damage in a collision.
- The brake control is maximized just before a collision.
**Brake operation**

- In an urgent situation, the braking system enters into the ready status for prompt reaction against the driver's depressing the brake pedal.
- The AEB provides additional braking power for optimum braking performance, when the driver depresses the brake pedal.
- The braking control is automatically deactivated, when the driver sharply depresses the brake pedal, or when the driver abruptly operates the steering wheel.
- The braking control is automatically canceled, when risk factors disappear.

---

⚠️ **CAUTION**

The driver should always exercise caution to vehicle operation, even when there is no warning message or warning alarm.

---

⚠️ **WARNING**

The AEB operates in accordance with the risk levels detected, such as the distance from the vehicle/passer-by in front, the speed of the vehicle/passer-by in front, and the driver's vehicle operation.

⚠️ **WARNING**

The braking control cannot completely stop the vehicle nor avoid all collisions. The driver should hold the responsibility to safely drive and control the vehicle.
Sensor to detect the distance from the vehicle in front (front radar)

This sensor is designed to help maintain a certain distance from the vehicle in front. However, a smudged sensor lens with foreign substances, such as snow and rain, adversely affects the sensing performance. It may even temporarily cancel the AEB. Always keep the sensor lens clean.

Warning message and warning light

When the sensor cover or the sensor lens is obscured by foreign substances, such as snow or rain, the AEB operation may temporarily stop. In this case, a warning message will appear to notify the driver. This is not a malfunction with the AEB. To operate the AEB again, remove the foreign substances.

* NOTICE

- Do not install any accessories, such as a license plate bracket or bumper sticker near the sensor area. Do not replace the bumper by yourself. Doing so may adversely affect the sensing performance.
- Always keep the sensor/bumper area clean.
- Use only a soft cloth to wash the vehicle. Also, do not spray highly pressurized water on the sensor installed on the bumper.
- Be careful not to apply unnecessary force on the frontal sensor area. When the sensor moves out of the correct position due to external force, the system may not operate correctly even without the warning light or message. In this case, have the vehicle inspected by an authorized HYUNDAI dealer.
- Use only the genuine HYUNDAI sensor cover. Do not apply paint on the sensor cover.
System malfunction

- When the AEB is not working properly, the AEB warning light (💡) will illuminate and the warning message will appear for a few seconds. After the message disappears, the master warning light (⚠️) will illuminate. In this occurs, have the vehicle inspected by an authorized HYUNDAI dealer.
- The AEB warning message may appear along with the illumination of the ESC warning light.

⚠️ WARNING

- The AEB is only a supplemental system for the driver's convenience. The driver still maintains responsibility to control the vehicle. Do not solely depend on the AEB system. Rather, maintain a safe braking distance, and, if necessary, depress the brake pedal to lower the driving speed.
- The AEB may unnecessarily produce warning messages and warning alarms. Due to sensor limitations, the AEB may not produce warning messages or the warning alarm at all.
- When there is a malfunction with the AEB, the braking control does not operate upon detecting a collision risk even with other braking systems normally operating.

(Continued)

- The AEB operates only for the vehicle / pedestrian in front, while driving forward. It does not operate for any animals or vehicles in the opposite direction.
- The AEB can not recognize the side-profile of vehicles, such as in the case of cross-traffic at an intersection, or a vehicle pulling out of a driveway.
Limitations of the system
The AEB monitors driving conditions through the radar and the camera sensor. For any vehicle activity occurring outside the sensor's range and field of view, the AEB may not be able to react. The driver should exercise caution in the following situations, as the AEB operation may be limited:

Recognizing vehicles
- The radar or the camera is obscured by foreign substances.
- In heavy rain or snow
- There is electromagnetic interference.
- The object in front deflects the radar beam due to extreme angles or an extremely irregular surface.
- The vehicle in front has a narrow body. (i.e. motor cycle and bicycle)
- The system cannot identify objects in front due to driving into the at dusk/dawn, bright reflections, or darkness.
- The camera cannot fit the full outline of a vehicle in front.
- The vehicle in front has cargo extending beyond the back of the vehicle or has a high ground clearance.
- The vehicle in front does not turn ON the rear lights, does not have rear lights, has asymmetric rear lights, or has rear lights out of angle.
- The outside brightness changes suddenly, such as entering/exiting a tunnel.
- Vehicle driving is erratic.
- The radar/camera sensor recognition is limited.
- Driving on a curve
The AEB performance decreases while driving on a curve. The AEB may not recognize vehicles in front that are in the same lane. It may unnecessarily produce the warning message and the warning alarm for vehicles in a different lane, or it may not produce the warning message and the warning alarm at all.
While driving on a curve, exercise caution, and, if necessary, depress the brake pedal.
Driving your vehicle

While driving on a curve, the AEB may recognize a vehicle in front the next lane over. Exercise caution, and, if necessary, depress the brake pedal.

Or, depress the accelerator pedal to maintain the driving speed. Always, monitor surrounding traffic for your safety.

- Driving on a slope
  The AEB performance decreases while driving up or down a slope due to not recognizing vehicles in front in the same lane until much closer. It may unnecessarily produce the warning message and the warning alarm, or it may not produce the warning message and the warning alarm at all.

  When the AEB suddenly recognizes the vehicle in front while passing over a slope, you may experience sharp deceleration.

  Always keep your eyes forward while driving up or down a slope, and, if necessary, depress the brake pedal.

- Changing lanes
  When vehicle in the next lane over merges into your lane, the AEB may not recognize it until it has completely crossed into your lane.

  When the vehicle in the next lane changes lanes suddenly, it is more likely not to be recognized. Always exercise caution.
When a vehicle in front moves out of the lane to avoid a stopped vehicle further ahead, the AEB may not detect the stopped vehicle ahead. Always exercise caution.

Recognizing pedestrians
- The pedestrian is not completely within the range of the camera sensor or the pedestrian is not in a typical upright walking posture.
- The pedestrian moves very fast.
- The pedestrian suddenly crosses in front.
- The pedestrian wears clothes that are difficult to distinguish from the background.
- It is too bright or too dark outside.
- The vehicle drives at night or in the darkness.
- There are items that resemble a person's silhouette.
- The pedestrian silhouette is small.
- The pedestrian is using a mobility assistance device.
- It is difficult to distinguish the pedestrian from the surroundings.
- The sensor recognition is limited.
- There is a group of pedestrians.
Driving your vehicle

⚠️ WARNING

- Cancel the AEB in the User Settings on the LCD before towing another vehicle. While towing, the brake application may adversely affect your vehicle safety.
- Exercise caution when there is a vehicle in front that has cargo extending beyond the back of the vehicle or has a high ground clearance.
- The sensor only detects standing or walking pedestrians, not carts, bicycles, motorcycles, luggage bags, or strollers.
- The AEB is not guaranteed to work in every possible situation. Never test the AEB against a person or an object. It may cause severe injuries or death.

✽ NOTICE

In some instances, the AEB system may be cancelled when subjected to electromagnetic interference.

This device complies with Part 15 of the FCC rules.

Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.
Cruise indicator
2. Cruise set indicator

The cruise control system allows you to program the vehicle to maintain a constant speed without depressing the accelerator pedal. This system is designed to function above approximately 25 mph (40 km/h).

**WARNING**
- If the cruise control is left on, (CRUISE indicator light in the instrument cluster is illuminated), the cruise control can be switched on accidentally. Keep the cruise control system off (CRUISE indicator light OFF) when the cruise control is not in use, to avoid inadvertently setting a speed.
- Use the cruise control system only when driving on open highways in good weather.
- Do not use the cruise control when it may not be safe to keep the vehicle at a constant speed, for instance, driving in heavy or varying traffic, or on slippery (rainy, icy or snow-covered) or winding roads or over 6% up-hill or down-hill roads.

(Continued)

(Continued)
- Pay particular attention to the driving conditions whenever using the cruise control system.
- Be careful when driving downhill using the cruise control system, which may increase the vehicle speed.
Driving your vehicle

**NOTICE**

- During normal cruise control operation, when the SET switch is activated or reactivated after applying the brakes, the cruise control will energize after approximately 3 seconds. This delay is normal.
- To activate cruise control, depress the brake pedal at least once after turning the ignition switch to the ON position or starting the engine. This is to check if the brake switch which is important part to cancel cruise control is in normal condition.

**Cruise control switch**

- **CRUISE**: Turns cruise control system on or off.
- **CANCEL**: Cancels cruise control operation.
- **RES+**: Resumes or increases cruise control speed.
- **SET-**: Sets or decreases cruise control speed.

**To set cruise control speed:**

1. Press the CRUISE button on the steering wheel to turn the system on. The CRUISE indicator light in the instrument cluster will illuminate.
2. Accelerate to the desired speed, which must be more than 25 mph (40 km/h).
3. Move the toggle switch down (to SET-), and release it at the desired speed. The SET indicator light in the instrument cluster will illuminate. Release the accelerator pedal at the same time. The desired speed will automatically be maintained.

*On a steep grade, the vehicle may slow down or speed up slightly while going uphill or downhill.*

**To increase cruise control set speed:**

Follow either of these procedures:
- Move the toggle switch up (to RES+) and hold it. Your vehicle will accelerate. Release the toggle switch at the speed you want.
- Move the toggle switch up (to RES+) and release it immediately. The cruising speed will increase by 1 mph (1 km/h) each time you move the toggle switch up (to RES+) in this manner.

**To decrease the cruising speed:**

Follow either of these procedures:
- Move the toggle switch down (to SET-) and hold it. Your vehicle will gradually slow down. Release the toggle switch at the speed you want to maintain.
- Move the toggle switch down (to SET-) and release it immediately. The cruising speed will decrease by 1 mph (1 km/h) each time you move the toggle switch down (to SET-) in this manner.
To temporarily accelerate with the cruise control on:
If you want to speed up temporarily when the cruise control is on, depress the accelerator pedal. Increased speed will not interfere with cruise control operation or change the set speed.
To return to the set speed, take your foot off the accelerator pedal.

To cancel cruise control, do one of the following:

- Depress the brake pedal.
- Shift into N (Neutral) with an automatic transaxle.
- Press the CANCEL switch located on the steering wheel.
- Decrease the vehicle speed lower than the memory speed by 9 mph (15 km/h).
- Decrease the vehicle speed to less than approximately 25 mph (40 km/h).

Each of these actions will cancel cruise control operation (the SET indicator light in the instrument cluster will go off), but it will not turn the system off. If you wish to resume cruise control operation, move up the toggle switch (to RES+) located on your steering wheel. You will return to your previously preset speed.
To resume cruising speed at more than approximately 25 mph (40 km/h):

If any method other than the CRUISE button was used to cancel cruising speed and the system is still activated, the most recent set speed will automatically resume when you move the toggle switch up (to RES+). It will not resume, however, if the vehicle speed has dropped below approximately 25 mph (40 km/h).

*NOTICE*
Always check the road conditions when you move the toggle switch up (to RES+) to resume the speed.

To turn cruise control off, do one of the following:

- Press the CRUISE button (the CRUISE indicator light in the instrument cluster will go off).
- Turn the ignition off.

Both of these actions cancel cruise control operation. If you want to resume cruise control operation, repeat the steps provided in “To set cruise control speed” on the previous page.
Driving your vehicle

ADVANCED SMART CRUISE CONTROL SYSTEM (IF EQUIPPED)

The Smart Cruise Control System allows you to program the vehicle to maintain a set speed so long as it is not limited by traffic. When traffic is encountered the vehicle will slow down to maintain a set distance behind traffic without depressing the accelerator or brake pedal.

⚠️ WARNING
For your safety, please read the owner's manual before using the Smart Cruise Control system.

⚠️ WARNING
The Smart Cruise Control System is not a substitute for safe driving practices, but a convenience function only. It is the responsibility of the driver to always check the speed and distance to the vehicle ahead.

⚠️ WARNING
Take the following precautions:
- If the Smart Cruise Control is left on, (CRUISE indicator light in the instrument cluster is illuminated) the Smart Cruise Control can be activated unintentionally. Keep the Smart Cruise Control System off (CRUISE indicator light OFF) when the Smart Cruise Control is not in use, to avoid inadvertently setting a speed.
- Use the Smart Cruise Control System only when traveling on open highways in good weather.
- Do not use the Smart Cruise Control when it may not be safe to keep the vehicle at a constant speed:
  - When driving in heavy traffic or when traffic conditions make it difficult to drive at a constant speed.

(Continued)
To Adjust the Sensitivity of Smart Cruise Control

The sensitivity of vehicle speed when following the front vehicle to maintain the set distance can be adjusted. Go to the User Settings Mode (Driving Assist) and select SCC (Smart Cruise Control). You may select one of the three stages you prefer.

- Slow:
  Vehicle speed following the front vehicle to maintain the set distance is slower than normal speed.

- Normal:
  Vehicle speed following the front vehicle to maintain the set distance is normal.

- Fast:
  Vehicle speed following the front vehicle to maintain the set distance is faster than normal speed.

(Continued)
- When driving on rainy, icy, or snow-covered roads
- When driving on hilly or windy roads
- When driving in windy areas
- When driving in parking lots
- When driving near crash barriers
- When driving on a sharp curve
- When driving with limited view (possibly due to bad weather, such as fog, snow, rain or sandstorm)
Driving your vehicle

To convert to Cruise Control mode

The driver may choose to only use the Cruise Control mode (speed control function) by doing as follows:

1. Turn the Smart Cruise Control System on (the cruise indicator light will be on but the system will not be activated).
2. Push and hold the Vehicle-to-Vehicle Distance button for more than 2 seconds.
3. Choose between "Smart Cruise Control (SCC) mode" and "Cruise Control (CC) mode".

When the system is canceled using the CRUISE button or the CRUISE button is used after the engine is turned on, the SCC mode will turn on.

Smart Cruise Control speed

To set Smart Cruise Control speed

1. Push the CRUISE button on the steering wheel to turn the system on. The CRUISE indicator will illuminate.
2. Accelerate to the desired speed.

The Smart Cruise Control speed can be set as follows:

- About 20 mph (30 km/h)~110 mph (180 km/h): when there is no vehicle in front
- 0 mph (0 km/h)~110 mph (180 km/h): when there is a vehicle in front

WARNING

When using the Cruise Control mode, you must manually adjust the distance to other vehicles by depressing the accelerator or brake pedal. The system does not automatically adjust the distance to vehicles in front of you.
Driving your vehicle

3. Push the toggle switch down (SET-), and release it at the desired speed.
   The Set Speed and Vehicle-to-Vehicle Distance on the LCD display will illuminate.

4. Release the accelerator pedal.
   The desired speed will automatically be maintained.
   If there is a vehicle in front of you, the speed may decrease to maintain the distance to the vehicle ahead.
   On a steep grade, the vehicle may slow down or speed up slightly while going uphill or downhill.

To increase Smart Cruise Control set speed

Follow either of these procedures:
• Push the toggle switch up (RES+), and hold it. Your vehicle set speed will increase by 5 mph (10 km/h). Release the toggle switch at the speed you want.
• Push the toggle switch up (RES+), and release it immediately. The cruising speed will increase by 1 mph (1 km/h) each time you move the toggle switch up in this manner.
• You can set the speed up to 110 mph (180 km/h).

To decrease the Smart Cruise Control set speed

Follow either of these procedures:
• Push the toggle switch down (SET-), and hold it. Your vehicle set speed will decrease by 5 mph (10 km/h). Release the toggle switch at the speed you want.
• Push the toggle switch down (SET-), and release it immediately. The cruising speed will decrease by 1 mph (1 km/h) each time you move the toggle switch down in this manner.
• You can set the speed to 20 mph (30 km/h).
Driving your vehicle

**To temporarily accelerate with the Smart Cruise Control on**

If you want to speed up temporarily when the Smart Cruise Control is on, depress the accelerator pedal. Increased speed will not interfere with Smart Cruise Control operation or change the set speed.

To return to the set speed, take your foot off the accelerator.

If you push the toggle switch down (SET-) at increased speed, the cruising speed will be set again.

**NOTICE**

Be careful when accelerating temporarily, because the speed is not controlled automatically at this time even if there is a vehicle in front of you.

**Smart Cruise Control will be temporarily canceled when:**

- The brake pedal is depressed.
- CANCEL button located on the steering wheel is depressed.
- The CANCEL button is depressed when the vehicle is at a standstill.

The Advanced Smart Cruise Control turns off temporarily when the indicator on the LCD display turns off. The CRUISE indicator is illuminated continuously.

The smart cruise control system will be canceled automatically when:

- The driver's door is opened.
- The shift lever is shifted to N (Neutral), R (Reverse) or P (Park).
- The EPB (Electronic Parking Brake) is applied.
- The vehicle speed is over 120 mph (190 km/h).
- The vehicle stops on a steep incline.
- The ESC, TCS or ABS is operating.
- The ESC or TCS is turned off.
- The AEB is activated.
- The sensor or the cover is dirty or blocked with foreign matter.
- When the vehicle is stopped for more than 5 minutes.
- The vehicle stops and goes repeatedly for a long period of time.
- The driver starts driving by pushing the toggle switch up (RES +) or down (SET -), approximately 3 seconds after the vehicle is stopped by the Smart Cruise Control System with no other vehicle ahead.
Driving your vehicle

- The driver starts driving by pushing a toggle switch up (RES +) or down (SET -), after stopping the vehicle with a vehicle stopped far away in front.
- The accelerator pedal is continuously depressed for more than one minute.

Each of these actions will cancel the Smart Cruise Control operation. (Operation on the Set Speed and Vehicle-to-Vehicle Distance on the LCD display will go off.)

In a condition where the Smart Cruise Control is cancelled automatically, the Smart Cruise Control will not resume even when the RES+ or SET- toggle switch is pushed. Also, the EPB will be applied when the vehicle is stopped.

**NOTICE**

If the Smart Cruise Control is cancelled by other than the reasons mentioned, have the system checked by an authorized HYUNDAI dealer.

---

**To resume Smart Cruise Control set speed**

If the system is cancelled, the warning chime will sound and a message will appear for a few seconds.

You must adjust the vehicle speed by depressing the accelerator or brake pedal according to the road condition ahead and driving condition.

Always check the road conditions. Do not rely on the warning chime.

If any method other than the CRUISE toggle switch was used to cancel cruising speed and the system is still activated, the cruising speed will automatically resume when you push the toggle switch up (RES+) or down (SET-).

If you push the toggle switch up (RES+), the speed will resume to the recently set speed. However, if vehicle speed has dropped below approximately 20 mph (30 km/h), it will resume when there is a vehicle in front of your vehicle.
Driving your vehicle

**NOTICE**
Always check the road conditions when you push the toggle switch up (RES+) to resume speed.

**To turn Cruise Control off**
Push the CRUISE button (the CRUISE indicator light will go off).

**Smart Cruise Control Vehicle-to-Vehicle Distance**
*To set Vehicle-to-Vehicle Distance*
When the Smart Cruise Control System is ON, you can set and maintain the distance from the vehicle ahead of you without pressing the accelerator or brake pedal.
Each time the button is pressed, the vehicle to vehicle distance changes as follows:

Distance 4 ➔ Distance 3 ➔ Distance 2

Distance 1

For example, if you drive at 56 mph (90 km/h), the distance maintain as follows:

Distance 4 - approximately 172 feet (52.5 m)
Distance 3 - approximately 130 feet (40 m)
Distance 2 - approximately 106 feet (32.5 m)
Distance 1 - approximately 82 feet (25 m)

**NOTICE**
Distance 4 is always set when the system is used for the first time after starting the engine.

*When the lane ahead is clear:*

The vehicle speed will maintain the set speed.

*When there is a vehicle ahead of you in your lane:*

- Your vehicle speed will slow down or speed up to maintain the selected distance (A vehicle will appear in front of your vehicle in the LCD display only when there is an actual vehicle in front of you.).
If the vehicle ahead speeds up, your vehicle will travel at a steady cruising speed after accelerating to the set speed.

**WARNING**

When using the Smart Cruise Control System:
- The warning chime sounds and the Vehicle-to Vehicle Distance indicator blinks if the vehicle is unable to maintain the selected distance from the vehicle ahead.
- If the warning chime sounds, depress the accelerator or brake pedal to actively adjust the vehicle speed, and the distance to the vehicle ahead.
- Even if the warning chime is not activated, always pay attention to the driving conditions to prevent dangerous situations from occurring.

**CAUTION**

- If the vehicle ahead (vehicle speed less than 20 mph (30km/h)) moves to the next lane, the warning chime will sound and a message will appear. Adjust your vehicle speed for vehicles or objects that can suddenly appear in front of you by depressing the brake pedal.
- Always pay attention to the road condition ahead.
In traffic situation

- In traffic, your vehicle will stop if the vehicle ahead of you stops. Also, if the vehicle ahead of you starts moving, your vehicle will start as well. However, if the vehicle stops for more than 3 seconds, you must depress the accelerator pedal or push up the toggle switch (RES+) to start driving.

- If you push the advanced smart cruise control toggle switch (RES+ or SET-) while Auto Hold and advanced smart cruise control is operating (The green AUTO HOLD indicator), Auto Hold will be released regardless of accelerator pedal operation and the vehicle will start to move.

Sensor to detect distance to the vehicle ahead

The Smart Cruise Control uses a sensor to detect distance to the vehicle ahead.

If the sensor is covered with dirt or other foreign matter, the vehicle to vehicle distance control may not operate correctly.

Always keep the area in front of the sensor clean.
**Sensor warning message**

If the sensor or cover is dirty or obscured with foreign material such as snow, this message will appear. In this case, the system may not function temporarily, but it does not indicate a malfunction of the Smart Cruise Control System. Clean the sensor or cover by using a clean soft cloth.

**SCC (Smart Cruise Control) malfunction message**

The message will appear when the vehicle to vehicle distance control system is not functioning normally. Take your vehicle to an authorized HYUNDAI dealer and have the system checked.

**CAUTION**

- Do not install accessories around the sensor and do not replace the bumper by yourself. It may interfere with the sensor performance.
- Always keep the sensor and bumper clean.
- To prevent sensor cover damage from occurring, wash the car with a clean soft cloth.
- Do not paint the sensor cover.
- Do not damage the sensor or sensor area by a strong impact. If the sensor moves slightly off position, the Smart Cruise Control System will not operate correctly. If this occurs, have the system checked by an authorized HYUNDAI dealer.
- Use only a genuine HYUNDAI sensor cover for your vehicle.
Limitations of the system

The Smart Cruise Control System may have limits to its ability to detect distance to the vehicle ahead due to road and traffic conditions.

- On curves

  - The Smart Cruise Control System may not detect a moving vehicle in your lane, and then your vehicle could accelerate to the original set speed. Also, the vehicle speed will decrease when the vehicle ahead is recognized suddenly.
  
  - Select the appropriate set speed on curves and apply the brakes or accelerator pedal if necessary.

Your vehicle speed can be reduced due to a vehicle in the adjacent lane. Apply the accelerator pedal and select the appropriate set speed. Check to be sure that the road conditions permit safe operation of the Smart Cruise Control.
Driving your vehicle

On inclines

- During uphill or downhill driving, the Smart Cruise Control System may not detect a moving vehicle in your lane, and cause your vehicle to accelerate to the original set speed. Also, the vehicle speed will rapidly decrease when the vehicle ahead is recognized suddenly.
- Select the appropriate set speed on inclines and apply the brake or accelerator pedal if necessary.

Lane changing

- A vehicle which moves into your lane from an adjacent lane cannot be recognized by the sensor until it is in the sensor's detection range.
- The sensor may not detect immediately when a vehicle cuts in suddenly. Always pay attention to the traffic, road and driving conditions.
- If a slower vehicle moves into your lane, your speed may decrease to maintain the distance to the vehicle ahead.
- If a faster vehicle which moves into your lane, your vehicle will accelerate to the set speed.

Vehicle recognition

- Some vehicles in your lane cannot be recognized by the sensor such as:
  - Narrow vehicles such as motorcycles or bicycles
  - Vehicles offset to one side
  - Slow-moving vehicles or suddenly decelerating vehicles
  - Stopped vehicles
  - Vehicles with small rear profile such as trailers with no loads
A vehicle ahead cannot be recognized correctly by the sensor if any of following occurs:
- When the vehicle is pointing upwards due to overloading in the trunk
- While the steering wheel is operating
- When driving to one side of the lane
- When driving on narrow lanes or on curves

Apply the brake or accelerator pedal if necessary.

- Your vehicle may accelerate when a vehicle ahead of you disappears.
- When you are warned that the vehicle ahead of you is not detected, drive with caution.
- When vehicles are at a standstill and the vehicle in front of you changes to the next lane, be careful when your vehicle starts to move because it may not recognize the stopped vehicle in front of you.
Driving your vehicle

- Always look out for pedestrians when your vehicle is maintaining a distance with the vehicle ahead.
- Always be cautious for vehicles with higher height or vehicles carrying loads that sticks out from the back of the vehicle.

**WARNING**

When using the Smart Cruise Control take the following precautions:

- If an emergency stop is necessary, you must apply the brakes. The vehicle cannot be stopped at every emergency situation by using the Smart Cruise Control System.
- Keep a safe distance according to road conditions and vehicle speed. If the vehicle to vehicle distance is too close during a high-speed driving, a serious collision may result.
- Always maintain sufficient braking distance and decelerate your vehicle by applying the brakes if necessary.

(Continued)
Driving your vehicle

(Continued)

- The Smart Cruise Control System cannot recognize a stopped vehicle, pedestrians or an oncoming vehicle. Always look ahead cautiously to prevent unexpected and sudden situations from occurring.

- Vehicles moving in front of you with a frequent lane change may cause a delay in the system's reaction or may cause the system to react to a vehicle actually in an adjacent lane. Always drive cautiously to prevent unexpected and sudden situations from occurring.

- Always be aware of the selected speed and vehicle to vehicle distance.

(Continued)

- The Smart Cruise Control System may not recognize complex driving situations so always pay attention to driving conditions and control your vehicle speed.

⚠️ CAUTION

The Smart Cruise Control System may not operate temporarily due to:

- Electrical interference
- Modifying the suspension
- Differences of tire abrasion or tire pressure
- Installing different type of tires

(Continued)

This device complies with Part 15 of the FCC rules.

Operation is subject to the following three conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.
3. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the device.
Driving your vehicle

**BLIND SPOT DETECTION SYSTEM (BSD) (IF EQUIPPED)**

1. **BSD (Blind Spot Detection)**
   The blind spot detection range varies relative to vehicle speed. Note that if your vehicle is traveling much faster than the vehicles around you, the warning will not occur.

2. **LCA (Lane Change Assist)**
   The Lane Change Assist feature will alert you when a vehicle is approaching in an adjacent lane at a high rate of speed. If the driver activates the turn signal when the system detects an oncoming vehicle, the system sounds an audible alert.

3. **RCTA (Rear Cross Traffic Alert)**
   The Rear Cross Traffic Alert feature monitors approaching cross traffic from the left and right side of the vehicle when your vehicle is moving in reverse. The feature will operate when the vehicle is moving in reverse below about 6 mph (10 km/h). If oncoming cross traffic is detected, a warning chime will sound.

**WARNING**

- Always check the road condition while driving for unexpected situations even though the Blind Spot Detection System (BSD) is operating.
- The Blind Spot Detection System (BSD) is a supplemental system to assist you. Do not entirely rely on the system. Always pay attention, while driving, for your safety.
- The Blind Spot Detection System (BSD) is not a substitute for proper and safe driving. Always drive safely and use caution when changing lanes or backing the vehicle up. The Blind Spot Detection System (BSD) may not detect every object alongside the vehicle.
Driving your vehicle

**BSD (Blind Spot Detection) / LCA (Lane Change Assist) (if equipped)**

**Operating conditions**

To operate:
Press the BSD(LCA) switch with the ignition switch in the ON position. The indicator illuminates on the switch. If vehicle speed exceeds 20 mph (30 km/h) the system will activate.

To cancel:
Press the BSD(LCA) switch again. The indicator on the switch will go off. When the system is not used, turn the system off by turning off the switch.

**NOTICE**

- If the engine is turned off then on again, the BSD system returns to the previous state.
- When the system is turned on, the warning light will illuminate for 3 seconds on the side view mirror.

**Warning type**

The system will activate when:
1. The system is on.
2. The vehicle speed is above about 20 mph (30 km/h).
3. Vehicles behind are detected.
First stage alert
If a vehicle is detected within the boundary of the system, a warning light will illuminate on the side view mirror.
If the detected vehicle is not in warning range, the warning will turn off according to driving conditions.

Second stage alert
The second stage alarm will activate when:
1. The first stage alert is on.
2. The turn signal light is on to change a lane.
When the second stage alert is activated, a warning light will blink on the side view mirror and an alarm will sound.
If you turn off the turn signal light, the second stage alert will be deactivated.

- The second stage alarm may be deactivated.
- To activate the alarm:
  Go to the User Settings Mode → Sound and select "BSD" on the LCD display.
- To deactivate the alarm:
  Go to the User Settings Mode → Sound and deselect "BSD" on the LCD display.

* NOTICE
The alarm function helps alert the driver. Deactivate this function only when it is necessary.
Detecting sensor

The sensors are located inside the rear bumper. Always keep the rear bumper clean for proper operation of the system.

Warning message

- This warning message may appear when:
  - There are foreign substances on the rear bumper.
  - A trailer or carrier is installed.
  - Driving in rural areas with little traffic or open terrains such as wide expanse of desert.
  - There is heavy snow or rain.

The light on the switch and the system will turn off automatically.

When the message is displayed due to a foreign substance, remove the foreign substance on the rear bumper. After the foreign substance is removed, if you drive for approximately 10 minutes, the system will work normally.

If the system does not operate normally after removing the substance or is not in a situation mentioned above, take your vehicle to an authorized HYUNDAI dealer and have the system checked.
Driving your vehicle

If there is a problem with the BSD system, a warning message will appear and the light on the switch will turn off. The system will turn off automatically. You have your vehicle inspected by an authorized HYUNDAI dealer.

RCTA (Rear Cross Traffic Alert)
When your vehicle starts to move backwards after parking, the sensor detects any approaching vehicles from the left and right sides and warns the driver.

Operating conditions
To operate:
Go to the User Settings mode (Driving Assist) and select Rear Cross Traffic Alert on the LCD display (For more details, refer to "LCD Display" in chapter 4.). The system will turn on and standby to activate. The system will activate when vehicle speed is below 7 mph (10 km/h) with the shift lever in R (Reverse).

*N NOTICE
The RCTA (Rear Cross Traffic Alert) detecting range is about 1 ft ~ 65 ft (0.5 m ~ 20 m). A vehicle will be detected if the vehicle speed is 2.5 mph ~ 22 mph (4 km/h ~ 36 km/h) within the detecting range. However, the detecting range may change under different conditions. Always pay attention to the surroundings.
If the vehicle detected by the sensors approaches your vehicle, the warning chime will sound, the warning light on the side view mirror will blink and a message will appear on the LCD display.

**NOTICE**

- If the detected vehicle is out of the sensing range of your vehicle, move the vehicle away from the detected object slowly; the warning will be cancelled.
- The system may not operate properly due to other factors or circumstances. Always pay attention to your surrounding.
- If your vehicle's left or right side bumper is blinded by barrier or vehicles, the system sensing ability may be reduced.

**WARNING**

- The warning light on the side view mirror will illuminate whenever a vehicle is detected at the rear side by the system.
- To avoid accidents, do not focus only on the warning light and neglect to see the surrounding of the vehicle.
- Drive safely even though the vehicle is equipped with a Blind Spot Detection System (BSD) and Rear Cross Traffic Alert (RCTA). Do not solely rely on the system but check your surrounding before changing lanes or backing the vehicle up.
- The system may not alert the driver in some conditions so always check the surroundings while driving.

(Continued)
Driving your vehicle

(CONTINUED)

- The Blind Spot Detection System (BSD) and Rear Cross Traffic Alert (RCTA) are not a substitute for proper and safe driving practices. Always drive safely and use caution when changing lanes or backing the vehicles up. The Blind Spot Detection System (BSD) may not detect every object alongside the vehicle.

NOTICE

• The system may not properly operate, when the bumper is replaced, or when a repair work is done near the sensor.
• The sensing range differs according to the roads width. When the road is narrow, the system may detect other vehicles in the next lane.
• The system may turn off due to strong electromagnetic waves.

Non-operating condition

Side view mirror may not alert the driver when:
- The side view mirror housing is damaged or covered with debris.
- The window is covered with debris.
- The windows are severely tinted.

DRIVER’S ATTENTION

The driver must be cautious in the below situations, because the system may not detect other vehicles or objects in certain circumstances.

- The vehicle drives on a curved road or through a tollgate.
- The sensor is polluted with rain, snow, mud, etc.
- The rear bumper, in which the sensor is located, is covered or blocked with a foreign matter such as a sticker, a bumper guard, a bicycle stand, etc.
- The rear bumper is damaged, or the sensor is out of the original default position.
- The vehicle height gets lower or higher due to heavy loading in a trunk, abnormal tire pressure, etc.
- The vehicle drives in a bad weather such as heavy rain or snow.

(Continued)
Driving your vehicle

(Continued)
- There is a fixed object near the vehicle, such as a guardrail.
- A big vehicle is near such as a bus or truck.
- A motorcycle or bicycle is near.
- A flat trailer is near.
- If the vehicle has started at the same time as the vehicle next to you and has accelerated.
- When the other vehicle passes at a very fast speed.
- While changing lanes.
- While going down or up a steep road where the height of the lane is different.
- When the other vehicle approaches very close.
- When a trailer or carrier is installed.
- When the temperature of the rear bumper is high.

(Continued)
- When the sensors are blocked by other vehicles, walls or parking-lot pillars.
- When the detected vehicle also moves back, as your vehicle drives back.
- If there are small things like shopping cart and baby carriage.
- If there is low height vehicle like sport vehicle.
- When other vehicles are close to your vehicle.
- When the vehicle in the next lane moves two lanes away from you OR when the vehicle two lanes away moves to the next lane from you.

This device complies with Part 15 of the FCC rules.
Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.
Driving your vehicle

LANE DEPARTURE WARNING SYSTEM (LDWS) (IF EQUIPPED)

This system detects the lane with a sensor at the front windshield and warns you when your vehicle leaves the lane.

WARNING

• The LDWS does not make the vehicle change lanes. It is the driver's responsibility to always check the road conditions.
• Do not turn the steering wheel suddenly when the LDWS warns you that your vehicle is leaving the lane.
• If the sensor cannot detect the lane or if the vehicle speed does not exceed 35 mph (60 km/h), the LDWS won't warn you even though vehicle leaves the lane.
• If your vehicle has window tint or other types of coating or an accessory on the front windshield, the LDWS may not work properly.

(Continued)

(Continued)

• Do not let water or any kind of liquid come in contact with the LDWS sensor.
• Do not remove any LDWS parts and do not expose the sensor to a strong impact.
• Do not put objects that reflect light on the dash board.
• Always monitor road conditions, because you may not hear the warning chime due to audio volume level and or external conditions.
Driving your vehicle

To operate the LDWS, press the button with the engine start/stop button in the ON position. The indicator illuminates on the cluster. To cancel the LDWS, press the button again.

The color of symbol will change depend on the condition of LDWS.
- White color: Indicates the sensor does not detect the lane line.
- Green color: Indicates the sensor detects the lane line.

If your vehicle leaves the lane when the LDWS is operating and vehicle speed exceeds 35 mph (60 km/h), the warning operates as follows:

1. Visual warning
   If you leave the lane, the side of lane you leave blinks yellow on the LCD display with 0.8 seconds of interval.

2. Auditory warning
   If you leave the lane, the warning sound operates with 0.8 seconds of interval.
Driving your vehicle

Warning indicator

If the LDWS FAIL warning indicator (yellow) comes on, the LDWS is not working properly. If this occurs, have the system checked by an authorized HYUNDAI dealer.

The LDWS does not operate when:

• The driver uses the turn signal to change lane.
  When the hazard warning lights are enabled, the LDWS operates normally.
• Operating the wiper switch with HI mode due to heavy rain.
• Driving on the lane line.

* NOTICE
To change lane, operate the turn signal switch then change the lane.

The LDWS may not warn you even if the vehicle leaves the lane, or may warn you even if the vehicle does not leave the lane when;

• The lane is not visible to the system due to snow, rain, stain, a puddle or other environmental factors.
• The brightness of the outside environment changes suddenly such as entering or exiting a tunnel.
• Not turning on the headlights even at night or in a tunnel, or ambient light is weak.
• The system cannot distinguish the color of the lane from the road.
• Driving on a steep grade or a curve.
• A street light, sunlight or oncoming vehicle light reflects water on the road.
• The lens or windshield is stained with foreign matter.
• The sensor cannot detect the lane because of fog, heavy rain or heavy snow.
Driving your vehicle

- The housing of the inside rear view mirror temperature is high due to a direct sunlight.
- The lane is very wide or narrow.
- The lane line is damaged or indistinct.
- A shadow is cast on the lane line by a median strip.
- There is a mark similar to a lane line.
- There is a boundary structure.
- The distance from vehicle ahead is very short or the vehicle ahead covers the lane line.
- The vehicle shakes heavily due to rough roads.
- The lane number increases or decreases or the lane lines cross.
- Objects on the dashboard interfere with system operations.
- Driving with the sun in front of the vehicle.
- Driving in areas under construction.
- The lane line consist of more than two lines either side (left/right).

This device complies with Part 15 of the FCC rules.
Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.
Driving your vehicle

ACTIVE ECO SYSTEM (IF EQUIPPED)

Active ECO operation

Active ECO helps improve fuel efficiency by controlling certain engine and transaxle system operating parameters. Fuel efficiency depends on the driver's driving habit and road condition.

- When the Active ECO button is pressed the ECO indicator (green) will illuminate to show that the Active ECO is operating.
- When the Active ECO is activated, it will remain on until the Active ECO button is pressed again. Active ECO does not turn off when the engine is restarted. To turn off Active ECO, press the Active ECO button again.
- If Active ECO is turned off, the system will return to normal mode.

When Active ECO is activated:
- The engine noise may get louder.
- The vehicle speed may slightly be reduced.
- The air conditioner performance may be affected.

Limitation of Active ECO operation:
If the following conditions occur while Active ECO is operating, the system operation is limited even though there is no change in the ECO indicator.
- When the coolant temperature is low: The system will be limited until engine performance becomes normal.
- When driving up a hill: The system will be limited to gain power when driving uphill because the engine torque is restricted.
- When using sports mode: The system will be limited according to the shift location.
- When the accelerator pedal is deeply depressed for a few seconds: The system will be limited, judging that the driver wants to speed up.
Driving your vehicle

**ECONOMICAL OPERATION**

Your vehicle's fuel economy depends mainly on your style of driving, where you drive and when you drive.

Each of these factors affects how many miles (kilometers) you can get from a gallon (liter) of fuel. To operate your vehicle as economically as possible, use the following driving suggestions to help save money in both fuel and repairs:

- **Drive smoothly.** Accelerate at a moderate rate. Don't make "jack-rabbit" starts or full-throttle shifts and maintain a steady cruising speed. Don't race between stoplights. Try to adjust your speed to the traffic so you don't have to change speeds unnecessarily. Avoid heavy traffic whenever possible. Always maintain a safe distance from other vehicles so you can avoid unnecessary braking. This also reduces brake wear.

- **Drive at a moderate speed.** The faster you drive, the more fuel your vehicle uses. Driving at a moderate speed, especially on the highway, is one of the most effective ways to reduce fuel consumption.

- **Don't "ride" the brake pedal.** This can increase fuel consumption and also increase wear on these components. In addition, driving with your foot resting on the brake pedal may cause the brakes to overheat, which reduces their effectiveness and may lead to more serious consequences.

- **Take care of your tires.** Keep them inflated to the recommended pressure. Incorrect inflation, either too much or too little, results in unnecessary tire wear. Check the tire pressures at least once a month.

- **Be sure that the wheels are aligned correctly.** Improper alignment can result from hitting curbs or driving too fast over irregular surfaces. Poor alignment causes faster tire wear and may also result in other problems as well as greater fuel consumption.

- **Keep your vehicle in good condition.** For better fuel economy and reduced maintenance costs, maintain your vehicle in accordance with the maintenance schedule in Section 7. If you drive your vehicle in severe conditions, more frequent maintenance is required (see Section 7 for details).

- **Keep your vehicle clean.** For maximum service, your vehicle should be kept clean and free of corrosive materials. It is especially important that mud, dirt, ice, etc. not be allowed to accumulate on the underside of the vehicle. This extra weight can result in increased fuel consumption and also contribute to corrosion.

- **Travel lightly.** Don't carry unnecessary weight in your vehicle. Weight reduces fuel economy.

- **Don't let the engine idle longer than necessary.** If you are waiting (and not in traffic), turn off your engine and restart only when you're ready to go.
Driving your vehicle

- Remember, your vehicle does not require extended warm-up. After the engine has started, allow the engine to run for 10 to 20 seconds prior to placing the vehicle in gear. In very cold weather, however, give your engine a slightly longer warm-up period.

- Don't "lug" or "over-rev" the engine. Lugging is driving too slowly in too high a gear resulting engine bucking. If this happens, shift to a lower gear. Over-revving is racing the engine beyond its safe limit. This can be avoided by shifting at the recommended speeds.

- Use your air conditioning sparingly. The air conditioning system is operated by engine power so your fuel economy is reduced when you use it.

- Open windows at high speeds can reduce fuel economy.

- Fuel economy is less in crosswinds and headwinds. To help offset some of this loss, slow down when driving in these conditions.

Keeping a vehicle in good operating condition is important both for economy and safety. Therefore, have an authorized HYUNDAI dealer perform scheduled inspections and maintenance.

**WARNING - Engine off during motion**

Never turn the engine off to coast down hills or anytime the vehicle is in motion. The power steering and power brakes will not function properly without the engine running. Instead, keep the engine on and downshift to an appropriate gear for engine braking effect. In addition, turning off the ignition while driving could engage the steering wheel lock resulting in loss of vehicle steering which could cause serious injury or death.
SPECIAL DRIVING CONDITIONS

Hazardous driving conditions
When hazardous driving conditions are encountered such as water, snow, ice, mud, sand, or similar hazards, follow these suggestions:
• Drive cautiously and allow extra distance for braking.
• Avoid sudden braking or steering.
• When braking with non-ABS brakes pump the brake pedal with a light up-and-down motion until the vehicle is stopped.

⚠️ WARNING - ABS
Do not pump the brake pedal on a vehicle equipped with ABS.

• If stalled in snow, mud, or sand, use second gear. Accelerate slowly to avoid spinning the drive wheels.
• Use sand, rock salt, tire chains, or other non-slip material under the drive wheels to provide traction when stalled in ice, snow, or mud.

⚠️ WARNING - Downshifting
Downshifting with an automatic transaxle, while driving on slippery surfaces can cause an accident. The sudden change in tire speed could cause the tires to skid. Be careful when downshifting on slippery surfaces.

Reducing the risk of a rollover
This multi-purpose passenger vehicle is defined as a Sports Utility Vehicle (SUV). SUV’s have higher ground clearance and a narrower track to make them capable of performing in a wide variety of off-road applications. Specific design characteristics give them a higher center of gravity than ordinary vehicles. An advantage of the higher ground clearance is a better view of the road, which allows you to anticipate problems. They are not designed for cornering at the same speeds as conventional passenger vehicles, any more than low-slung sports vehicles are designed to perform satisfactorily in off-road conditions. Due to this risk, driver and passengers are strongly recommended to buckle their seat belts. In a rollover crash, an unbelted person is more likely to die than a person wearing a seat belt. There are steps that a driver can make to reduce the risk of a rollover.

If at all possible, avoid sharp turns or abrupt maneuvers, do not load your roof rack with heavy cargo, and never modify your vehicle in any way.
Driving your vehicle

**WARNING - Rollover**
As with other Sports Utility Vehicle (SUV), failure to operate this vehicle correctly may result in loss of control, an accident or vehicle rollover.

- Utility vehicles have a significantly higher rollover rate than other types of vehicles.
- Specific design characteristics (higher ground clearance, narrower track, etc.) give this vehicle a higher center of gravity than ordinary vehicles.
- A SUV is not designed for cornering at the same speeds as conventional vehicles.
- Avoid sharp turns or abrupt maneuvers.
- In a rollover crash, an unbelted person is significantly more likely to die than a person wearing a seat belt. Make sure everyone in the vehicle is properly buckled up.

**WARNING**
Your vehicle is equipped with tires designed to provide safe ride and handling capability. Do not use a size and type of tire and wheel that is different from the one that was originally installed on your vehicle. It can affect the safety and performance of your vehicle, which could lead to steering failure or rollover and serious injury. When replacing the tires, be sure to equip all four tires with the tire and wheel of the same size, type, tread, brand and load-carrying capacity. If you nevertheless decide to equip your vehicle with any tire/wheel combination not recommended by HYUNDAI for off road driving, you should not use these tires for highway driving.

**Rocking the vehicle**
If it is necessary to rock the vehicle to free it from snow, sand, or mud, first turn the steering wheel right and left to clear the area around your front wheels. Then, shift back and forth between R (Reverse) and any forward gear in vehicles equipped with an automatic transaxle. Do not race the engine, and spin the wheels as little as possible. If you are still stuck after a few tries, have the vehicle pulled out by a tow vehicle to avoid engine overheating and possible damage to the transaxle.

**CAUTION**
Prolonged rocking may cause engine over-heating, transaxle damage or failure, and tire damage.
Driving your vehicle

**WARNING - Spinning tires**
Do not spin the wheels, especially at speeds more than 35 mph (56 km/h). Spinning the wheels at high speeds when the vehicle is stationary could cause a tire to overheat which could result in tire damage that may injure bystanders.

**NOTICE**
The ESC system should be turned OFF prior to rocking the vehicle.

**WARNING**
If your vehicle becomes stuck in snow, mud, sand, etc., then you may attempt to rock the vehicle free by moving it forward and backward. Do not attempt this procedure if people or objects are anywhere near the vehicle. During the rocking operation the vehicle may suddenly move forward or backward as it becomes unstuck, causing injury or damage to nearby people or objects.

**Smooth cornering**
Avoid braking or gear changing in corners, especially when roads are wet. Ideally, corners should always be taken under gentle acceleration. If you follow these suggestions, tire wear will be held to a minimum.

**Driving at night**
Because night driving presents more hazards than driving in the daylight, here are some important tips to remember:

- Slow down and keep more distance between you and other vehicles, as it may be more difficult to see at night, especially in areas where there may not be any street lights.
- Adjust your mirrors to reduce the glare from other driver's headlights.
Driving your vehicle

- Keep your headlights clean and properly aimed on vehicles not equipped with the automatic headlight aiming feature. Dirty or improperly aimed headlights will make it much more difficult to see at night.

- Avoid staring directly at the headlights of oncoming vehicles. You could be temporarily blinded, and it will take several seconds for your eyes to readjust to the darkness.

Driving in the rain

Rain and wet roads can make driving dangerous, especially if you’re not prepared for the slick pavement. Here are a few things to consider when driving in the rain:

- A heavy rainfall will make it harder to see and will increase the distance needed to stop your vehicle, so slow down.

- Keep your windshield wiping equipment in good shape. Replace your windshield wiper blades when they show signs of streaking or missing areas on the windshield.

- If your tires are not in good condition, making a quick stop on wet pavement can cause a skid and possibly lead to an accident. Be sure your tires are in good shape.

- Turn on your headlights to make it easier for others to see you.

- Driving too fast through large puddles can affect your brakes. If you must go through puddles, try to drive through them slowly.

- If you believe you may have gotten your brakes wet, apply them lightly while driving until normal braking operation returns.
Driving in flooded areas
Avoid driving through flooded areas unless you are sure the water is no higher than the bottom of the wheel hub. Drive through any water slowly. Allow adequate stopping distance because brake performance may be affected.
After driving through water, dry the brakes by gently applying them several times while the vehicle is moving slowly.

Driving off-road
Drive carefully off-road because your vehicle may be damaged by rocks or roots of trees. Become familiar with the off-road conditions where you are going to drive before you begin driving.

Highway driving
Tires:
Adjust the tire inflation pressures to specification. Low tire inflation pressures will result in overheating and possible failure of the tires.
Avoid using worn or damaged tires which may result in reduced traction or tire failure.

★ NOTICE
Never exceed the maximum tire inflation pressure shown on the tires.

⚠️ WARNING
- Underinflated or overinflated tires can cause poor handling, loss of vehicle control, and sudden tire failure leading to accidents, injuries, and even death. Always check the tires for proper inflation before driving. For proper tire pressures, refer to section 8, “Tires and wheels”.
- Driving on tires with no or insufficient tread is dangerous. Worn-out tires can result in loss of vehicle control, collisions, injury, and even death. Worn-out tires should be replaced as soon as possible and should never be used for driving. Always check the tire tread before driving your vehicle. For further information and tread limits, refer to section 7, “Tires and wheels”.
Driving your vehicle

*Fuel, engine coolant and engine oil:*
High speed travel consumes more fuel than urban motoring. Do not forget to check both engine coolant and engine oil.

*Drive belt:*
A loose or damaged drive belt may result in overheating of the engine.
WINTER DRIVING

Severe weather conditions in the winter result in greater wear and other problems. To minimize the problems of winter driving, you should follow these suggestions:

**Snowy or Icy conditions**
To drive your vehicle in deep snow, it may be necessary to use snow tires or to install tire chains on your tires. If snow tires are needed, it is necessary to select tires equivalent in size and type of the original equipment tires. Failure to do so may adversely affect the safety and handling of your vehicle. Furthermore, speeding, rapid acceleration, sudden brake applications, and sharp turns are potentially very hazardous practices. During deceleration, use engine braking to the fullest extent. Sudden brake applications on snowy or icy roads may cause skids to occur. You need to keep sufficient distance between the vehicle in operation in front and your vehicle. Also, apply the brake gently. It should be noted that installing tire chains on the tire will provide a greater driving force, but will not prevent side skids.

**NOTICE**
Tire chains are not legal in all states. Check the state laws before fitting tire chains.

**Snow tires**
If you mount snow tires on your vehicle, make sure they are radial tires of the same size and load range as the original tires. Mount snow tires on all four wheels to balance your vehicle's handling in all weather conditions. Keep in mind that the traction provided by snow tires on dry roads may not be as high as your vehicle's original equipment tires. You should drive cautiously even when the roads are clear. Check with the tire dealer for maximum speed recommendations.

**WARNING - Snow tire size**
Snow tires should be equivalent in size and type to the vehicle's standard tires. Otherwise, the safety and handling of your vehicle may be adversely affected.

Do not install studded tires without first checking local, state and municipal regulations for possible restrictions against their use.
When using tire chains, attach them to the drive wheels as follows.

2WD: Front wheels
AWD: All four wheels

If a full set of chains is not available for an AWD vehicle, chains may be installed on the front wheels only.

**CAUTION**

- **Make sure the snow chains are the correct size and type for your tires.** Incorrect snow chains can cause damage to the vehicle body and suspension and may not be covered by your vehicle manufacturer warranty. Also, the snow chain connecting hooks may be damaged from contacting vehicle components causing the snow chains to come loose from the tire. Make sure the snow chains are SAE class “S” certified.

- **Always check chain installation for proper mounting after driving approximately 0.3 to 0.6 miles (0.5 to 1 km) to ensure safe mounting. Retighten or remount the chains if they are loose.**

Since the sidewalls of radial tires are thinner, they can be damaged by mounting some types of snow chains on them. Therefore, the use of snow tires is recommended instead of snow chains. Do not mount tire chains on vehicles equipped with aluminum wheels; snow chains may cause damage to the wheels. If snow chains must be used, use wire-type chains with a thickness of less than 0.59 in (15 mm). Damage to your vehicle caused by improper snow chain use is not covered by your vehicle manufacturers warranty.
Chain installation
When installing chains, follow the manufacturer's instructions and mount them as tightly as you can. Drive slowly with chains installed. If you hear the chains contacting the body or chassis, stop and tighten them. If they still make contact, slow down until it stops. Remove the chains as soon as you begin driving on cleared roads.

**WARNING - Mounting chains**
When mounting snow chains, park the vehicle on level ground away from traffic. Turn on the vehicle Hazard Warning flashers and place a triangular emergency warning device behind the vehicle if available. Always place the vehicle in P (Park), apply the parking brake and turn off the engine before installing snow chains.

**WARNING - Tire chains**
- The use of chains may adversely affect vehicle handling.
- Do not exceed 20 mph (30 km/h) or the chain manufacturer's recommended speed limit, whichever is lower.
- Drive carefully and avoid bumps, holes, sharp turns, and other road hazards, which may cause the vehicle to bounce.
- Avoid sharp turns or locked-wheel braking.

**CAUTION**
- Chains that are the wrong size or improperly installed can damage your vehicle's brake lines, suspension, body and wheels.
- Stop driving and retighten the chains any time you hear them hitting the vehicle.

**Use high quality ethylene glycol coolant**
Your vehicle is delivered with high quality ethylene glycol coolant in the cooling system. It is the only type of coolant that should be used because it helps prevent corrosion in the cooling system, lubricates the water pump and prevents freezing. Be sure to replace or replenish your coolant in accordance with the maintenance schedule in section 7. Before winter, have your coolant tested to assure that its freezing point is sufficient for the temperatures anticipated during the winter.
Driving your vehicle

Check battery and cables
Winter puts additional burdens on the battery system. Visually inspect the battery and cables as described in section 7. The level of charge in your battery can be checked by an authorized HYUNDAI dealer or a service station.

Change to "winter weight" oil if necessary
In some climates it is recommended that a lower viscosity "winter weight" oil be used during cold weather. See section 8 for recommendations. If you aren't sure what weight oil you should use, consult an authorized HYUNDAI dealer.

Check spark plugs and ignition system
Inspect your spark plugs as described in section 7 and replace them if necessary. Also check all ignition wiring and components to be sure they are not cracked, worn or damaged in any way.

To keep locks from freezing
To keep the locks from freezing, squirt an approved de-icer fluid or glycerine into the key opening. If a lock is covered with ice, squirt it with an approved de-icing fluid to remove the ice. If the lock is frozen internally, you may be able to thaw it out by using a heated key. Handle the heated key with care to avoid injury.

Use approved window washer anti-freeze in system
To keep the water in the window washer system from freezing, add an approved window washer anti-freeze solution in accordance with instructions on the container. Window washer anti-freeze is available from an authorized HYUNDAI dealer and most auto parts outlets. Do not use engine coolant or other types of anti-freeze as these may damage the paint finish.
Don't let your parking brake freeze
Under some conditions your parking brake can freeze in the engaged position. This is most likely to happen when there is an accumulation of snow or ice around or near the rear brakes or if the brakes are wet. If there is a risk the parking brake may freeze, apply it only temporarily while you put the shift lever in P (automatic transaxle) and block the rear wheels so the vehicle cannot roll. Then release the parking brake.

Don't let ice and snow accumulate underneath
Under some conditions, snow and ice can build up under the fenders and interfere with the steering. When driving in severe winter conditions where this may happen, you should periodically check underneath the vehicle to be sure the movement of the front wheels and the steering components is not obstructed.

Carry emergency equipment
Depending on the severity of the weather, you should carry appropriate emergency equipment. Some of the items you may want to carry include tire chains, tow straps or chains, flashlight, emergency flares, sand, a shovel, jumper cables, a window scraper, gloves, ground cloth, coveralls, a blanket, etc.

Don't place foreign objects or materials in the engine compartment
Placement of foreign objects or materials which prevent cooling of the engine, in the engine compartment, may cause a failure or combustion. The manufacturer is not responsible for the damage caused by such placement.
Driving your vehicle

TRAILER TOWING

If you are considering towing with your vehicle, you should first check with your state’s Department of Motor Vehicles to determine their legal requirements.

Since laws vary the requirements for towing trailers, cars, or other types of vehicles or apparatus may differ. Ask an authorized HYUNDAI dealer for further details before towing.

WARNING - Towing a trailer

If you don't use the correct equipment and/or drive improperly, you can lose control when you pull a trailer. For example, if the trailer is too heavy, the brakes may not work well - or even at all. You and your passengers could be seriously or fatally injured. Pull a trailer only if you have followed all the steps in this section.

WARNING - Weight limits

Before towing, make sure the total trailer weight, GCW (gross combination weight), GVW (gross vehicle weight), GAW (gross axle weight) and trailer tongue load are all within the limits.

CAUTION

Pulling a trailer improperly can damage your vehicle and result in costly repairs not covered by your warranty. To pull a trailer correctly, follow the advice in this section.

Your vehicle can tow a trailer. To identify what the vehicle trailering capacity is for your vehicle, you should read the information in “Weight of the trailer” that appears later in this section.

Remember that trailering is different than just driving your vehicle by itself. Trailering means changes in handling, durability, and fuel economy. Successful, safe trailering requires correct equipment, and it has to be used properly.

This section contains many time-tested, important trailering tips and safety rules. Many of these are important for your safety and that of your passengers. Please read this section carefully before you pull a trailer.

Load-pulling components such as the engine, transaxle, wheel assemblies, and tires are forced to work harder against the load of the added weight. The engine is required to operate at relatively higher speeds and under greater loads. This additional burden generates extra heat. The trailer also considerably adds wind resistance, increasing the pulling requirements.
Hitches
It's important to have the correct hitch equipment. Crosswinds, large trucks going by, and rough roads are a few reasons why you'll need the right hitch. Here are some rules to follow:

• Do you have to make any holes in the body of your vehicle when you install a trailer hitch? If you do, then be sure to seal the holes later when you remove the hitch. If you don’t seal them, deadly carbon monoxide (CO) from your exhaust can get into your vehicle, as well as dirt and water.

• The bumpers on your vehicle are not intended for hitches. Do not attach rental hitches or other bumper-type hitches to them. Use only a frame-mounted hitch that does not attach to the bumper.

• HYUNDAI trailer hitch accessory is available at an authorized HYUNDAI dealer.

Safety chains
You should always attach chains between your vehicle and your trailer. Cross the safety chains under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Instructions about safety chains may be provided by the hitch manufacturer or by the trailer manufacturer. Follow the manufacturer’s recommendation for attaching safety chains. Always leave just enough slack so you can turn with your trailer. And, never allow safety chains to drag on the ground.

Trailer brakes
If your trailer is equipped with a braking system, make sure it conforms to federal and/or local regulations and that it is properly installed and operating correctly. If your trailer weight exceeds the maximum allowed weight without trailer brakes, then the trailer will also require its own brakes as well. Be sure to read and follow the instructions for the trailer brakes so you’ll be able to install, adjust and maintain them properly.

• Don’t tap into or modify your vehicle’s brake system.

⚠️ WARNING - Trailer brakes
Do not use a trailer with its own brakes unless you are absolutely certain that you have properly set up the brake system. This is not a task for amateurs. Use an experienced, competent trailer shop for this work.
Driving with a trailer

Towing a trailer requires a certain amount of experience. Before setting out for the open road, you must get to know your trailer. Acquaint yourself with the feel of handling and braking with the added weight of the trailer. And always keep in mind that the vehicle you are driving is now a good deal longer and not nearly so responsive as your vehicle is by itself.

Before you start, check the trailer hitch and platform, safety chains, electrical connector(s), lights, tires and mirror adjustment. If the trailer has electric brakes, start your vehicle and trailer moving and then apply the trailer brake controller by hand to be sure the brakes are working. This lets you check your electrical connection at the same time.

During your trip, check occasionally to be sure that the load is secure, and that the lights and any trailer brakes are still working.

Following distance

Stay at least twice as far behind the vehicle ahead as you would when driving your vehicle without a trailer. This can help you avoid situations that require heavy braking and sudden turns.

Passing

You’ll need more passing distance up ahead when you’re towing a trailer. And, because of the increased vehicle length, you’ll need to go much farther beyond the passed vehicle before you can return to your lane. Due to the added load to the engine when going uphill the vehicle may also take longer to pass than it would on flat ground.

Backing up

Hold the bottom of the steering wheel with one hand. Then, to move the trailer to the left, just move your hand to the left. To move the trailer to the right, move your hand to the right. Always back up slowly and, if possible, have someone guide you.

Making turns

When you’re turning with a trailer, make wider turns than normal. Do this so your trailer won’t strike soft shoulders, curbs, road signs, trees, or other objects near the edge of the road. Avoid jerky or sudden maneuvers. Signal well in advance before turning or lane changes.
**Turn signals when towing a trailer**

When you tow a trailer, your vehicle has to have a different turn signal flasher and extra wiring. The green arrows on your instrument panel will flash whenever you signal a turn or lane change. Properly connected, the trailer lights will also flash to alert other drivers you’re about to turn, change lanes, or stop.

When towing a trailer, the green arrows on your instrument panel will flash for turns even if the bulbs on the trailer are burned out. Thus, you may think drivers behind you are seeing your signals when, in fact, they are not. It’s important to check occasionally to be sure the trailer bulbs are still working. You must also check the lights every time you disconnect and then reconnect the wires.

Do not connect a trailer lighting system directly to your vehicle’s lighting system. Use only an approved trailer wiring harness.

An authorized HYUNDAI dealer can assist you in installing the wiring harness.

**WARNING**

Failure to use an approved trailer wiring harness could result in damage to the vehicle electrical system and/or personal injury.

**Driving on grades**

Reduce speed and shift to a lower gear before you start down a long or steep downgrade. If you don’t shift down, you might have to use your brakes so much that they would get hot and no longer operate efficiently.

On a long uphill grade, shift down and reduce your speed to around 45 mph (70 km/h) to reduce the possibility of engine and transaxle overheating.

Operating your vehicle in D (Drive) when towing a trailer will minimize heat build up and extend the life of your transaxle.
Driving your vehicle

Parking on hills

Generally, if you have a trailer attached to your vehicle, you should not park your vehicle on a hill. People can be seriously or fatally injured, and both your vehicle and the trailer can be damaged if they unexpectedly roll down hill.

However, if you ever have to park your trailer on a hill, here's how to do it:

1. Pull the vehicle into the parking space. Turn the steering wheel in the direction of the curb (right if headed down hill, left if headed up hill).
2. If the vehicle has an automatic transaxle, place the car in P (Park).
3. Set the parking brake and shut off the vehicle.
4. Place chocks under the trailer wheels on the down hill side of the wheels.
5. Start the vehicle, hold the brakes, shift to neutral, release the parking brake and slowly release the brakes until the trailer chocks absorb the load.
6. Reapply the brakes, reapply the parking brake and shift the vehicle to P (Park) for automatic transaxle.
7. Shut off the vehicle and release the vehicle brakes but leave the parking brake set.

CAUTION

- When towing a trailer on steep grades (in excess of 6%) pay close attention to the engine coolant temperature gauge to ensure the engine does not overheat.

If the needle of the coolant temperature gauge moves across the dial towards “H” (HOT), pull over and stop as soon as it is safe to do so, and allow the engine to idle until it cools down. You may proceed once the engine has cooled sufficiently.

- Use caution when driving on an uphill grade to reduce the possibility of engine and transaxle overheating.

WARNING - Parking on a hill

Parking your vehicle on a hill with a trailer attached could cause serious injury or death, should the trailer break loose or the brake stops working.
Driving your vehicle

When you are ready to leave after parking on a hill
1. With the automatic transaxle in P (Park), apply your brakes and hold the brake pedal down while you:
   • Start your engine;
   • Shift into gear; and
   • Release the parking brake.
2. Slowly remove your foot from the brake pedal.
3. Drive slowly until the trailer is clear of the chocks.
4. Stop and have someone pick up and store the chocks.

Maintenance when trailer towing
Your vehicle will need service more often when you regularly pull a trailer. Important items to pay particular attention to include engine oil, automatic transaxle fluid, axle lubricant and cooling system fluid. Brake condition is another important item to frequently check. Each item is covered in this manual, and the Index will help you find them quickly. If you’re trailering, it’s a good idea to review these sections before you start your trip.

Don’t forget to also maintain your trailer and hitch. Follow the maintenance schedule that accompanied your trailer and check it periodically. Preferably, conduct the check at the start of each day’s driving. Most importantly, all hitch nuts and bolts should be tight.

⚠️ WARNING - Parking brake
It can be dangerous to get out of your vehicle if the parking brake is not firmly set.
If you have left the engine running, the vehicle can move suddenly. You or others could be seriously or fatally injured.

⚠️ CAUTION
• Due to higher load during trailer usage, overheating might occur in hot days or during uphill driving. If the coolant gauge indicates overheating, switch off the A/C and stop the vehicle in a safe area to cool down the engine.
• When towing check transaxle fluid more frequently.
Driving your vehicle

If you do decide to pull a trailer
Here are some important points if you decide to pull a trailer:

- Consider using a sway control. You can ask a hitch dealer about sway control.
- Do not do any towing with your car during its first 1,200 miles (2,000 km) in order to allow the engine to properly break in. Failure to heed this caution may result in serious engine or transaxle damage.
- When towing a trailer, be sure to consult an authorized HYUNDAI dealer for further information on additional requirements such as a towing kit, etc.
- Always drive your vehicle at a moderate speed (less than 60 mph (100 km/h)).
- On a long uphill grade, do not exceed 45 mph (70 km/h) or the posted towing speed limit, whichever is lower.
- The chart contains important considerations that have to do with weight:

<table>
<thead>
<tr>

<tr>
<td>load on the coupling device</td>
<td>lbs. (kg)</td>
</tr>
</tbody>
</table>
Driving your vehicle

**Weight of the trailer**

What is the maximum safe weight of a trailer? It should never weigh more than the maximum trailer weight with trailer brakes. But even that can be too heavy.

It depends on how you plan to use your trailer. For example, speed, altitude, road grades, outside temperature and how often your vehicle is used to pull a trailer are all important. The ideal trailer weight can also depend on any special equipment that you have on your vehicle.

**Weight of the trailer tongue**

The tongue load of any trailer is an important weight to measure because it affects the total gross vehicle weight (GVW) of your vehicle. This weight includes the curb weight of the vehicle, any cargo you may carry in it, and the people who will be riding in the vehicle. And if you will tow a trailer, you must add the tongue load to the GVW because your vehicle will also be carrying that weight.

The trailer tongue should weigh a maximum of 10% of the total loaded trailer weight, within the limits of the maximum permissible trailer tongue load. After you've loaded your trailer, weigh the trailer and then the tongue, separately, to see if the weights are proper. If they aren't, you may be able to correct them simply by moving some items around in the trailer.
Driving your vehicle

⚠️ WARNING - Trailer

• Never load a trailer with more weight in the rear than in the front. The front should be loaded with approximately 60% of the total trailer load; the rear should be loaded with approximately 40% of the total trailer load.

• Never exceed the maximum weight limits of the trailer or trailer towing equipment. Improper loading can result in damage to your vehicle and/or personal injury. Check weights and loading at a commercial scale or highway patrol office equipped with scales.

• An improperly loaded trailer can cause loss of vehicle control.
Driving your vehicle

**VEHICLE LOAD LIMIT**

**Tire and loading information label**

The label located on the driver's door sill gives the original tire size, cold tire pressures recommended for your vehicle, the number of people that can be in your vehicle and vehicle capacity weight.

**Vehicle capacity weight:**

930 lbs. (420 kg)

Vehicle capacity weight is the maximum combined weight of occupants and cargo. If your vehicle is equipped with a trailer, the combined weight includes the tongue load.

**Seating capacity:**

Total : 5 persons  
(Front seat : 2 persons,  
Rear seat : 3 persons)

Seating capacity is the maximum number of occupants including a driver, your vehicle may carry. However, the seating capacity may be reduced based upon the weight of all of the occupants, and the weight of the cargo being carried or towed.

Do not overload the vehicle as there is a limit to the total weight, or load limit including occupants and cargo, the vehicle can carry.
Towing capacity:
Without trailer brakes: 1653 lbs. (750 kg)
With trailer brakes: 2000 lbs. (907 kg)
Towing capacity is the maximum trailer weight including its cargo weight, your vehicle can tow.

Cargo capacity:
The cargo capacity of your vehicle will increase or decrease depending on the weight and the number of occupants and the tongue load, if your vehicle is equipped with a trailer.

Steps For Determining Correct Load Limit
1. Locate the statement "The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs." on your vehicle's placard.
2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.
3. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.
4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the "XXX" amount equals 1400 lbs. and there will be five 150 lbs. passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lb (1400-750 (5 x 150) = 650 lbs.)
5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.
6. If your vehicle will be towing a trailer, the load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.
Refer to your vehicle’s tire and loading information label for specific information about your vehicle’s capacity weight and seating positions. The combined weight of the driver, passengers and cargo should never exceed your vehicle’s capacity weight.
Driving your vehicle

Certification label

The certification label is located on the driver's door sill at the center pillar. This label shows the maximum allowable weight of the fully loaded vehicle. This is called the GVWR (Gross Vehicle Weight Rating). The GVWR includes the weight of the vehicle, all occupants, fuel and cargo.

This label also tells you the maximum weight that can be supported by the front and rear axles, called Gross Axle Weight Rating (GAWR).

To find out the actual loads on your front and rear axles, you need to go to a weigh station and weigh your vehicle. Your dealer can help you with this. Be sure to spread out your load equally on both sides of the centerline.

WARNING - Over loading

- Never exceed the GVWR for your vehicle, the GAWR for either the front or rear axle and vehicle capacity weight. Exceeding these ratings can cause an accident or vehicle damage. You can calculate the weight of your load by weighing the items (or people) before putting them in the vehicle. Be careful not to overload your vehicle.

- Do not load your vehicle any heavier than the GVWR, either the maximum front or rear GAWR and vehicle capacity weight. If you do, parts, including tires on your vehicle can break, and it can change the way your vehicle handles and braking ability. This could cause you to lose control and crash. Also, overloading can shorten the life of your vehicle.
The label will help you decide how much cargo and installed equipment your vehicle can carry.

If you carry items inside your vehicle - like suitcases, tools, packages, or anything else - they are moving as fast as the vehicle. If you have to stop or turn quickly, or if there is a crash, the items will keep going and can cause an injury if they strike the driver or a passenger.

**CAUTION**

- Overloading your vehicle may cause damage. Repairs would not be covered by your warranty. Do not overload your vehicle.
- Using heavier suspension components to get added durability might not change your weight ratings. Ask your dealer to help you load your vehicle the right way.

**WARNING** - Loose cargo

Items you carry inside your vehicle can strike and injure occupants in a sudden stop or turn, or in a crash.

- Put items in the cargo area of your vehicle. Try to spread the weight evenly.
- Never stack items, like suitcases, inside the vehicle above the tops of the seats.
- Do not leave an unsecured child restrained in your vehicle.
- When you carry something inside the vehicle, secure it.
- Do not drive with a seat folded down unless necessary.

**WARNING**

- Overloading your vehicle can cause heat buildup in your vehicle's tires and possible tire failure that could lead to a crash.
- Overloading your vehicle can cause increased stopping distances that could lead to a crash.
- A crash resulting from poor handling vehicle damage, tire failure, or increased stopping distances could result in serious injury or death.
VEHICLE WEIGHT

This section will guide you in the proper loading of your vehicle and/or trailer, to keep your loaded vehicle weight within its design rating capability, with or without a trailer. Properly loading your vehicle will provide maximum return of the vehicle design performance. Before loading your vehicle, familiarize yourself with the following terms for determining your vehicle's weight ratings, with or without a trailer, from the vehicle's specifications and the compliance label:

**Base curb weight**
This is the weight of the vehicle including a full tank of fuel and all standard equipment. It does not include passengers, cargo, or optional equipment.

**Vehicle curb weight**
This is the weight of your new vehicle when you picked it up from your dealer plus any aftermarket equipment.

**Cargo weight**
This figure includes all weight added to the Base Curb Weight, including cargo and optional equipment.

**GAW (Gross axle weight)**
This is the total weight placed on each axle (front and rear) - including vehicle curb weight and all payload.

**GAWR (Gross axle weight rating)**
This is the maximum allowable weight that can be carried by a single axle (front or rear). These numbers are shown on the compliance label. The total load on each axle must never exceed its GAWR.

**GVW (Gross vehicle weight)**
This is the Base Curb Weight plus actual Cargo Weight plus passengers.

**GVWR (Gross vehicle weight rating)**
This is the maximum allowable weight of the fully loaded vehicle (including all options, equipment, passengers and cargo). The GVWR is shown on the certification label.

What to do in an emergency

ROAD WARNING
Hazard warning flasher

The hazard warning flasher serves as a warning to other drivers to exercise extreme caution when approaching, overtaking, or passing your vehicle. It should be used whenever emergency repairs are being made or when the vehicle is stopped near the edge of a roadway.

Depress the flasher switch with the ignition switch in any position. The flasher switch is located in the center console switch panel. All turn signal lights will flash simultaneously.

When you must make such an emergency stop, always pull off the road as far as possible.

• The hazard warning flasher operates whether your vehicle is running or not.
• The turn signals do not work when the hazard flasher is on.
• Care must be taken when using the hazard warning flasher while the vehicle is being towed.
• To turn the hazard warning lights off, push the switch again.
# IN CASE OF AN EMERGENCY WHILE DRIVING

## If the engine stalls at a crossroad or crossing
If the engine stalls at a crossroad or crossing, set the shift lever in the N (Neutral) position and then push the vehicle to a safe place.

## If you have a flat tire while driving
If a tire goes flat while you are driving:
1. Take your foot off the accelerator pedal and let the car slow down while driving straight ahead. Do not apply the brakes immediately or attempt to pull off the road as this may cause a loss of control. When the car has slowed to such a speed that it is safe to do so, brake carefully and pull off the road. Drive off the road as far as possible and park on firm, level ground. If you are on a divided highway, do not park in the median area between the two traffic lanes.
2. When the vehicle is stopped, turn on your emergency hazard flashers, set the parking brake and put the transaxle in P.
3. Have all passengers get out of the car. Be sure they all get out on the side of the car that is away from traffic.
4. When repairing a flat tire, follow the instruction provided later in this section.

## If engine stalls while driving
1. Reduce your speed gradually, keeping a straight line. Move cautiously off the road to a safe place.
2. Turn on your emergency flashers.
3. Try to start the engine again. If your vehicle will not start, contact an authorized HYUNDAI dealer or seek other qualified assistance.

*NOTICE*
If there was a check engine light and loss of power or stall, it is best if safe to do so to wait at least 10 seconds to restart a vehicle after it stalls. This may reset the car so it will no longer run at low power (limp home) condition.
What to do in an emergency

IF THE ENGINE WILL NOT START

If engine doesn't turn over or turns over slowly
1. If your vehicle has an automatic transaxle, be sure the shift lever is in N (Neutral) or P (Park) and the emergency brake is set.
2. Check the battery connections to be sure they are clean and tight.
3. Turn on the interior light. If the light dims or goes out when you operate the starter, the battery is discharged.
4. Do not push or pull the vehicle to start it. See instructions for "Jump starting".

If engine turns over normally but does not start
1. Check fuel level.
2. With the ignition switch in the LOCK position, check all connectors at ignition coils and spark plugs. Reconnect any that may be disconnected or loose.
3. If the engine still does not start, call an authorized HYUNDAI dealer or seek other qualified assistance.

WARNING
If the engine will not start, do not push or pull the vehicle to start it. This could result in a collision or cause other damage. In addition, push or pull starting may cause the catalytic converter to be overloaded and create a fire hazard.
EMERGENCY STARTING

Jumper Cables

Jump starting

Jump starting can be dangerous if done incorrectly. Therefore, to avoid harm to yourself or damage to your vehicle or battery, follow the jump starting procedures. If in doubt, we strongly recommend that you have a technician or towing service jump start your vehicle.

CAUTION

Use only a 12-volt jumper system. You can damage a 12-volt starting motor, ignition system, and other electrical parts beyond repair by use of a 24-volt power supply (either two 12-volt batteries in series or a 24-volt motor generator set).

WARNING - Battery
- Keep all flames or sparks away from the battery. The battery produces hydrogen gas which may explode if exposed to flame or sparks.
- If these instructions are not followed exactly, serious personal injury and damage to the vehicle may occur! If you are not sure how to follow this procedure, seek qualified assistance. Automobile batteries contain sulfuric acid. This is poisonous and highly corrosive. When jump starting, wear protective glasses and be careful not to get acid on yourself, your clothing or on the car.
- Do not attempt to jump start the vehicle if the discharged battery is frozen or if the electrolyte level is low; the battery may rupture or explode.
Jump starting procedure

NOTICE

If the battery is discharged, the engine can be started using a battery of another vehicle and two jumper cables. Only use jumper cables with fully insulated clamp handles. To prevent personal injury or damage to both vehicles, adhere strictly to the following procedure.

1. Make sure the booster battery is 12-volt and that its negative terminal is grounded.
2. If the booster battery is in another vehicle, do not allow the vehicles to touch.
3. Turn off all unnecessary electrical loads.
4. Connect the jumper cables in the exact sequence shown in the illustration. First connect one end of a jumper cable to the positive terminal of the discharged battery (1), then connect the other end to the positive terminal on the booster battery (2). Proceed to connect one end of the other jumper cable to the negative terminal of the booster battery (3), then the other end to a solid, stationary, metallic point (for example, the engine lifting bracket) away from the battery (4). Do not connect it to or near any part that moves when the engine is cranked.

Make sure that there is no contact between the bodywork of the two vehicles; otherwise, there is the danger of short circuits.

Do not allow the jumper cables to contact anything except the correct battery terminals or the correct ground. Do not lean over the battery when making connections.

5. Start the engine of the vehicle with the booster battery and let it run at 2,000 rpm, then start the engine of the vehicle with the discharged battery. If the first starting attempt is not successful, wait a few minutes before making another attempt in order to allow the discharged battery to recharge.

To charge the discharged battery enough, it is recommended to let the engine at idle or to drive the vehicle for a certain period of time.

If the cause of your battery discharging is not apparent, you should have your vehicle checked by an authorized HYUNDAI dealer.
Push-starting
Vehicles equipped with automatic transaxle cannot be push-started. Follow the directions in this section for jump-starting.

WARNING
Never tow a vehicle to start it because the sudden surge forward when the engine starts could cause a collision with the tow vehicle.
What to do in an emergency

**IF THE ENGINE OVERHEATS**

If your temperature gauge indicates overheating, you experience a loss of power, or hear loud pinging or knocking, the engine is probably too hot. If this happens, you should:

1. Pull off the road and stop as soon as it is safe to do so.
2. Place the shift lever in P and set the parking brake. If the air conditioning is on, turn it off.
3. If engine coolant is running out under the car or steam is coming out from the hood, stop the engine. Do not open the hood until the coolant has stopped running or the steaming has stopped. If there is no visible loss of engine coolant and no steam, leave the engine running and check to be sure the engine cooling fan is operating. If the fan is not running, turn the engine off.
4. Check to see if the water pump drive belt is missing. If it is not missing, check to see that it is tight. If the drive belt seems to be satisfactory, check for coolant leaking from the radiator, hoses or under the car. (If the air conditioning had been in use, it is normal for cold water to be draining from it when you stop.)
5. If the water pump drive belt is broken or engine coolant is leaking out, stop the engine immediately and call the nearest authorized HYUNDAI dealer for assistance.
6. If you cannot find the cause of the overheating, wait until the engine temperature has returned to normal. Then, if coolant has been lost, carefully add coolant to the reservoir to bring the fluid level in the reservoir up to the halfway mark.
7. Proceed with caution, keeping alert for further signs of overheating. If overheating happens again, call an authorized HYUNDAI dealer for assistance.

**WARNING**

While the engine is running, keep hair, hands and clothing away from moving parts such as the fan and drive belts to prevent injury.

**WARNING**

Do not remove the radiator cap when the engine is hot. This may result in coolant being blown out of the opening and cause serious burns.

**CAUTION**

Serious loss of coolant indicates there is a leak in the cooling system and this should be checked as soon as possible by an authorized HYUNDAI dealer.
What to do in an emergency

TIRE PRESSURE MONITORING SYSTEM (TPMS)

Check tire pressure

- You can check the tire pressure unit in the user settings mode on the cluster.
  - Refer to “User settings mode” in chapter 4.

- Tire pressure is displayed 1~2 minutes later after driving.
- If tire pressure is not displayed when the vehicle is stopped, “Drive to display” message displays. After driving, check the tire pressure.

(1) Low Tire Pressure Telltale/TPMS Malfunction Indicator
(2) Low tire pressure position telltale and tire pressure telltale
(Shown on the LCD display)
What to do in an emergency

Tire pressure monitoring system

**WARNING**
Over-inflation or under-inflation can reduce tire life, adversely affect vehicle handling, and lead to sudden tire failure that may cause loss of vehicle control resulting in an accident.

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

WARNING
Over-inflation or under-inflation can reduce tire life, adversely affect vehicle handling, and lead to sudden tire failure that may cause loss of vehicle control resulting in an accident.
**NOTICE**

If any of the below happens, we recommend that the system be checked by an authorized HYUNDAI dealer.

1. The low tire pressure telltale/TPMS malfunction indicator does not illuminate for 3 seconds when Engine Start/Stop button is turned to the ON or engine is running.
2. The TPMS malfunction indicator remains illuminated after blinking for approximately 1 minute.
3. The Low tire pressure position telltale remains illuminated.

When the tire pressure monitoring system warning indicators are illuminated and warning message displayed on the cluster LCD display, one or more of your tires is significantly under-inflated. The low tire pressure position telltale light will indicate which tire is significantly under-inflated by illuminating the corresponding position light.

If either telltale illuminates, immediately reduce your speed, avoid hard cornering and anticipate increased stopping distances. You should stop and check your tires as soon as possible. Inflate the tires to the proper pressure as indicated on the vehicle’s placard or tire inflation pressure label located on the driver’s side center pillar outer panel. If you cannot reach a service station or if the tire cannot hold the newly added air, replace the low pressure tire with a spare tire.

If you drive the vehicle for about 10 minutes at speeds above 15.5 mph (25 km/h) after replacing the low pressure tire with the spare tire, the below will happen:

- The TPMS malfunction indicator may blink for approximately 1 minute and then remain continuously illuminated because the TPMS sensor is not mounted on the spare wheel.
What to do in an emergency

✽ NOTICE
The spare tire is not equipped with a tire pressure sensor.

⚠️ CAUTION
In winter or cold weather, the low tire pressure telltale may illuminate if the tire pressure was adjusted to the recommended tire inflation pressure in warm weather. It does not mean your TPMS is malfunctioning because the decreased temperature leads to a lowering of tire pressure.

When you drive your vehicle from a warm area to a cold area or from a cold area to a warm area, or the outside temperature is higher or lower, you should check the tire inflation pressure and adjust the tires to the recommended tire inflation pressure.

⚠️ WARNING - Low pressure damage
Significantly low tire pressure makes the vehicle unstable and can contribute to loss of vehicle control and increased braking distances.
Continued driving on low pressure tires can cause the tires to overheat and fail.

TPMS (Tire Pressure Monitoring System) malfunction indicator

The TPMS malfunction indicator will illuminate after it blinks for approximately one minute when there is a problem with the Tire Pressure Monitoring System.
We recommend that the system be checked by an authorized HYUNDAI dealer.

✽ NOTICE
If there is a malfunction with the TPMS, the low tire pressure position telltale will not be displayed even though the vehicle has an under-inflated tire.
What to do in an emergency

Changing a tire with TPMS
If you have a flat tire, the low Tire Pressure and Position telltales will come on. We recommend that the system be checked by an authorized HYUNDAI dealer.

CAUTION

Never use a puncture-repairing agent to repair and/or inflate a low pressure tire. The tire sealant can damage the tire pressure sensor. If used, you will have to replace the tire pressure sensor.

Each wheel is equipped with a tire pressure sensor mounted inside the tire behind the valve stem. You must use TPMS specific wheels. It is recommended that you have your tires serviced by an authorized HYUNDAI dealer.

If you drive the vehicle for about 10 minutes at speeds above 15.5 mph (25 km/h) after replacing the low pressure tire with the spare tire, the below will happen:

• The TPMS malfunction indicator may blink for approximately 1 minute and then remain continuously illuminated if the vehicle is moving around electric power supply cables or radios transmitter such as at police stations, government and public offices, broadcasting stations, military installations, airports, or transmitting towers, etc. This can interfere with normal operation of the Tire Pressure Monitoring System (TPMS).

• The TPMS malfunction indicator may blink for approximately 1 minute and then remain continuously illuminated if snow chains are used or some separate electronic devices such as notebook computer, mobile charger, remote starter or navigation etc., are used in the vehicle.

This can interfere with normal operation of the Tire Pressure Monitoring System (TPMS).

CAUTION

You may not be able identify a low tire by simply looking at it. Always use a good quality tire pressure gauge to measure the tire’s inflation pressure. Please note that a tire that is hot (from being driven) will have a higher pressure measurement than a tire that is cold (from sitting stationary for at least 3 hours and driven less than 1 mile (1.6 km) during that 3 hour period).

Allow the tire to cool before measuring the inflation pressure. Always be sure the tire is cold before inflating to the recommended pressure.

CAUTION

Never use a puncture-repairing agent to repair and/or inflate a low pressure tire. The tire sealant can damage the tire pressure sensor. If used, you will have to replace the tire pressure sensor.
What to do in an emergency

A cold tire means the vehicle has been sitting for 3 hours and driven for less than 1 mile (1.6 km) in that 3 hour period.

**WARNING - TPMS**
- The TPMS cannot alert you to severe and sudden tire damage caused by external factors such as nails or road debris.
- If you feel any vehicle instability, immediately take your foot off the accelerator, apply the brakes gradually and with light force, and slowly move to a safe position off the road.

**WARNING - Protecting TPMS**
Tampering with, modifying, or disabling the Tire Pressure Monitoring System (TPMS) components may interfere with the system's ability to warn the driver of low tire pressure conditions and/or TPMS malfunctions. Tampering with, modifying, or disabling the Tire Pressure Monitoring System (TPMS) components may void the warranty for that portion of the vehicle.

**This device complies with Part 15 of the FCC rules.**
Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

**CAUTION**
Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
IF YOU HAVE A FLAT TIRE (WITH SPARE TIRE)

Jack and tools

The jack, jack handle, and wheel lug nut wrench are stored in the luggage compartment. Pull up the luggage box cover to find these equipment.
(1) Jack handle
(2) Jack
(3) Wheel lug nut wrench
(4) Socket

Jacking instructions

The jack is provided for emergency tire changing only.
To prevent the jack from “rattling” while the vehicle is in motion, store it properly.
Follow jacking instructions to reduce the possibility of personal injury.

WARNING - Changing tires

• Never attempt vehicle repairs in the traffic lanes of a public road or highway.
• Always move the vehicle completely off the road and onto the shoulder before trying to change a tire. The jack should be used on level firm ground. If you cannot find a firm, level place off the road, call a towing service company for assistance.
• Be sure to use the correct front and rear jacking positions on the vehicle; never use the bumpers or any other part of the vehicle for jack support.
• The vehicle can roll off the jack causing serious injury or death. No person should place any portion of their body under a vehicle that is supported only by a jack; use vehicle support stands.

(Continued)
What to do in an emergency

(Continued)

• Do not start or run the engine while the vehicle is on the jack.
• Do not allow anyone to remain in the vehicle while it is on the jack.
• Make sure any children present are in a secure place away from the road and from the vehicle to be raised with the jack.

Removing and storing the spare tire

Your spare tire is stored underneath your vehicle, directly below the cargo area.
To remove the spare tire:
1. Open the liftgate (tailgate).
2. Remove the cover with coin or flat-head screwdriver.
3. Connect the socket and wheel lug nut wrench.
4. Loosen the bolt enough to lower the spare tire.
Turn the wrench counterclockwise until the spare tire reaches the ground.
5. After the spare tire reaches the ground, continue to turn the wrench counterclockwise, and draw the spare tire outside. Never rotate the wrench excessively, otherwise the spare tire carrier may be damaged.

6. Remove the retainer (1) from the center of the spare tire

To store the spare tire:
1. Lay the tire on the ground with the valve stem facing up.
2. Place the wheel under the vehicle and install the retainer (1) through the wheel center.
3. Turn the wrench clockwise until it clicks.

**WARNING - Storing the spare tire**

Ensure the spare tire retainer is properly aligned with the center of the spare tire to prevent the spare tire from “rattling”. Otherwise, it may cause the spare tire to fall off the carrier and lead to an accident.
What to do in an emergency

**Changing tires**

1. Park on a level surface and apply the parking brake firmly.
2. Shift the shift lever into P (Park).
3. Activate the hazard warning flasher.
4. Remove the wheel lug nut wrench, jack, jack handle, and spare tire from the vehicle.
5. Block both the front and rear of the wheel that is diagonally opposite the jack position.

**WARNING - Changing a tire**

- To prevent vehicle movement while changing a tire, always set the parking brake fully, and always block the wheel diagonally opposite the wheel being changed.
- We recommend that the wheels of the vehicle be blocked, and that no person remain in a vehicle that is being jacked.
6. Loosen the wheel lug nuts counterclockwise one turn each, but do not remove any nut until the tire has been raised off the ground.

7. Place the jack at the front or rear jacking position closest to the tire you are changing. Place the jack at the designated locations under the frame.

8. Insert the jack handle into the jack and turn it clockwise, raising the vehicle until the tire just clears the ground. This measurement is approximately 1.2 in (30 mm). Before removing the wheel lug nuts, make sure the vehicle is stable and that there is no chance for movement or slippage.

**WARNING - Jack location**

To reduce the possibility of injury, be sure to use only the jack provided with the vehicle and in the correct jack position; never use any other part of the vehicle for jack support.
9. Loosen the wheel nuts and remove them with your fingers. Slide the wheel off the studs and lay it flat so it cannot roll away. To put the wheel on the hub, pick up the spare tire, line up the holes with the studs and slide the wheel onto them. If this is difficult, tip the wheel slightly and get the top hole in the wheel lined up with the top stud. Then juggle the wheel back and forth until the wheel can be slid over the other studs.

10. To reinstall the wheel, hold it on the studs, put the wheel nuts on the studs and tighten them finger tight. The nuts should be installed with their tapered small diameter ends directed inward. Jiggle the tire to be sure it is completely seated, then tighten the nuts as much as possible with your fingers again.

11. Lower the car to the ground by turning the wheel nut wrench counterclockwise.

**WARNING**
Wheels may have sharp edges. Handle them carefully to avoid possible severe injury. Before putting the wheel into place, be sure that there is nothing on the hub or wheel (such as mud, tar, gravel, etc.) that prevents the wheel from fitting solidly against the hub. If there is, remove it. If there is not good contact on the mounting surface between the wheel and hub, the wheel nuts could come loose and cause the loss of a wheel. Loss of a wheel may result in loss of control of the vehicle. This may cause serious injury or death.
What to do in an emergency

Then position the wrench as shown in the drawing and tighten the wheel nuts. Be sure the socket is seated completely over the nut. Do not stand on the wrench handle or use an extension pipe over the wrench handle. Go around the wheel tightening every other nut until they are all tight. Then double-check each nut for tightness. After changing wheels, have an authorized HYUNDAI dealer tighten the wheel nuts to their proper torque as soon as possible.

Wheel nut tightening torque:
Steel wheel & aluminum alloy wheel: 65~79 lbf·ft (9~11 kgf·m)

If you have a tire gauge, remove the valve cap and check the air pressure. If the pressure is lower than recommended, drive slowly to the nearest service station and inflate to the correct pressure. If it is too high, adjust it until it is correct. Always reinstall the valve cap after checking or adjusting tire pressure. If the cap is not replaced, air may leak from the tire. If you lose a valve cap, buy another and install it as soon as possible.

After you have changed wheels, always secure the flat tire in its place and return the jack and tools to their proper storage locations.

⚠️ CAUTION
Your vehicle has metric threads on the wheel studs and nuts. Make certain during wheel removal that the same nuts that were removed are reinstalled - or, if replaced, that nuts with metric threads and the same chamfer configuration are used. Installation of a non-metric thread nut on a metric stud or vice-versa will not secure the wheel to the hub properly and will damage the stud so that it must be replaced.

Note that most lug nuts do not have metric threads. Be sure to use extreme care in checking for thread style before installing aftermarket lug nuts or wheels. If in doubt, consult an authorized HYUNDAI dealer.
What to do in an emergency

To prevent the jack, jack handle, wheel lug nut wrench and spare tire from rattling while the vehicle is in motion, store them properly.

**WARNING - Wheel studs**
If the studs are damaged, they may lose their ability to retain the wheel. This could lead to the loss of the wheel and a collision resulting in serious injuries.

**WARNING - Inadequate spare tire pressure**
Check the inflation pressures as soon as possible after installing the spare tire. Adjust it to the specified pressure, if necessary. Refer to “Tires and wheels” section 8.

**Important - use of temporary compact spare tire**
If your vehicle is equipped with a compact spare tire, it will take up less space than a regular-size tire. This tire is smaller than a conventional tire and is designed for temporary use only.

**CAUTION**
- You should drive carefully when the temporary compact spare is in use. The compact spare should be replaced by the proper conventional tire and rim at the first opportunity.
- Do not drive a vehicle with more than one compact spare tire in use at the same time.

**WARNING**
The temporary compact spare tire is for emergency use only. Do not operate your vehicle on this compact spare at speeds over 50 mph (80 km/h). The original tire should be repaired or replaced as soon as is possible to avoid failure of the spare possibly leading to personal injury or death.

The compact spare should be inflated to 60 psi (420 kPa).

**NOTICE**
Check the inflation pressure after installing the spare tire. Adjust it to the specified pressure, as necessary.
When using a temporary compact spare tire, observe the following precautions:

- Under no circumstances should you exceed 50 mph (80 km/h); higher speeds could damage the tire.
- Ensure that you drive slowly enough for the road conditions to avoid all hazards. Any road hazard, such as a pothole or debris, could seriously damage the compact spare.
- Any continuous road use of this tire could result in tire failure, loss of vehicle control, and possible personal injury.
- Do not exceed the vehicle’s maximum load rating or the load-carrying capacity shown on the sidewall of the compact spare tire.
- Avoid driving over obstacles. The compact spare tire diameter is smaller than the diameter of a conventional tire and reduces the ground clearance approximately 1 inch (25 mm), which could result in damage to the vehicle.
- Do not take the vehicle through an automatic car wash while the compact spare tire is installed.
- Do not use tire chains on the compact spare tire. Because of the smaller size, a tire chain will not fit properly. This could damage the vehicle and result in loss of the chain.
- Do not use the compact spare tire on any other vehicle because this tire has been designed especially for your vehicle.
- The compact spare tire’s tread life is shorter than a regular tire. Inspect your compact spare tire regularly and replace worn compact spare tires with the same size and design, mounted on the same wheel.
- The compact spare tire should not be used on any other wheels, nor should standard tires, snow tires, wheel covers or trim rings be used with the compact spare wheel. If such use is attempted, damage to these items or other car components may occur.
- Do not use more than one compact spare tire at a time.
- Do not tow a trailer while the compact spare tire is installed.
**What to do in an emergency**

**Jack label**

1. **Model Name**
2. **Maximum allowable load**
3. **When using the jack, set your parking brake.**
4. **When using the jack, stop the engine.**
5. **Do not get under a vehicle that is supported by a jack.**
6. **The designated locations under the frame**
7. **When supporting the vehicle, the base plate of jack must be vertical under the lifting point.**
8. **Shift into Reverse gear on vehicles with manual transaxle or move the shift lever to the P position on vehicles with automatic transaxle.**
9. **The jack should be used on firm level ground.**
10. **Jack manufacturer**
11. **Production date**
12. **Representative company and address**

※ The actual Jack label in the vehicle may differ from the illustration. For more detailed specifications, refer to the label attached to the jack.
What to do in an emergency

TOWING
Towing service

If emergency towing is necessary, we recommend having it done by an authorized HYUNDAI dealer or a commercial tow-truck service. Proper lifting and towing procedures are necessary to prevent damage to the vehicle. The use of wheel dollies or flatbed is recommended.

For trailer towing guidelines information, refer to "Trailer towing" in chapter 5.

On AWD vehicles, your vehicle must be towed with a wheel lift and dollies or flatbed equipment with all the wheels off the ground.

⚠️ CAUTION
The AWD vehicle should never be towed with the wheels on the ground. This can cause serious damage to the transaxle or the AWD system.

On 2WD vehicles, it is acceptable to tow the vehicle with the rear wheels on the ground (without dollies) and the front wheels off the ground.

If any of the loaded wheels or suspension components are damaged or the vehicle is being towed with the front wheels on the ground, use a towing dolly under the front wheels.

When being towed by a commercial tow truck and wheel dollies are not used, the front of the vehicle should always be lifted, not the rear.

⚠️ CAUTION
- Do not tow with sling-type equipment. Use wheel lift or flatbed equipment.
- Do not tow the vehicle backwards with the front wheels on the ground as this may cause damage to the vehicle.
When towing your vehicle in an emergency without wheel dollies:
1. Set the ignition switch in the ACC position.
2. Place the shift lever in N (Neutral).
3. Release the parking brake.

**CAUTION**

*Failure to place the transaxle shift lever in N (Neutral) may cause internal damage to the transaxle.*

### Removable towing hook (if equipped)

1. Open the tailgate, and remove the towing hook from the tool case.
2. Remove the hole cover pressing the lower part of the cover on the bumper.
3. Install the towing hook by turning it clockwise into the hole until it is fully secured.
4. Remove the towing hook and install the cover after use.

### Emergency towing

If towing is necessary, we recommend you to have it done by an authorized HYUNDAI dealer or a commercial tow truck service.
If towing service is not available in an emergency, your vehicle may be temporarily towed using a cable or chain secured to the emergency towing hook attached to the front (or under the rear) of the vehicle.

Use extreme caution when towing the vehicle. A driver must be in the vehicle to steer it and operate the brakes. Towing in this manner may be done only on hard-surfaced roads for a short distance and at low speeds. Also, the wheels, axles, power train, steering and brakes must all be in good condition.

- Do not use the tow hooks to pull a vehicle out of mud, sand or other conditions from which the vehicle cannot be driven out under its own power.
- Avoid towing a vehicle heavier than the vehicle doing the towing.
- The drivers of both vehicles should communicate with each other frequently.

- Before emergency towing, check that the hook is not broken or damaged.
- Fasten the towing cable or chain securely to the hook.
- Do not jerk the hook. Apply steady and even force.
- To avoid damaging the hook, do not pull from the side or at a vertical angle. Always pull straight ahead.

**WARNING**

Use extreme caution when towing the vehicle.

- Avoid sudden starts or erratic driving maneuvers which would place excessive stress on the emergency towing hook and towing cable or chain. The hook and towing cable or chain may break and cause serious injury or damage.
- If the disabled vehicle cannot be moved, do not forcibly continue the towing. Contact an authorized HYUNDAI dealer or a commercial tow truck service for assistance.
- Tow the vehicle as straight ahead as possible.
- Keep away from the vehicle during towing.
Emergency towing precautions

- Turn the ignition switch to ACC so the steering wheel isn’t locked.
- Place the transaxle shift lever in N (Neutral).
- Release the parking brake.
- Press the brake pedal with more force than normal since you will have reduced brake performance.
- More steering effort will be required because the power steering system will be disabled.
- If you are driving down a long hill, the brakes may overheat and brake performance will be reduced. Stop often and let the brakes cool off.

⚠️ CAUTION - Automatic transaxle

- If the car is being towed with all four wheels on the ground, it can be towed only from the front. Be sure that the transaxle is in neutral. Be sure the steering is unlocked by placing the ignition switch in the ACC position. A driver must be in the towed vehicle to operate the steering and brakes.
- To avoid serious damage to the automatic transaxle, limit the vehicle speed to 10 mph (15 km/h) and drive less than 1 mile (1.5 km) when towing.
- Before towing, check under your vehicle for leaking automatic transaxle fluid. If the automatic transaxle fluid is leaking, a flatbed equipment or towing dolly must be used.

ENGINE COMPARTMENT

Gasoline Engine (Theta II 2.4L) - GDI

1. Engine coolant reservoir
2. Engine oil filler cap
3. Brake fluid reservoir
4. Air cleaner
5. Fuse box
6. Negative battery terminal
7. Positive battery terminal
8. Radiator cap
9. Engine oil dipstick
10. Windshield washer fluid reservoir

Gasoline Engine (Theta II 2.0L) - T-GDI

* The actual engine room in the vehicle may differ from the illustration.
MAINTENANCE SERVICES

You should exercise the utmost care to prevent damage to your vehicle and injury to yourself whenever performing any maintenance or inspection procedures.

Should you have any doubts concerning the inspection or servicing of your vehicle, we strongly recommend that you have an authorized HYUNDAI dealer perform this work.

An authorized HYUNDAI dealer has factory-trained technicians and genuine HYUNDAI parts to service your vehicle properly. For expert advice and quality service, see an authorized HYUNDAI dealer.

Inadequate, incomplete or insufficient servicing may result in operational problems with your vehicle that could lead to vehicle damage, an accident, or personal injury.

Owner’s responsibility

* NOTICE

Maintenance Service and Record Retention are the owner's responsibility.

You should retain documents that show proper maintenance has been performed on your vehicle in accordance with the scheduled maintenance service charts shown on the following pages. You need this information to establish your compliance with the servicing and maintenance requirements of your vehicle warranties.

Detailed warranty information is provided in your Owner's Handbook & Warranty Information booklet.

Repairs and adjustments required as a result of improper maintenance or a lack of required maintenance are not covered.

We recommend you have your vehicle maintained and repaired by an authorized HYUNDAI dealer. An authorized HYUNDAI dealer meets HYUNDAI’s high service quality standards and receives technical support from HYUNDAI in order to provide you with a high level of service satisfaction.
Owner maintenance precautions

Improper or incomplete service may result in problems. This section gives instructions only for the maintenance items that are easy to perform. As explained earlier in this section, several procedures can be done only by an authorized HYUNDAI dealer with special tools.

*NOTICE*

Improper owner maintenance during the warranty period may affect warranty coverage. For details, read the separate Owner’s Handbook & Warranty Information booklet provided with the vehicle. If you're unsure about any servicing or maintenance procedure, have it done by an authorized HYUNDAI dealer.

![WARNING - Maintenance work](image)

- Performing maintenance work on a vehicle can be dangerous. You can be seriously injured while performing some maintenance procedures. If you lack sufficient knowledge and experience or the proper tools and equipment to do the work, have it done by an authorized HYUNDAI dealer.
- Working under the hood with the engine running is dangerous. It becomes even more dangerous when you wear jewelry or loose clothing. These can become entangled in moving parts and result in injury. Therefore, if you must run the engine while working under the hood, make certain that you remove all jewelry (especially rings, bracelets, watches, and necklaces) and all neckties, scarves, and similar loose clothing before getting near the engine or cooling fans.
Owner maintenance schedule

When you stop for fuel:
• Check the engine oil level.
• Check coolant level in coolant reservoir.
• Check the windshield washer fluid level.
• Look for low or under-inflated tires.

While operating your vehicle:
• Note any changes in the sound of the exhaust or any smell of exhaust fumes in the vehicle.
• Check for vibrations in the steering wheel. Notice any increased steering effort or looseness in the steering wheel, or change in its straight-ahead position.
• Notice if your vehicle constantly turns slightly or “pulls” to one side when traveling on smooth, level road.
• When stopping, listen and check for unusual sounds, pulling to one side, increased brake pedal travel or “hard-to-push” brake pedal.
• If any slipping or changes in the operation of your transaxle occurs, check the transaxle fluid level.
• Check automatic transaxle P (Park) function.
• Check parking brake.
• Check for fluid leaks under your vehicle (water dripping from the air conditioning system during or after use is normal).
At least monthly:
• Check coolant level in the engine coolant reservoir.
• Check the operation of all exterior lights, including the stoplights, turn signals and hazard warning flashers.
• Check the inflation pressures of all tires including the spare.

At least twice a year (i.e., every Spring and Fall):
• Check radiator, heater and air conditioning hoses for leaks or damage.
• Check windshield washer spray and wiper operation. Clean wiper blades with clean cloth dampened with washer fluid.
• Check headlight alignment.
• Check muffler, exhaust pipes, shields and clamps.
• Check the lap/shoulder belts for wear and function.
• Check for worn tires and loose wheel lug nuts.

At least once a year:
• Clean body and door drain holes.
• Lubricate door hinges and checks, and hood hinges.
• Lubricate door and hood locks and latches.
• Lubricate door rubber weatherstrips.
• Check the air conditioning system.
• Inspect and lubricate automatic transaxle linkage and controls.
• Clean battery and terminals.
• Check the brake fluid level.
SCHEDULED MAINTENANCE SERVICE

Follow Normal Maintenance Schedule if the vehicle is usually operated where none of the following conditions apply. If any of the following conditions apply, follow Maintenance Under Severe Usage Conditions.

- Repeated short distance driving.
- Driving in dusty conditions or sandy areas.
- Extensive use of brakes.
- Driving in areas where salt or other corrosive materials are being used.
- Driving on rough or muddy roads.
- Driving in mountainous areas.
- Extended periods of idling or low speed operation.
- Driving for a prolonged period in cold temperatures and/or extremely humid climates.
- More than 50% driving in heavy city traffic during hot weather above 90°F (32°C).

If your vehicle is operated under the above conditions, you should inspect, replace or refill more frequently than the following Normal Maintenance Schedule. After 120 months or 150,000 miles (240,000 km) continue to follow the prescribed maintenance intervals.
NORMAL MAINTENANCE SCHEDULE
The following maintenance services must be performed to ensure good emission control and performance.
Keep receipts for all vehicle emission services to protect your warranty. Where both mileage and time are shown, the frequency of service is determined by whichever occurs first.

### 7,500 miles (12,000 km) or 6 months
- Rotate tire
- Inspect battery condition
- Inspect air cleaner filter
- Inspect vacuum hose
- Replace engine oil and filter (2.4 GDI) *6
  (7,500 miles (12,000 km) or 12 months)
- Add fuel additive *1
  (7,500 miles (12,000 km) or 12 months)

### 15,000 miles (24,000 km) or 12 months
- Rotate tire
- Inspect battery condition
- Inspect air cleaner filter
- Inspect vacuum hose
- Inspect air conditioning refrigerant
- Inspect brake hoses and lines
- Inspect drive shafts and boots
- Inspect exhaust pipe and muffler
- Inspect front brake disc/pads, calipers
- Inspect propeller shaft (AWD)
- Inspect rear brake disc/pads
- Inspect steering gear box, linkage & boots/lower arm ball joint, upper arm ball joint
- Inspect suspension mounting bolts
- Replace engine oil and filter (2.4 GDI) *6
  (15,000 miles (24,000 km) or 24 months)
- Add fuel additive *1
  (15,000 miles (24,000 km) or 24 months)

* Inspect: Inspect and if necessary, adjust, correct, clean or replace.
*1: If TOP TIER Detergent Gasoline is not available, one bottle of additive is recommended. Additives are available from your authorized HYUNDAI dealer along with information on how to use them. Do not mix other additives.

** Engine oil (2.0T GDI) At first, replace at 3,000 miles (5,000 km) or 6 months, after that, every 5,000 miles (8,000 km) or 6 months.
### NORMAL MAINTENANCE SCHEDULE (CONT.)

#### 22,500 miles (36,000 km) or 18 months
- Rotate tire
- Inspect battery condition
- Inspect air cleaner filter
- Inspect vacuum hose
- Replace engine oil and filter (2.4 GDI) *
  - (22,500 miles (36,000 km) or 36 months)
- Add fuel additive *
  - (22,500 miles (36,000 km) or 36 months)

#### 30,000 miles (48,000 km) or 24 months
- Rotate tire
- Inspect battery condition
- Inspect vacuum hose
- Inspect air conditioning refrigerant
- Inspect brake hoses and lines
- Inspect drive shafts and boots
- Inspect exhaust pipe and muffler
- Inspect front brake disc/pads, calipers
- Inspect propeller shaft (AWD)
- Inspect rear brake disc/pads
- Inspect steering gear box, linkage & boots/lower arm ball joint, upper arm ball joint
- Inspect suspension mounting bolts
- Inspect brake fluid
- Inspect fuel filter *
- Inspect fuel lines, fuel hoses and connections
- Inspect fuel tank air filter (if equipped) *
- Inspect parking brake
- Inspect vapor hose and fuel filler cap, fuel tank
- Replace climate control air filter
  - (for evaporator and blower unit)
- Replace air cleaner filter
- Replace engine oil and filter (2.4 GDI) *
  - (30,000 miles (48,000 km) or 48 months)
- Add fuel additive *
  - (30,000 miles (48,000 km) or 48 months)

* Inspect: Inspect and if necessary, adjust, correct, clean or replace.
*1: If TOP TIER Detergent Gasoline is not available, one bottle of additive is recommended. Additives are available from your authorized HYUNDAI dealer along with information on how to use them. Do not mix other additives.
*2: Fuel filter & Fuel tank air filter are considered to be maintenance free but periodic inspection is recommended for this maintenance schedule depends on fuel quality. If there are some important safety matters like fuel flow restriction, surging, loss of power, hard starting problem etc, replace the fuel filter immediately regardless of maintenance schedule and consult an authorized HYUNDAI dealer for details.
*6: Engine oil (2.0TGDI) At first, replace at 3,000 miles (5,000 km) or 6 months, after that, every 5,000 miles (8,000 km) or 6 months.

NORMAL MAINTENANCE SCHEDULE (CONT.)

(Continued)

- Replace air cleaner filter
- Replace engine oil and filter (2.4 GDI) *6
  (120,000 miles (192,000 km) or 192 months)
- Replace coolant
  (First, 60,000 miles (96,000 km) or 60 months
   after that, every 30,000 miles (48,000 km) or 24 months)
- Add fuel additive *1
  (120,000 miles (192,000 km) or 192 months)

* Inspect : Inspect and if necessary, adjust, correct, clean or replace.
*1 : If TOP TIER Detergent Gasoline is not available, one bottle of additive is recommended. Additives are available from your authorized HYUNDAI dealer along with information on how to use them. Do not mix other additives.

*6 : Fuel filter & Fuel tank air filter are considered to be maintenance free but periodic inspection is recommended for this maintenance schedule depends on fuel quality. If there are some important safety matters like fuel flow restriction, surging, loss of power, hard starting problem etc, replace the fuel filter immediately regardless of maintenance schedule and consult an authorized HYUNDAI dealer for details.

*4 : Inspect for excessive tappet noise and/or engine vibration and adjust if necessary.
*5 : The drive belt should be replaced when cracks occur or tension is reduced excessively.

*6 : Engine oil (2.0 TGDI) At first, replace at 3,000 miles (5,000 km) or 6 months, after that, every 5,000 miles (8,000 km) or 6 months.

EXPLANATION OF SCHEDULED MAINTENANCE ITEMS

Engine oil and filter
The engine oil and filter should be changed at the intervals specified in the maintenance schedule. If the car is being driven in severe conditions, more frequent oil and filter changes are required.

Drive belts
Inspect all drive belts for evidence of cuts, cracks, excessive wear or oil saturation and replace if necessary. Drive belts should be checked periodically for proper tension and adjusted as necessary.

Fuel filter
A clogged filter can limit the speed at which the vehicle may be driven, damage the emission system and cause multiple issues such as hard starting. If an excessive amount of foreign matter accumulates in the fuel tank, the filter may require replacement more frequently. After installing a new filter, run the engine for several minutes, and check for leaks at the connections. Fuel filters should be installed by an authorized HYUNDAI dealer.

Fuel lines, fuel hoses and connections
Check the fuel lines, fuel hoses and connections for leakage and damage. Have an authorized HYUNDAI dealer replace any damaged or leaking parts immediately.

Vapor hose and fuel filler cap
The vapor hose and fuel filler cap should be inspected at those intervals specified in the maintenance schedule. Make sure that a new vapor hose or fuel filler cap is correctly replaced.
Vacuum crankcase ventilation hoses (if equipped)
Inspect the surface of hoses for evidence of heat and/or mechanical damage. Hard and brittle rubber, cracking, tears, cuts, abrasions, and excessive swelling indicate deterioration. Particular attention should be paid to examine those hose surfaces nearest to high heat sources, such as the exhaust manifold.
Inspect the hose routing to assure that the hoses do not come in contact with any heat source, sharp edges or moving component which might cause heat damage or mechanical wear. Inspect all hose connections, such as clamps and couplings, to make sure they are secure, and that no leaks are present. Hoses should be replaced immediately if there is any evidence of deterioration or damage.

Air cleaner filter
A Genuine HYUNDAI air cleaner filter is recommended when the filter is replaced.

Spark plugs
Make sure to install new spark plugs of the correct heat range.

Valve clearance
Inspect excessive valve noise and/or engine vibration and adjust if necessary. An authorized HYUNDAI dealer should perform the operation.

Cooling system
Check the cooling system parts, such as radiator, coolant reservoir, hoses and connections for leakage and damage. Replace any damaged parts.

Coolant
The coolant should be changed at the intervals specified in the maintenance schedule.

Automatic transaxle fluid
Automatic transaxle fluid should not be checked under normal usage conditions.
But in severe conditions, the fluid should be changed at an authorized HYUNDAI dealer in accordance to the scheduled maintenance at the beginning of this chapter.

NOTICE
Automatic transaxle fluid color is basically red.
As the vehicle is driven, the automatic transaxle fluid will begin to look darker.
It is normal condition and you should not judge the need to replace the fluid based upon the changed color.
**Maintenance**

**Brake hoses and lines**
Visually check for proper installation, chafing, cracks, deterioration and any leakage. Replace any deteriorated or damaged parts immediately.

**Brake fluid**
Check brake fluid level in the brake fluid reservoir. The level should be between “MIN” and “MAX” marks on the side of the reservoir. Use only hydraulic brake fluid conforming to DOT 3 or DOT 4 specification.

**Parking brake**
Inspect the parking brake system including the parking brake lever (or pedal) and cables.

**Brake pads, calipers and rotors**
Check the pads for excessive wear, discs for run out and wear, and calipers for fluid leakage.

**Suspension mounting bolts**
Check the suspension connections for looseness or damage. Retighten to the specified torque.

**Steering gear box, linkage & boots/lower arm ball joint**
With the vehicle stopped and engine off, check for excessive free-play in the steering wheel.
Check the linkage for bends or damage. Check the dust boots and ball joints for deterioration, cracks, or damage. Replace any damaged parts.

**Drive shafts and boots**
Check the drive shafts, boots and clamps for cracks, deterioration, or damage. Replace any damaged parts and, if necessary, repack the grease.

**Air conditioning refrigerant/compressor (if equipped)**
Check the air conditioning lines and connections for leakage and damage.

---

⚠️ **CAUTION**
The use of a non-specified fluid could result in transaxle malfunction and failure.
Use only specified automatic transaxle fluid. (Refer to “Recommended lubricants and capacities” in section 8.)
ENGINE OIL
Checking the engine oil level

1. Be sure the vehicle is on level ground.
2. Start the engine and allow it to reach normal operating temperature.
3. Turn the engine off and wait for a few minutes (about 5 minutes) for the oil to return to the oil pan.
4. Pull the dipstick out, wipe it clean, and re-insert it fully.
5. Pull the dipstick out again and check the level. The level should be between F and L.

WARNING - Radiator hose
Be very careful not to touch the radiator hose when checking or adding the engine oil as it may be hot enough to burn you.

CAUTION
• Do not overfill with engine oil. Engine damage may result.
• Do not spill engine oil, when adding or changing engine oil. If you drop the engine oil on the engine room, wipe it off immediately.

If it is near or at L, add enough oil to bring the level to F. Do not overfill.

Use a funnel to help prevent oil from being spilled on engine components.
Use only the specified engine oil. (Refer to “Recommended lubricants and capacities” in section 8.)

**Changing the engine oil and filter**

Have engine oil and filter changed by an authorized HYUNDAI dealer according to the Maintenance Schedule at the beginning of this section.

**CALIFORNIA PROPOSITION 65 WARNING**

Engine oil contains chemicals known to the State of California to cause cancer, birth defects, and reproductive harm.

Used engine oil may cause irritation or cancer of the skin if left in contact with the skin for prolonged periods of time. Used engine oil contains chemicals that have caused cancer in laboratory animals. Always protect your skin by washing your hands thoroughly with soap and warm water as soon as possible after handling used oil.
The high-pressure cooling system has a reservoir filled with year-round antifreeze coolant. The reservoir is filled at the factory. Check the antifreeze protection and coolant concentration level at least once a year, at the beginning of the winter season, and before traveling to a colder climate.

**ENGINE COOLANT**

**Checking the coolant level**

(Continued)

- Turn the engine off and wait until it cools down. Use extreme care when removing the radiator cap. Wrap a thick towel around it, and turn it counterclockwise slowly to the first stop. Step back while the pressure is released from the cooling system.

When you are sure all the pressure has been released, press down on the cap, using a thick towel, and continue turning counterclockwise to remove it.

- Even if the engine is not operating, do not remove the radiator cap or the drain plug while the engine and radiator are hot. Hot coolant and steam may still blow out under pressure, causing serious injury.

**WARNING**

- Never attempt to remove the radiator cap while the engine is operating or hot. Doing so might lead to cooling system and engine damage and could result in serious personal injury from escaping hot coolant or steam.

(Continued)

**WARNING**

- The electric motor (cooling fan) is controlled by engine coolant temperature, refrigerant pressure and vehicle speed. It may sometimes operate even when the engine is not running. Use extreme caution when working near the blades of the cooling fan so that you are not injured by a rotating fan blade. As the engine coolant temperature decreases, the electric motor will automatically shut off. This is a normal condition.

If your vehicle is if equipped with GDI, the electric motor (cooling fan) may operate until you disconnect the negative battery cable.
Check the condition and connections of all cooling system hoses and heater hoses. Replace any swollen or deteriorated hoses.

The coolant level should be filled between F (MAX) and L (MIN) marks on the side of the coolant reservoir when the engine is cool.

If the coolant level is low, add enough deionized water. Bring the level to F (MAX), but do not overfill. If frequent coolant refill is required, see an authorized HYUNDAI dealer for a cooling system inspection.

**Recommended engine coolant**

- When adding coolant, use only deionized water for your vehicle and never mix hard water in the coolant filled at the factory. An improper coolant mixture can result in serious malfunction or engine damage.
- The engine in your vehicle has aluminum engine parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.
- **DO NOT USE** alcohol or methanol coolant or mix them with the specified coolant.
- Do not use a solution that contains more than 60% antifreeze or less than 35% antifreeze, which would reduce the effectiveness of the solution.

For mixture percentage, refer to the following table.

<table>
<thead>
<tr>
<th>Ambient Temperature</th>
<th>Mixture Percentage (volume)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Antifreeze</td>
</tr>
<tr>
<td>5°F (-15°C)</td>

<td>40</td>
</tr>
<tr>
<td>-31°F (-35°C)</td>
<td>50</td>
</tr>
<tr>
<td>-49°F (-45°C)</td>
<td>60</td>
</tr>
</tbody>
</table>
Changing the coolant

Have coolant changed by an authorized HYUNDAI dealer according to the Maintenance Schedule at the beginning of this section.

**WARNING**

**Radiator cap**

Do not remove the radiator cap when the engine and radiator are hot. Scalding hot coolant and steam may blow out under pressure causing serious injury.

**CAUTION**

*Put a thick cloth or fabric around the radiator cap before refilling the coolant in order to prevent the coolant from overflowing into engine parts such as generator.*

**WARNING - Coolant**

- Do not use radiator coolant or antifreeze in the washer fluid reservoir.
- Radiator coolant can severely obscure visibility when sprayed on the windshield and may cause loss of vehicle control or damage to paint and body trim.
BRAKE FLUID

Checking the brake fluid level

Check the fluid level in the reservoir periodically. The fluid level should be between MAX and MIN marks on the side of the reservoir.

Before removing the reservoir cap and adding brake fluid, clean the area around the reservoir cap thoroughly to prevent brake fluid contamination.

If the level is low, add fluid to the MAX level. The level will fall with accumulated mileage. This is a normal condition associated with the wear of the brake linings. If the fluid level is excessively low, have the brake system checked by an authorized HYUNDAI dealer.

Use only the specified brake fluid. (Refer to “Recommended lubricants and capacities” in section 8.)

Never mix different types of fluid.

WARNING - Loss of brake fluid

In the event the brake system requires frequent additions of fluid, the vehicle should be inspected by an authorized HYUNDAI dealer.
**WARNING - Brake fluid**

When changing and adding brake fluid, handle it carefully. Do not let it come in contact with your eyes. If brake fluid should come in contact with your eyes, immediately flush them with a large quantity of fresh tap water. Have your eyes examined by a doctor as soon as possible.

**CAUTION**

Do not allow brake fluid to contact the vehicle's body paint, as paint damage will result. Brake fluid, which has been exposed to open air for an extended time should never be used as its quality cannot be guaranteed. It should be disposed of properly. Do not put in the wrong type of fluid. A few drops of mineral-based oil, such as engine oil, in your brake system can damage brake system parts.
WASHER FLUID
Checking the washer fluid level

The reservoir is translucent so that you can check the level with a quick visual inspection. Check the fluid level in the washer fluid reservoir and add fluid if necessary. Plain water may be used if washer fluid is not available. However, use washer solvent with antifreeze characteristics in cold climates to prevent freezing.

WARNING - Coolant

- Do not use radiator coolant or antifreeze in the washer fluid reservoir.
- Radiator coolant can severely obscure visibility when sprayed on the windshield and may cause loss of vehicle control or damage to paint and body trim.
- Windshield washer fluid agents contain some amounts of alcohol and can be flammable under certain circumstances. Do not allow sparks or flame to contact the washer fluid or the washer fluid reservoir. Damage to the vehicle or occupants could occur.
- Windshield washer fluid is poisonous to humans and animals. Do not drink and avoid contacting windshield washer fluid. Serious injury or death could occur.

PARKING BRAKE
Checking the parking brake

Check whether the stroke is within specification when the parking brake pedal is depressed with 66 lb (30 kg, 294 N) of force. Also, the parking brake alone should securely hold the vehicle on a fairly steep grade. If the stroke is more or less than specified, have the parking brake adjusted by an authorized HYUNDAI dealer.

Stroke : 8~9 notch
AIR CLEANER
Filter replacement

It must be replaced when necessary, and should not be washed.
You can clean the filter when inspecting the air cleaner element.
Clean the filter by using compressed air.

1. Loosen the air cleaner cover attaching clips and open the cover.
2. Wipe the inside of the air cleaner.
3. Lift the air cleaner cover and pull the air cleaner filter cover.
4. Pull the air cleaner to replace.
5. Lock the cover with the cover attaching clips.
6. Verify that the air cleaner cover is properly attached at all four corners and sealing against air cleaner.
Replace the filter according to the Maintenance Schedule. 
*If the vehicle is operated in extremely dusty or sandy areas, replace the element more often than the usual recommended intervals. (Refer to “Maintenance under severe usage conditions” in this section.)*

**CAUTION**

- **Do not drive with the air cleaner removed; this will result in excessive engine wear.**
- **When removing the air cleaner filter, be careful that dust or dirt does not enter the air intake, or damage may result.**
- **Use a HYUNDAI genuine part. Use of nongenuine part could damage the air flow sensor.**
CLIMATE CONTROL AIR FILTER

Filter inspection
If the vehicle is operated in the severely air-polluted cities or on dusty rough roads for a long period, it should be inspected more frequently and replaced earlier. When you, the owner, replace the climate control air filter, replace it performing the following procedure, and be careful to avoid damaging other components.
Replace the filter according to the maintenance Schedule.

Filter replacement

1. Open the glove box and remove the support strap (1).

2. With the glove box open, remove the stoppers on both sides.
3. Remove the climate control air filter case by pulling out both sides of the cover.

4. Replace the climate control air filter.

5. Reassemble in the reverse order of disassembly.

**NOTICE**

Install a new climate control air filter in the correct direction with the arrow symbol (↓) facing downwards. Otherwise, the climate control effects may decrease, possibly with a noise.
**WIPER BLADES**

**Blade inspection**

Contamination of either the windshield or the wiper blades with foreign matter can reduce the effectiveness of the windshield wipers. Common sources of contamination are insects, tree sap, and hot wax treatments used by some commercial car washes. If the blades are not wiping properly, clean both the window and the blades with a good cleaner or mild detergent, and rinse thoroughly with clean water.

**NOTICE**

Commercial hot waxes applied by automatic car washes have been known to make the windshield difficult to clean.

**Blade replacement**

When the wipers no longer clean adequately, the blades may be worn or cracked, and require replacement.

⚠️ **CAUTION**

*To prevent damage to the wiper arms or other components, do not attempt to move the wipers manually.*

⚠️ **CAUTION**

*To prevent damage to the wiper blades, do not use gasoline, kerosene, paint thinner, or other solvents on or near them.*

⚠️ **CAUTION**

*The use of a non-specified wiper blade could result in wiper malfunction and failure.*
Front windshield wiper blade

1. Raise the wiper arm and turn the wiper blade assembly to expose the plastic locking clip.

2. Compress the clip and slide the blade assembly downward.

3. Lift it off the arm.

4. Install the blade assembly in the reverse order of removal.

⚠️ CAUTION
Do not allow the wiper arm to fall against the windshield, since it may chip or crack the windshield.
Rear window wiper blade

1. Raise the wiper arm and pull out the wiper blade assembly.

2. Install the new blade assembly by inserting the center part into the slot in the wiper arm until it clicks into place.

3. Make sure the blade assembly is installed firmly by trying to pull it slightly.

To prevent damage to the wiper arms or other components, have an authorized HYUNDAI dealer replace the wiper blade.
BATTERY
For best battery service

- Keep the battery securely mounted.
- Keep the battery top clean and dry.
- Keep the terminals and connections clean, tight, and coated with petroleum jelly or terminal grease.
- Rinse any spilled electrolyte from the battery immediately with a solution of water and baking soda.
- If the vehicle is not going to be used for an extended time, disconnect the battery cables.

WARNING - Battery dangers

Always read the following instructions carefully when handling a battery.

Keep lighted cigarettes and all other flames or sparks away from the battery.

Hydrogen, a highly combustible gas, is always present in battery cells and may explode if ignited.

Keep batteries out of the reach of children because batteries contain highly corrosive SULFURIC ACID. Do not allow battery acid to contact your skin, eyes, clothing or paint finish.

(Continued)

If any electrolyte gets into your eyes, flush your eyes with clean water for at least 15 minutes and get immediate medical attention.

If electrolyte gets on your skin, thoroughly wash the contacted area. If you feel a pain or a burning sensation, get medical attention immediately.

Wear eye protection when charging or working near a battery. Always provide ventilation when working in an enclosed space.

An inappropriately disposed battery can be harmful to the environment and human health. Dispose the battery according to your local law(s) or regulation.
Battery recharging
Your vehicle has a maintenance-free, calcium-based battery.
- If the battery becomes discharged in a short time (because, for example, the headlights or interior lights were left on while the vehicle was not in use), recharge it by slow charging (trickle) for 10 hours.
- If the battery gradually discharges because of high electric load while the vehicle is being used, recharge it at 20-30A for two hours.

(Continued)
- When lifting a plastic-cased battery, excessive pressure on the case may cause battery acid to leak, resulting in personal injury. Lift with a battery carrier or with your hands on opposite corners.
- Never attempt to recharge the battery when the battery cables are connected.
- The electrical ignition system works with high voltage. Never touch these components with the engine running or the ignition switched on.
Failure to follow the above warnings can result in serious bodily injury or death.

⚠️ CALIFORNIA PROPOSITION 65 WARNING
Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer, birth defects, and reproductive harm. Batteries also contain other chemicals known to the State of California to cause cancer. Wash hands after handling.

⚠️ CAUTION
- Always charge the battery fully to prevent battery case damage in low temperature area.
- If you connect unauthorized electronic devices to the battery, the battery may discharge. Never use unauthorized devices.
Maintenance

**WARNING - Recharging battery**

When recharging the battery, observe the following precautions:

- The battery must be removed from the vehicle and placed in an area with good ventilation.
- Do not allow cigarettes, sparks, or flame near the battery.
- Watch the battery during charging, and stop or reduce the charging rate if the battery cells begin gassing (boiling) violently or if the temperature of the electrolyte of any cell exceeds 120°F (49°C).
- Wear eye protection when checking the battery during charging.

(Continued)

(Continued)

- Disconnect the battery charger in the following order.
  1. Turn off the battery charger main switch.
  2. Unhook the negative clamp from the negative battery terminal.
  3. Unhook the positive clamp from the positive battery terminal.
- Before performing maintenance or recharging the battery, turn off all accessories and stop the engine.
- The negative battery cable must be removed first and installed last when the battery is disconnected.

**Reset items**

Items should be reset after the battery has been discharged or the battery has been disconnected.

- Auto up/down window (See section 4)
- Sunroof (See section 4)
- Trip computer (See section 4)
- Climate control system (See section 4)
- Clock (See section 4)
- Audio (See section 4)
TIRES AND WHEELS

Tire care

For proper maintenance, safety, and maximum fuel economy, you must always maintain recommended tire inflation pressures and stay within the load limits and weight distribution recommended for your vehicle.

Recommended cold tire inflation pressures

All tire pressures (including the spare) should be checked when the tires are cold. “Cold Tires” means the vehicle has not been driven for at least three hours or driven less than 1 mile (1.6 km).

Recommended pressures must be maintained for the best ride, top vehicle handling, and minimum tire wear.

For recommended inflation pressure refer to “Tire and wheels” in section 8.

CAUTION

- Underinflation also results in excessive wear, poor handling, and reduced fuel economy. Wheel deformation also is possible. Keep your tire pressures at the proper levels. If a tire frequently needs refilling, have it checked by an authorized HYUNDAI dealer.

- Overinflation produces a harsh ride, excessive wear at the center of the tire tread, and a greater possibility of damage from road hazards.

WARNING - Tire under-inflation

Severe underinflation (10 psi (70 kPa) or more) can lead to severe heat build-up, causing blowouts, tread separation and other tire failures that can result in the loss of vehicle control leading to severe injury or death. This risk is much higher on hot days and when driving for long periods at high speeds.
**CAUTION**

- Warm tires normally exceed recommended cold tire pressures by 4 to 6 psi (28 to 41 kPa). Do not release air from warm tires to adjust the pressure or the tires will be underinflated.
- Be sure to reinstall the tire inflation valve caps. Without the valve cap, dirt or moisture could get into the valve core and cause air leakage. If a valve cap is missing, install a new one as soon as possible.

**CAUTION - Tire pressure**

Always observe the following:

- Check tire pressure when the tires are cold. (After vehicle has been parked for at least three hours or hasn't been driven more than 1 mile (1.6 km) since startup.)
- Check the pressure of your spare tire each time you check the pressure of other tires.
- Never overload your vehicle. Be careful not to overload a vehicle luggage rack if your vehicle is equipped with one.
- Worn, old tires can cause accidents. If your tread is badly worn, or if your tires have been damaged, replace them.

**WARNING - Tire inflation**

Overinflation or underinflation can reduce tire life, adversely affect vehicle handling, and lead to sudden tire failure. This could result in loss of vehicle control and potential injury.

**Checking tire inflation pressure**

Check your tires once a month or more.
Also, check the tire pressure of the spare tire.

**How to check**

Use a good quality gage to check tire pressure. You can not tell if your tires are properly inflated simply by looking at them. Radial tires may look properly inflated even when they're underinflated.

Check the tire's inflation pressure when the tires are cold. - "Cold" means your vehicle has been sitting for at least three hours or driven no more than 1 mile (1.6 km).
Remove the valve cap from the tire valve stem. Press the tire gauge firmly onto the valve to get a pressure measurement. If the cold tire inflation pressure matches the recommended pressure on the tire and loading information label, no further adjustment is necessary. If the pressure is low, add air until you reach the recommended amount.

If you overfill the tire, release air by pushing on the metal stem in the center of the tire valve. Recheck the tire pressure with the tire gauge. Be sure to put the valve caps back on the valve stems. They help prevent leaks by keeping out dirt and moisture.

**WARNING**

- Inspect your tires frequently for proper inflation as well as wear and damage. Always use a tire pressure gauge.
- Tires with too much or too little pressure wear unevenly causing poor handling, loss of vehicle control, and sudden tire failure leading to accidents, injuries, and even death. The recommended cold tire pressure for your vehicle can be found in this manual and on the tire label located on the driver's side center pillar.
- Worn tires can cause accidents. Replace tires that are worn, show uneven wear, or are damaged.
- Remember to check the pressure of your spare tire. HYUNDAI recommends that you check the spare every time you check the pressure of the other tires on your vehicle.

**Tire rotation**

To equalize tread wear, it is recommended that the tires be rotated every 7,500 miles (12,000 km) or sooner if irregular wear develops.

During rotation, check the tires for correct balance.

When rotating tires, check for uneven wear and damage. Abnormal wear is usually caused by incorrect tire pressure, improper wheel alignment, out-of-balance wheels, severe braking or severe cornering. Look for bumps or bulges in the tread or side of tire. Replace the tire if you find either of these conditions. Replace the tire if fabric or cord is visible. After rotation, be sure to bring the front and rear tire pressures to specification and check lug nut tightness.

Refer to “Tire and wheels” in section 8.
Disc brake pads should be inspected for wear whenever tires are rotated.

NOTICE
Rotate radial tires that have an asymmetric tread pattern only from front to rear and not from right to left.

WARNING
- Do not use the compact spare tire for tire rotation.
- Do not mix bias ply and radial ply tires under any circumstances. This may cause unusual handling characteristics that could result in death, severe injury, or property damage.

Wheel alignment and tire balance
The wheels on your vehicle were aligned and balanced carefully at the factory to give you the longest tire life and best overall performance. In most cases, you will not need to have your wheels aligned again. However, if you notice unusual tire wear or your vehicle pulling one way or the other, the alignment may need to be reset.
If you notice your vehicle vibrating when driving on a smooth road, your wheels may need to be rebalanced.

CAUTION
Improper wheel weights can damage your vehicle’s aluminum wheels. Use only approved wheel weights.
Tire replacement

If the tire is worn evenly, a tread wear indicator will appear as a solid band across the tread. This shows there is less than 1/16 in. (1.6 mm) of tread left on the tire. Replace the tire when this happens.

Do not wait for the band to appear across the entire tread before replacing the tire.

WARNING - Replacing tires

- Driving on worn-out tires is very hazardous and will reduce braking effectiveness, steering accuracy, and traction.
- Your vehicle is equipped with tires designed to provide for safe ride and handling capability. Do not use a size and type of tire and wheel that is different from the one that is originally installed on your vehicle. It can affect the safety and performance of your vehicle, which could lead to handling failure or rollover and serious injury. When replacing the tires, be sure to equip all four tires with the tire and wheel of the same size, type, tread, brand and load-carrying capacity.

(Continued)

- The use of any other tire size or type may seriously affect ride, handling, ground clearance, stopping distance, body to tire clearance, snow tire clearance, and speedometer reliability.
- It is best to replace all four tires at the same time. If that is not possible, or necessary, then replace the two front or two rear tires as a pair. Replacing just one tire can seriously affect your vehicle’s handling.
- The ABS works by comparing the speed of the wheels. Tire size can affect wheel speed. When replacing tires, all 4 tires must use the same size originally supplied with the vehicle. Using tires of a different size can cause the ABS (Anti-lock Brake System) and ESC (Electronic Stability Control), to work irregularly.
Compact spare tire replacement
A compact spare tire has a shorter tread life than a regular size tire. Replace it when you can see the tread wear indicator bars on the tire. The replacement compact spare tire should be the same size and design tire as the one provided with your new vehicle and should be mounted on the same compact spare tire wheel. The compact spare tire is not designed to be mounted on a regular size wheel, and the compact spare tire wheel is not designed for mounting a regular size tire.

Wheel replacement
When replacing the metal wheels for any reason, make sure the new wheels are equivalent to the original factory units in diameter, rim width and offset.

WARNING
A wheel that is not the correct size may adversely affect wheel and bearing life, braking and stopping abilities, handling characteristics, ground clearance, body-to-tire clearance, snow chain clearance, speedometer and odometer calibration, headlight aim and bumper height.

Tire traction
Tire traction can be reduced if you drive on worn tires, tires that are improperly inflated or on slippery road surfaces. Tires should be replaced when tread wear indicators appear. To reduce the possibility of losing control, slow down whenever there is rain, snow or ice on the road.
Tire maintenance

In addition to proper inflation, correct wheel alignment helps to decrease tire wear. If you find a tire is worn unevenly, have your dealer check the wheel alignment.

When you have new tires installed, make sure they are balanced. This will increase vehicle ride comfort and tire life. Additionally, a tire should always be rebalanced if it is removed from the wheel.

Tire sidewall labeling

1. Manufacturer or brand name
Manufacturer or Brand name is shown.

2. Tire size designation
A tire’s sidewall is marked with a tire size designation. You will need this information when selecting replacement tires for your car. The following explains what the letters and numbers in the tire size designation mean.

This information identifies and describes the fundamental characteristics of the tire and also provides the tire identification number (TIN) for safety standard certification. The TIN can be used to identify the tire in case of a recall.
Example tire size designation:
(These numbers are provided as an example only; your tire size designator could vary depending on your vehicle.)

(P)235/65R17 102H

(P) - Applicable vehicle type (tires marked with the prefix "P" are intended for use on passenger vehicles or light trucks; however, not all tires have this marking).
235 - Tire width in millimeters.
65 - Aspect ratio. The tire's section height as a percentage of its width.
R - Tire construction code (Radial).
17 - Rim diameter in inches.
102 - Load Index, a numerical code associated with the maximum load the tire can carry.
H - Speed Rating Symbol. See the speed rating chart in this section for additional information.

Wheel size designation
Wheels are also marked with important information that you need if you ever have to replace one. The following explains what the letters and numbers in the wheel size designation mean.

Example wheel size designation:
7.0JX17

7.0 - Rim width in inches.
J - Rim contour designation.
17 - Rim diameter in inches.

Tire speed ratings
The chart below lists many of the different speed ratings currently being used for passenger car tires. The speed rating is part of the tire size designation on the sidewall of the tire. This symbol corresponds to that tire's designed maximum safe operating speed.

<table>
<thead>
<tr>
<th>Speed Rating Symbol</th>
<th>Maximum Speed</th>
</tr>
</thead>
<tbody>
<tr>
<td>S</td>
<td>112 mph (180 km/h)</td>
</tr>
<tr>
<td>T</td>
<td>118 mph (190 km/h)</td>
</tr>
<tr>
<td>H</td>
<td>130 mph (210 km/h)</td>
</tr>
<tr>
<td>V</td>
<td>149 mph (240 km/h)</td>
</tr>
<tr>
<td>Z</td>
<td>Above 149 mph (240 km/h)</td>
</tr>
</tbody>
</table>
3. Checking tire life
(TIN : Tire Identification Number)

Any tires that are over 6 years old, based on the manufacturing date (including the spare tire) should be replaced by new ones. You can find the manufacturing date on the tire sidewall (possibly on the inside of the wheel), displaying the DOT Code. The DOT Code is a series of numbers on a tire consisting of numbers and English letters. The manufacturing date is designated by the last four digits (characters) of the DOT code.

DOT : XXXX XXXX 0000
The front part of the DOT means a plant code number, tire size and tread pattern and the last four numbers indicate week and year manufactured.

For example:
DOT XXXX XXXX 1616 represents that the tire was produced in the 16th week of 2016.

4. Tire ply composition and material

The number of layers or plies of rubber-coated fabric in the tire. Tire manufacturers also must indicate the materials in the tire, which include steel, nylon, polyester, and others. The letter "R" means radial ply construction; the letter "D" means diagonal or bias ply construction; and the letter "B" means belted-bias ply construction.

5. Maximum permissible inflation pressure

This number is the greatest amount of air pressure that should be put in the tire. Do not exceed the maximum permissible inflation pressure. Refer to the Tire and Loading Information label for recommended inflation pressure.

WARNING - Tire age
Tires degrade over time, even when they are not being used. Regardless of the remaining tread, it is recommended that tires generally be replaced after six (6) years of normal service. Heat caused by hot climates or frequent high loading conditions can accelerate the aging process. Failure to follow this Warning can result in sudden tire failure, which could lead to a loss of control and an accident involving serious injury or death.
6. **Maximum load rating**

This number indicates the maximum load in kilograms and pounds that can be carried by the tire. When replacing the tires on the vehicle, always use a tire that has the same load rating as the factory installed tire.

7. **Uniform tire quality grading**

Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width.

For example:

- TREADWEAR 200
- TRACTION AA
- TEMPERATURE A

**Tread wear**

The tread wear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one-and-a-half times (1½) as well on the government course as a tire graded 100.

The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm because of variations in driving habits, service practices and differences in road characteristics and climate.

These grades are molded on the side-walls of passenger vehicle tires. The tires available as standard or optional equipment on your vehicle may vary with respect to grade.

**Traction - AA, A, B & C**

The traction grades, from highest to lowest, are AA, A, B and C. Those grades represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

**WARNING**

The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

**Temperature - A, B & C**

The temperature grades are A (the highest), B and C representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel.
Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The Grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard NO. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by the law.

\[ \text{WARNING - Tire temperature} \]

The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat build-up and possible sudden tire failure. This can cause loss of vehicle control and serious injury or death.

**Tire terminology and definitions**

**Air Pressure:** The amount of air inside the tire pressing outward on the tire. Air pressure is expressed in pounds per square inch (psi) or kilopascal (kPa).

**Accessory Weight:** This means the combined weight of optional accessories. Some examples of optional accessories are, automatic transaxle power seats, and air conditioning.

**Aspect Ratio:** The relationship of a tire's height to its width.

**Belt:** A rubber coated layer of cords that is located between the plies and the tread. Cords may be made from steel or other reinforcing materials.

**Bead:** The tire bead contains steel wires wrapped by steel cords that hold the tire onto the rim.

**Bias Ply Tire:** A pneumatic tire in which the plies are laid at alternate angles less than 90 degrees to the centerline of the tread.
Cold Tire Pressure: The amount of air pressure in a tire, measured in pounds per square inch (psi) or kilopascals (kPa) before a tire has built up heat from driving.

Curb Weight: This means the weight of a motor vehicle with standard and optional equipment including the maximum capacity of fuel, oil and coolant, but without passengers and cargo.

DOT Markings: A code molded into the sidewall of a tire signifying that the tire is in compliance with the U.S. Department of Transportation motor vehicle safety standards. The DOT code includes the Tire Identification Number (TIN), an alphanumeric designator which can also identify the tire manufacturer, production plant, brand and date of production.

GVWR: Gross Vehicle Weight Rating
GAWR FRT: Gross Axle Weight Rating for the Front Axle.
GAWR RR: Gross Axle Weight Rating for the Rear axle.

Intended Outboard Sidewall: The side of an asymmetrical tire, that must always face outward when mounted on a vehicle.

Kilopascal (kPa): The metric unit for air pressure.

Light truck (LT) tire: A tire designated by its manufacturer as primarily intended for use on lightweight trucks or multipurpose passenger vehicles.

Load ratings: The maximum load that a tire is rated to carry for a given inflation pressure.

Load Index: An assigned number ranging from 1 to 279 that corresponds to the load carrying capacity of a tire.

Maximum Inflation Pressure: The maximum air pressure to which a cold tire may be inflated. The maximum air pressure is molded onto the sidewall.

Maximum Load Rating: The load rating for a tire at the maximum permissible inflation pressure for that tire.

Maximum Loaded Vehicle Weight: The sum of curb weight; accessory weight; vehicle capacity weight; and production options weight.

Normal Occupant Weight: The number of occupants a vehicle is designed to seat multiplied by 150 pounds (68 kg).

Occupant Distribution: Designated seating positions.

Outward Facing Sidewall: The side of an asymmetrical tire that has a particular side that faces outward when mounted on a vehicle. The outward facing sidewall bears white lettering or bears manufacturer, brand, and/or model name molding that is higher or deeper than the same moldings on the inner facing sidewall.

Passenger (P-Metric) Tire: A tire used on passenger cars and some light duty trucks and multipurpose vehicles.

Ply: A layer of rubber-coated parallel cords.

Pneumatic tire: A mechanical device made of rubber, chemicals, fabric and steel or other materials, that, when mounted on an automotive wheel, provides the traction and contains the gas or fluid that sustains the load.
Production options weight: The combined weight of installed regular production options weighing over 5 lb. (2.3 kg) in excess of the standard items which they replace, not previously considered in curb weight or accessory weight, including heavy duty brakes, ride levelers, roof rack, heavy duty battery, and special trim.

Recommended Inflation Pressure: Vehicle manufacturer's recommended tire inflation pressure and shown on the tire placard.

Radial Ply Tire: A pneumatic tire in which the ply cords that extend to the beads are laid at 90 degrees to the centerline of the tread.

Rim: A metal support for a tire and upon which the tire beads are seated.

Sidewall: The portion of a tire between the tread and the bead.

Speed Rating: An alphanumeric code assigned to a tire indicating the maximum speed at which a tire can operate.

Traction: The friction between the tire and the road surface. The amount of grip provided.

Tread: The portion of a tire that comes into contact with the road.

Treadwear Indicators: Narrow bands, sometimes called "wear bars," that show across the tread of a tire when only 2/32 inch of tread remains.

UTQGS: Uniform Tire Quality Grading Standards, a tire information system that provides consumers with ratings for a tire's traction, temperature and treadwear. Ratings are determined by tire manufacturers using government testing procedures. The ratings are molded into the sidewall of the tire.

Vehicle Capacity Weight: The number of designated seating positions multiplied by 150 lbs. (68 kg) plus the rated cargo and luggage load.

Vehicle Maximum Load on the Tire: Load on an individual tire due to curb and accessory weight plus maximum occupant and cargo weight.
All season tires

HYUNDAI specifies all season tires on some models to provide good performance for use all year round, including snowy and icy road conditions. All season tires are identified by ALL SEASON and/or M+S (Mud and Snow) on the tire sidewall. Snow tires have better snow traction than all season tires and may be more appropriate in some areas.

Summer tires

HYUNDAI specifies summer tires on some models to provide superior performance on dry roads. Summer tire performance is substantially reduced in snow and ice. Summer tires do not have the tire traction rating M+S (Mud and Snow) on the tire side wall. If you plan to operate your vehicle in snowy or icy conditions, HYUNDAI recommends the use of snow tires or all season tires on all four wheels.

Snow tires

If you equip your car with snow tires, they should be the same size and have the same load capacity as the original tires. Snow tires should be installed on all four wheels; otherwise, poor handling may result. Snow tires should carry 4 psi (28 kPa) more air pressure than the pressure recommended for the standard tires on the tire label on the driver's side of the center pillar, or up to the maximum pressure shown on the tire sidewall, whichever is less. Do not drive faster than 75 mph (120 km/h) when your car is equipped with snow tires.

Tire chains

Tire chains, if necessary, should be installed on the drive wheels as follows.
2WD: Front wheels
AWD: All four wheels

If a full set of chains is not available for an AWD vehicle, chains may be installed on the front wheels only. Be sure that the chains are installed in accordance with the manufacturer's instructions. To minimize tire and chain wear, do not continue to use tire chains when they are no longer needed.
Radial-ply tires

Radial-ply tires provide improved tread life, road hazard resistance and smoother high speed ride. The radial-ply tires used on this vehicle are of belted construction, and are selected to complement the ride and handling characteristics of your vehicle. Radial-ply tires have the same load carrying capacity, as bias-ply or bias belted tires of the same size, and use the same recommended inflation pressure. Mixing of radial-ply tires with bias-ply or bias belted tires is not recommended. Any combinations of radial-ply and bias-ply or bias belted tires when used on the same vehicle will seriously deteriorate vehicle handling. The best rule to follow is: Identical radial-ply tires should always be used as a set of four.

Longer wearing tires can be more susceptible to irregular tread wear. It is very important to follow the tire rotation interval shown in this section to achieve the tread life potential of these tires. Cuts and punctures in radial-ply tires are repairable only in the tread area, because of sidewall flexing. Consult your tire dealer for radial-ply tire repairs.

⚠️ WARNING - Snow or ice

- When driving on roads covered with snow or ice, drive at less than 20 mph (30 km/h).
- Use the SAE "S" class or wire chains.
- If you hear noise caused by chains contacting the body, retighten the chain to avoid contact with the vehicle body.
- To prevent body damage, retighten the chains after driving 0.3~0.6 miles (0.5~1.0 km).
- Do not use tire chains on vehicles equipped with aluminum wheels. In unavoidable circumstance, use a wire type chain.
- Use wire chains less than 0.59 inches (15mm) to prevent damage to the chain’s connection.
Low aspect ratio tire (if equipped)

Low aspect ratio tires, whose aspect ratio is lower than 50, are provided for sporty looks. Because the low aspect ratio tires are optimized for handling and braking, it may be more uncomfortable to ride in and there is more noise compare with normal tires.

⚠️ CAUTION

Because the sidewall of the low aspect ratio tire is shorter than the normal, the wheel and tire of the low aspect ratio tire is easier to be damaged. So, follow the instructions below.

- When driving on a rough road or off road, drive cautiously because tires and wheels may be damaged. And after driving, inspect tires and wheels.
- When passing over a pothole, speed bump, manhole, or curb stone, drive slowly so that the tires and wheels are not damaged.
- If the tire is subjected to a severe impact, have the tire and wheel inspected by an authorized HYUNDAI dealer.
- To prevent damage to the tire, inspect the tire condition and pressure every 1,800 miles (3,000km).

⚠️ CAUTION

- It is not easy to recognize the tire damage with your own eyes. But if there is the slightest hint of tire damage, even though you cannot see the tire damage with your own eyes, have the tire checked or replaced because the tire damage may cause air leakage from the tire.
- If the tire is damaged by driving on a rough road, off road, pothole, manhole, or curb stone, it will not be covered by the warranty.
- You can find out the tire information on the tire sidewall.
A vehicle’s electrical system is protected from electrical overload damage by fuses.

This vehicle has 2 fuse panels, one located in the driver’s side panel bolster, the other in the engine compartment near the battery.

If any of your vehicle’s lights, accessories, or controls do not work, check the appropriate circuit fuse. If a fuse has blown, the element inside the fuse will be melted.

If the electrical system does not work, first check the driver’s side fuse panel.

Always replace a blown fuse with one of the same rating.

Before replacing an open fuse, disconnect the negative battery cable.

If the replacement fuse blows, this indicates an electrical problem. Avoid using the system involved and immediately consult an authorized HYUNDAI dealer.

Three kinds of fuses are used: blade type for lower amperage rating, cartridge type, and multi fuse for higher amperage ratings.

**WARNING - Fuse replacement**

- Never replace a fuse with anything but another fuse of the same rating.
- A higher capacity fuse could cause damage and possibly a fire.
- Never install a wire or aluminum foil instead of the proper fuse - even as a temporary repair. It may cause extensive wiring damage and a possible fire.

**CAUTION**

Do not use a screwdriver or any other metal object to remove fuses because it may cause a short circuit and damage the system.

**NOTICE**

The actual fuse/relay panel label may differ from equipped items.
CAUTION

- When replacing an open fuse or relay with a new one, make sure the new fuse or relay fits tightly into the clips. The incomplete fastening fuse or relay may cause the vehicle wiring and electric systems damage and a possible fire.
- Do not remove fuses, relays and terminals fastened with bolts or nuts. The fuses, relays and terminals may be fastened incompletely, and it may cause a possible fire. If fuses, relays and terminals fastened with bolts or nuts are open, consult with an authorized HYUNDAI dealer.
- Do not input any other objects except fuses or relays into fuse/relay terminals such as a driver or wiring. It may cause contact failure and system malfunction.

Inner panel fuse replacement

1. Turn the ignition switch and all other switches off.
2. Open the fuse panel cover.
3. Pull the suspected fuse straight out. Use the removal tool provided in the engine compartment fuse panel.
4. Check the removed fuse; replace it if it is blown.
5. Push in a new fuse of the same rating, and make sure it fits tightly in the clips.

If it fits loosely, consult an authorized HYUNDAI dealer.

If you do not have a spare, use a fuse of the same rating from a circuit you may not need for operating the vehicle, such as the cigar lighter fuse.
Maintenance

If the headlights or other electrical components do not work and the fuses are OK, check the fuse block in the engine compartment. If a fuse is blown, it must be replaced.

**Fuse switch**

Always, put the mode switch at the ON position.
If you move the switch to the OFF position, some items such as audio and digital clock must be reset and transmitter (or smart key) may not work properly.

**Engine compartment panel fuse replacement**

1. Turn the ignition switch and all other switches off.
2. Remove the fuse box cover by pressing the tab and pulling up.

⚠️ **CAUTION**

*Always place the fuse switch in the ON position while driving the vehicle.*
3. Check the removed fuse; replace it if it is blown. To remove or insert the fuse, use the fuse puller in the engine compartment fuse panel.

4. Push in a new fuse of the same rating, and make sure it fits tightly in the clips. If it fits loosely, consult an authorized HYUNDAI dealer.

**CAUTION**

*After checking the fuse box in the engine compartment, securely install the fuse box cover. If not, electrical failures may occur from water leaking in.*

---

**Multi fuse**

If the multi fuse is blown, it must be removed as follows:

1. Disconnect the negative battery cable.
2. Remove the bolts shown in the picture above.
3. Replace the fuse with a new one of the same rating.
4. Reinstall in the reverse order of removal.

**NOTICE**

If the multi fuse is blown, consult an Authorized HYUNDAI Dealer.
Fuse/Relay panel description

Inside the fuse/relay box covers, you can find the fuse/relay label describing fuse/relay name and capacity.

∗ NOTICE
Not all fuse panel descriptions in this manual may be applicable to your vehicle. It is accurate at the time of printing. When you inspect the fuse box on your vehicle, refer to the fuse box label.

LIGHT BULBS

**WARNING - Working on the lights**
Prior to working on the light, firmly apply the parking brake, ensure that the ignition switch is turned to the “LOCK” position and turn off the lights to avoid sudden movement of the vehicle and burning your fingers or receiving an electric shock.

Use only the bulbs of the specified wattage.

**CAUTION**
Be sure to replace the burned-out bulb with one of the same wattage rating. Otherwise, it may cause damage to the fuse or electric wiring system.

**CAUTION**
If you don’t have necessary tools, the correct bulbs and the expertise, consult an authorized HYUNDAI dealer. In many cases, it is difficult to replace vehicle light bulbs because other parts of the vehicle must be removed before you can get to the bulb. This is especially true if you have to remove the headlight assembly to get to the bulb(s). Removing/installing the headlight assembly can result in damage to the vehicle.

**NOTICE**
After heavy, driving rain or washing, headlamp and taillamp lenses could appear frosty. This condition is caused by the temperature difference between the lamp inside and outside. This is similar to the condensation on your windows inside your vehicle during the rain and doesn’t indicate a problem with your vehicle. If the water leaks into the lamp bulb circuitry, have the vehicle checked by an authorized HYUNDAI dealer.
Headlamp, Front position lamp, Front turn signal lamp, Front fog lamp bulb and Daytime running lamp replacement

(1) Headlamp (Low)
(2) Headlamp (High)
(3) Front turn signal lamp
(4) Position lamp (LED)
(5) Front side marker
(6) Front fog lamp (if equipped)
(7) Daytime running (DRL) lamp (LED) (if equipped)

WARNING - Halogen bulbs
- Halogen bulbs contain pressurized gas that will produce flying pieces of glass if broken.

(Continued)
- Always handle them carefully, and avoid scratches and abrasions. If the bulbs are lit, avoid contact with liquids. Never touch the glass with bare hands. Residual oil may cause the bulb to overheat and burst when lit. A bulb should be operated only when installed in a headlamp.
- If a bulb becomes damaged or cracked, replace it immediately and carefully dispose of it.
- Wear eye protection when changing a bulb. Allow the bulb to cool down before handling it.
1. Open the hood.
2. Remove the headlamp bulb cover by turning it counterclockwise.
3. Disconnect the headlamp bulb socket-connector.
4. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.
5. Remove the bulb by pulling it out.
6. Insert a new bulb by inserting it into the socket.
7. Install the socket in the assembly by aligning the tabs on the socket with the slots in the assembly. Push the socket into the assembly and turn the socket clockwise.
8. Install the headlamp bulb cover by turning it clockwise.

**NOTICE**
Always have the headlight aiming adjusted after an accident or the headlight assembly is reinstalled at an authorized HYUNDAI dealer.

---

**Turn signal lamp bulbs / Side marker lamp bulbs**

1. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.
2. Remove the bulb from the socket by pressing it in and rotating it counterclockwise until the tabs on the bulb align with the slots in the socket. Pull the bulb out of the socket.
3. Insert a new bulb by inserting it into the socket and rotating it until it locks into place.
4. Install the socket in the assembly by aligning the tabs on the socket with the slots in the assembly. Push the socket into the assembly and turn the socket clockwise.
Front fog lamp bulbs (if equipped)
1. Remove the front bumper under cover.
2. Reach your hand into the back of the front bumper.
3. Disconnect the power connector from the socket.
4. Remove the bulb-socket from the housing by turning the socket counter clockwise until the tabs on the socket align with the slots on the housing.
5. Install the new bulb-socket into the housing by aligning the tabs on the socket with the slots in the housing. Push the socket into the housing and turn the socket clockwise.
6. Connect the power connector to the socket.
7. Reinstall the front bumper under cover.

Headlamp (HID type), position lamp (LED) and daytime running (LED) lamp replacement

⚠️ WARNING - HID Headlamp low beam (if equipped)

Do not attempt to replace or inspect the low beam (XENON bulb) due to electric shock danger. If the low beam (XENON bulb) is not working, have your vehicle checked by an authorized HYUNDAI Dealer.

If the lamp does not operate, have the vehicle checked by an authorized HYUNDAI dealer.

✴ NOTICE

A skilled technician should check or repair the LED light. Otherwise, it may damage related parts.

✴ NOTICE

HID lamps have superior performance vs. halogen bulbs. HID lamps are estimated by the manufacturer to last twice as long or longer than halogen bulbs depending on their frequency of use. They will probably require replacement at some point in the life of the vehicle. Cycling the headlamps on and off more than typical use will shorten HID lamps life. HID lamps do not fail in the same manner as halogen incandescent lamps. If a headlamp goes out after a period of operation but will immediately relight when the headlamp switch is cycled it is likely the HID lamp needs to be replaced. HID lighting components are more complex than conventional halogen bulbs thus have higher replacement cost.
Maintenance

Side repeater lamp replacement

If the lamp does not operate, have the vehicle checked by an authorized HYUNDAI dealer.

*N NOTICE
A skilled technician should check or repair the side repeater lamp. Otherwise, it may damage related parts (ex. outside mirror).

Rear combination lamp bulb replacement

1. Open the liftgate (tailgate).
2. Remove the service cover using a flat-blade screwdriver.

(1) Stop and tail lamp
(2) Tail lamp
(3) Rear turn signal lamp
(4) Back-up lamp
(5) Rear side marker (LED)

Outside lamp

Service cover
3. Loosen the lamp assembly retaining please verify.

4. Remove the rear combination lamp assembly from the body of the vehicle.

5. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.

6. Remove the bulb from the socket by pressing it in and rotating it counterclockwise until the tabs on the bulb align with the slots in the socket. Pull the bulb out of the socket.

7. Insert a new bulb by inserting it into the socket and rotating it until it locks into place.

8. Install the socket in the assembly by aligning the tabs on the socket with the slots in the assembly. Push the socket into the assembly and turn the socket clockwise.

9. Reinstall the lamp assembly to the body of the vehicle.
Inside lamp

1. Open the liftgate (tailgate).
2. Remove the service cover using a flat-blade screwdriver.
3. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.
4. Remove the bulb from the socket by pressing it in and rotating it counterclockwise until the tabs on the bulb align with the slots in the socket. Pull the bulb out of the socket. (Back-up lamp: Remove the bulb from the socket by pulling it out)
5. Insert a new bulb by inserting it into the socket and rotating it until it locks into place.
6. Install the socket in the assembly by aligning the tabs on the socket with the slots in the assembly. Push the socket into the assembly and turn the socket clockwise.
7. Install the service cover by putting it into the service hole.
High mounted stop lamp replacement

1. Open the liftgate (tailgate).
2. Gently remove the center cover of the rear liftgate (tailgate) trim.
3. Disconnect the electrical connector.
4. Loosen the retaining nuts and remove the spoiler.
5. Remove the high mounted stop lamp assembly (A) after loosening the nuts and washer nozzle (B).
6. Reinstall a new lamp assembly in the reverse order of removal.
License plate lamp bulb replacement

1. Loosen the lens retaining screws with a screwdriver.
2. Remove the lens.
3. Remove the bulb.
4. Install a new bulb.
5. Reinstall the lens securely with the lens retaining screws.
Interior lamp bulb replacement

1. Using a flat-blade screwdriver, gently pry the lens from the interior lamp housing.
2. Remove the bulb by pulling it straight out.
3. Install a new bulb in the socket.
4. Align the lens tabs with the interior lamp housing notches and snap the lens into place.

**WARNING**
Prior to working on the Interior Lamps, ensure that the “OFF” button is depressed to avoid burning your fingers or receiving an electric shock.

**CAUTION**
Use care not to dirty or damage lens, lens tab, and plastic housings.

1. Using a flat-blade screwdriver, gently pry the lens from the interior lamp housing.
2. Remove the bulb by pulling it straight out.
3. Install a new bulb in the socket.
4. Align the lens tabs with the interior lamp housing notches and snap the lens into place.
APPEARANCE CARE

Exterior care

Exterior general caution
It is very important to follow the label directions when using any chemical cleaner or polish. Read all warning and caution statements that appear on the label.

High-pressure washing
- When using high-pressure washers, make sure to maintain sufficient distance from the vehicle. Insufficient clearance or excessive pressure can lead to component damage or water penetration.
- Do not spray the camera, sensors or its surrounding area directly with a high pressure washer. Shock applied from high pressure water may cause the device to not operate normally.
- Do not bring the nozzle tip close to boots (rubber or plastic covers) or connectors as they may be damaged if they come into contact with high pressure water.

Finish maintenance

Washing
To help protect your vehicle’s finish from rust and deterioration, wash it thoroughly and frequently at least once a month with lukewarm or cold water.
If you use your vehicle for off-road driving, you should wash it after each off-road trip. Pay special attention to the removal of any accumulation of salt, dirt, mud, and other foreign materials. Make sure the drain holes in the lower edges of the doors and rocker panels are kept clear and clean.
Insects, tar, tree sap, bird droppings, industrial pollution and similar deposits can damage your vehicle’s finish if not removed immediately. Even prompt washing with plain water may not completely remove all these deposits.
A mild soap, safe for use on painted surfaces, may be used.
After washing, rinse the vehicle thoroughly with lukewarm or cold water. Do not allow soap to dry on the finish.

⚠️ CAUTION
- Do not use strong soap, chemical detergents or hot water, and do not wash the vehicle in direct sunlight or when the body of the vehicle is warm.
- Be careful when washing the side windows of your vehicle. Especially, with high-pressure water, water may leak through the windows and wet the interior.
- To prevent damage to the plastic parts and lamps, do not clean with chemical solvents or strong detergents.

⚠️ WARNING - Wet brakes
After washing the vehicle, test the brakes while driving slowly to see if they have been affected by water. If braking performance is impaired, dry the brakes by applying them lightly while maintaining a slow forward speed.
Waxing
Wax the vehicle when water will no longer bead on the paint.
Always wash and dry the vehicle before waxing. Use a good quality liquid or paste wax, and follow the manufacturer’s instructions. Wax all metal trim to protect it and to maintain its luster.
Removing oil, tar, and similar materials with a spot remover will usually strip the wax from the finish. Be sure to re-wax these areas even if the rest of the vehicle does not yet need waxing.

⚠️ CAUTION

- Water washing in the engine compartment including high pressure water washing may cause the failure of electrical circuits located in the engine compartment.
- Never allow water or other liquids to come in contact with electrical/electronic components inside the vehicle as this may damage them.

⚠️ CAUTION

- Wiping dust or dirt off the body with a dry cloth will scratch the finish.
- Do not use steel wool, abrasive cleaners, or strong detergents containing highly alkaline or caustic agents on chrome-plated or anodized aluminum parts. This may result in damage to the protective coating and cause discoloration or paint deterioration.
**Finish damage repair**
Deep scratches or stone chips in the painted surface must be repaired promptly. Exposed metal will quickly rust and may develop into a major repair expense.

*NOTICE*
If your vehicle is damaged and requires any metal repair or replacement, be sure the body shop applies anti-corrosion materials to the parts repaired or replaced.

**Bright-metal maintenance**
- To remove road tar and insects, use a tar remover, not a scraper or other sharp object.
- To protect the surfaces of bright-metal parts from corrosion, apply a coating of wax or chrome preservative and rub to a high luster.
- During winter weather or in coastal areas, cover the bright metal parts with a heavier coating of wax or preservative. If necessary, coat the parts with non-corrosive petroleum jelly or other protective compound.

**Underbody maintenance**
Corrosive materials used for ice and snow removal and dust control may collect on the underbody. If these materials are not removed, accelerated rusting can occur on underbody parts such as the fuel lines, frame, floor pan and exhaust system, even though they have been treated with rust protection.
Thoroughly flush the vehicle underbody and wheel openings with lukewarm or cold water once a month, after off-road driving and at the end of each winter. Pay special attention to these areas because it is difficult to see all the mud and dirt. It will do more harm than good to wet down the road grime without removing it. The lower edges of doors, rocker panels, and frame members have drain holes that should not be allowed to clog with dirt; trapped water in these areas can cause rusting.
Aluminum wheel maintenance
The aluminum wheels are coated with a clear protective finish.
- Do not use any abrasive cleaner, polishing compound, solvent, or wire brushes on aluminum wheels. They may scratch or damage the finish.
- Clean the wheel when it has cooled.
- Use only a mild soap or neutral detergent, and rinse thoroughly with water. Also, be sure to clean the wheels after driving on salted roads. This helps prevent corrosion.
- Avoid washing the wheels with high-speed car wash brushes.
- Do not use any alkaline or acid detergent. It may damage and corrode the aluminum wheels coated with a clear protective finish.

Corrosion protection
Protecting your vehicle from corrosion
By using the most advanced design and construction practices to combat corrosion, we produce cars of the highest quality. However, this is only part of the job. To achieve the long-term corrosion resistance your vehicle can deliver, the owner's cooperation and assistance is also required.

Common causes of corrosion
The most common causes of corrosion on your vehicle are:
- Road salt, dirt and moisture that is allowed to accumulate underneath the car.
- Removal of paint or protective coatings by stones, gravel, abrasion or minor scrapes and dents which leave unprotected metal exposed to corrosion.

⚠️ WARNING
After washing the vehicle, test the brakes while driving slowly to see if they have been affected by water. If braking performance is impaired, dry the brakes by applying them lightly while maintaining a slow forward speed.
High-corrosion areas
If you live in an area where your car is regularly exposed to corrosive materials, corrosion protection is particularly important. Some of the common causes of accelerated corrosion are road salts, dust control chemicals, ocean air and industrial pollution.

Moisture breeds corrosion
Moisture creates an atmosphere that both promotes and facilitates corrosion. For example, corrosion is accelerated by high humidity, particularly when temperatures are just above freezing. In such conditions, the corrosive material is kept in contact with the car surfaces by moisture that is slow to evaporate.

Mud is particularly corrosive because it is slow to dry and holds moisture in contact with the vehicle. Although the mud appears to be dry, it can still retain the moisture and promote corrosion.

High temperatures can also accelerate corrosion of parts that are poorly ventilated against moisture dispersal. It is particularly important to keep your car clean and free of mud or accumulations of other materials. This applies not only to the visible surfaces but particularly to the underside of the car.

To help prevent corrosion
You can help prevent corrosion or drastically limit by observing the following:

Keep your car clean
The best way to prevent corrosion is to keep your car clean and free of corrosive materials. Attention to the underside of the car is particularly important.

- If you live in a high-corrosion area where road salts are used, near the ocean, areas with industrial pollution, or acid rain, etc., you should take extra care to prevent corrosion. In winter, spray or rinse the underside of your car at least once a month and be sure to clean the underside thoroughly when winter is over.

- When cleaning underneath the car, give particular attention to the components under the fenders and other areas that are hidden from view. Do a thorough job; just dampening the accumulated mud rather than washing it away will accelerate corrosion rather than prevent it. Water under high pressure and steam are particularly effective in removing accumulated mud and corrosive materials.
• When cleaning lower door panels, rocker panels and frame members, be sure that drain holes are kept open so that moisture can escape. If these areas are not kept clear, moisture could become trapped and accelerate corrosion.

Keep your garage dry
Don't park your car in a damp or poorly ventilated garage. This creates a favorable environment for corrosion. This is particularly true if you wash your car in the garage or drive it into the garage when it is still wet or covered with snow, ice or mud. Even a heated garage can contribute to corrosion unless it is well ventilated so moisture can dispersed.

Keep paint and trim in good condition
Scratches or chips in the finish should be covered with "touch-up" paint as soon as possible to reduce the possibility of corrosion. If bare metal is showing, the attention of a qualified body and paint shop is recommended.

Bird droppings: Bird droppings are highly corrosive and may damage painted surfaces in just a few hours. Always remove bird droppings as soon as possible.

Don't neglect the interior
Moisture can collect under the floor mats and carpeting to cause corrosion. Check under the mats periodically to be sure the carpeting is dry. Use particular care if you carry fertilizers, cleaning materials or chemicals in the car.
These should be carried only in proper containers and any spills or leaks should be cleaned up, flushed with clean water and thoroughly dried.

Interior care

Interior general precautions
Prevent caustic solutions such as perfume and cosmetic oil from contacting the dashboard because they may cause damage or discoloration. If they do contact the dashboard, clean immediately. See the instructions that follow for the proper way to clean vinyl.

⚠️ CAUTION
Never allow water or other liquids to come in contact with electrical/electronic components inside the vehicle as this may damage them.

⚠️ CAUTION
When cleaning leather products (steering wheel, seats etc.), use neutral detergents or low alcohol content solutions. If you use high alcohol content solutions or acid/alkaline detergents, the color of the leather may fade or the surface may get stripped off.
Cleaning the upholstery and interior trim

Vinyl
Remove dust and loose dirt from vinyl with a whisk broom or vacuum cleaner. Clean vinyl surfaces with a vinyl cleaner.

Fabric
Remove dust and loose dirt from fabric with a whisk broom or vacuum cleaner. Clean with a mild soap solution recommended for upholstery or carpets. Remove fresh spots immediately with a fabric spot cleaner. If fresh spots do not receive immediate attention, the fabric can be stained and its color can be affected. Also, its fire-resistant properties can be reduced if the material is not properly maintained.

Cleaning the lap/shoulder belt webbing
Clean the belt webbing with any mild soap solution recommended for cleaning upholstery or carpet. Follow the instructions provided with the soap. Do not bleach or re-dye the webbing because this may weaken it.

Cleaning the interior window glass
If the interior glass surfaces of the vehicle become fogged (that is, covered with an oily, greasy or waxy film), they should be cleaned with glass cleaner. Follow the directions on the glass cleaner container.

⚠️ CAUTION
Using anything but recommended cleaners and procedures may affect the fabric's appearance and fire-resistant properties.

⚠️ CAUTION
Do not scrape or scratch the inside of the rear window. This may result in damage to the rear window defroster grid.
EMISSION CONTROL SYSTEM

The emission control system of your vehicle is covered by a written limited warranty. Please see the warranty information contained in the Owner's Handbook & Warranty Information booklet in your vehicle.

Your vehicle is equipped with an emission control system to meet all emission regulations.

There are three emission control systems which are as follows.

1. Crankcase emission control system

Caution for the Inspection and Maintenance Test (With Electronic Stability Control (ESC) system)

- To prevent the vehicle from misfiring during dynamometer testing, turn the Electronic Stability Control (ESC) system off by pressing the ESC switch.
- After dynamometer testing is completed, turn the ESC system back on by pressing the ESC switch again.

2. Evaporative emission control system

3. Exhaust emission control system

In order to assure the proper function of the emission control systems, it is recommended that you have your car inspected and maintained by an authorized HYUNDAI dealer in accordance with the maintenance schedule in this manual.
2. Evaporative emission control (including ORVR: Onboard Refueling Vapor Recovery) system

The Evaporative Emission Control System is designed to prevent fuel vapors from escaping into the atmosphere.

(The ORVR system is designed to allow the vapors from the fuel tank to be loaded into a canister while refueling at the gas station, preventing the escape of fuel vapors into the atmosphere.)

Canister

Fuel vapors generated inside the fuel tank are absorbed and stored in the onboard canister. When the engine is running, the fuel vapors absorbed in the canister are drawn into the surge tank through the purge control solenoid valve.

Purge Control Solenoid Valve (PCSV)

The purge control solenoid valve is controlled by the Engine Control Module (ECM); when the engine coolant temperature is low during idling, the PCSV closes so that evaporated fuel is not taken into the engine. After the engine warms-up during ordinary driving, the PCSV opens to introduce evaporated fuel to the engine.

3. Exhaust emission control system

The Exhaust Emission Control System is a highly effective system which controls exhaust emissions while maintaining good vehicle performance.

Vehicle modifications

This vehicle should not be modified. Modification of your vehicle could affect its performance, safety or durability and may even violate governmental safety and emissions regulations.

In addition, damage or performance problems resulting from any modification may not be covered under warranty.

- If you use unauthorized electronic devices, it may cause the vehicle to operate abnormally, wire damage, battery discharge and fire. For your safety, do not use unauthorized electronic devices.
**Engine exhaust gas precautions (carbon monoxide)**

- Carbon monoxide can be present with other exhaust fumes. Therefore, if you smell exhaust fumes of any kind inside your vehicle, have it inspected and repaired immediately. If you ever suspect exhaust fumes are coming into your vehicle, drive it only with all the windows fully open. Have your vehicle checked and repaired immediately.

**CALIFORNIA PROPOSITION 65 WARNING**

\[ \text{Engine exhaust and a wide variety of automobile components and parts, including components found in the interior furnishings in a vehicle, contain or emit chemicals known to the State of California to cause cancer and birth defects and reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.} \]

**WARNING - Exhaust**

Engine exhaust gases contain carbon monoxide (CO). Though colorless and odorless, it is dangerous and could be lethal if inhaled. Follow the instructions on this page to avoid CO poisoning.

- Do not operate the engine in confined or closed areas (such as garages) any more than what is necessary to move the vehicle in or out of the area.
- When the vehicle is stopped in an open area for more than a short time with the engine running, adjust the ventilation system (as needed) to draw outside air into the vehicle.
- Never sit in a parked or stopped vehicle for any extended time with the engine running.
- When the engine stalls or fails to start, excessive attempts to restart the engine may cause damage to the emission control system.
Maintenance

Operating precautions for catalytic converters (if equipped)

Your vehicle is equipped with a catalytic converter emission control device. Therefore, the following precautions must be observed:

- Use only UNLEADED FUEL for gasoline engine.
- Do not operate the vehicle when there are signs of engine malfunction, such as misfire or a noticeable loss of performance.
- Do not misuse or abuse the engine. Examples of misuse are coasting with the ignition off and descending steep grades in gear with the ignition off.
- Do not operate the engine at high idle speed for extended periods (5 minutes or more).
- Do not modify or tamper with any part of the engine or emission control system. All inspections and adjustments must be made by an authorized HYUNDAI dealer.
- Avoid driving with an extremely low fuel level. Running out of fuel could cause the engine to misfire, damaging the catalytic converter.

WARNING - Fire

- A hot exhaust system can ignite flammable items under your vehicle. Do not park, idle, or drive the vehicle over or near flammable objects, such as grass, vegetation, paper, leaves, etc.
- The exhaust system and catalytic system are very hot while the engine is running or immediately after the engine is turned off. Keep away from the exhaust system and catalytic, you may get burned.
- Also, do not remove the heat sink around the exhaust system, do not seal the bottom of the vehicle or do not coat the vehicle for corrosion control. It may present a fire risk under certain conditions.

Failure to observe these precautions could result in damage to the catalytic converter and to your vehicle. Additionally, such actions could void your warranties.
CALIFORNIA PERCHLORATE NOTICE

Perchlorate Material-special handling may apply, See www.dtsc.ca.gov/hazardouswaste/perchlorate.

Notice to California Vehicle Dismantlers:
Perchlorate containing materials, such as air bag inflators, seatbelt pretensioners and keyless remote entry batteries, must be disposed of according to Title 22 California Code of Regulations Section 67384.10 (a).

<td>60</td>
</tr>
</tbody>
</table>

* NOTICE

- It is permissible to add 3 psi (20 kPa) to the standard tire pressure specification if colder temperatures are expected soon. Tires typically lose 1 psi (7 kPa) for every 12°F (7°C) temperature drop. If extreme temperature variations are expected, recheck your tire pressure as necessary to keep them properly inflated.
- An air pressure generally decreases, as you drive up to a high-altitude area above sea level. Thus, if you plan to drive a high-altitude area, check the tire pressures in advance. If necessary, inflate them to a proper level (Air inflation per altitude: +2.4 psi/1 mile (+10 kPa/1 km).

⚠ CAUTION

*When replacing tires, use the same size originally supplied with the vehicle.*
*Using tires of a different size can damage the related parts or make it work irregularly.*

RECOMMENDED LUBRICANTS AND CAPACITIES

To help achieve proper engine and powertrain performance and durability, use only lubricants of the proper quality. The correct lubricants also help promote engine efficiency that results in improved fuel economy. These lubricants and fluids are recommended for use in your vehicle.

<table>

</tbody>
</table>
*1 Refer to the recommended SAE viscosity numbers on the next page.

*2 Engine oils labeled Energy Conserving Oil are now available. Along with other additional benefits, they contribute to fuel economy by reducing the amount of fuel necessary to overcome engine friction. Often, these improvements are difficult to measure in everyday driving, but in a year's time, they can offer significant cost and energy savings.

*3 If the API service SM engine oil is not available in your state, you are able to use API service SL.

</tbody>
</table>
Recommended SAE viscosity number

⚠️ CAUTION
Always be sure to clean the area around any filler plug, drain plug, or dipstick before checking or draining any lubricant. This is especially important in dusty or sandy areas and when the vehicle is used on unpaved roads. Cleaning the plug and dipstick areas will prevent dirt and grit from entering the engine and other mechanisms that could be damaged.

Engine oil viscosity (thickness) has an effect on fuel economy and cold weather operating (engine start and engine oil flowability). Lower viscosity engine oils can provide better fuel economy and cold weather performance, however, higher viscosity engine oils are required for satisfactory lubrication in hot weather. Using oils of any viscosity other than those recommended could result in engine damage.

When choosing an oil, consider the range of temperature your vehicle will be operated in before the next oil change. Proceed to select the recommended oil viscosity from the chart.

<table>
<thead>
<tr>
<th>Temperature Range for SAE Viscosity Numbers</th>

</thead>
<tbody>
<tr>
<td>Temperature</td>
</tr>
<tr>
<td>Theta ll 2.0 T-GDI</td>
</tr>
<tr>
<td>Theta ll 2.4 GDI</td>
</tr>
</tbody>
</table>

*: For better fuel economy, it is recommended to use the engine oil of a viscosity grade SAE 5W-30 (API SM / ILSAC GF-4). However, if the engine oil is not available in your state, select the proper engine oil using the engine oil viscosity chart.
The vehicle identification number (VIN) is the number used in registering your vehicle and in all legal matters pertaining to its ownership, etc. The number is punched on the engine compartment bulkhead.

The VIN is also on a plate attached to the top of the dashboard. The number on the plate can easily be seen through the windshield from outside.

The vehicle certification label attached on the driver's side center pillar gives the vehicle identification number (VIN).
The tires supplied on your new vehicle are chosen to provide the best performance for normal driving. The tire label located on the driver’s side center pillar gives the tire pressures recommended for your vehicle.

The engine number is stamped on the engine block as shown in the drawing.

The refrigerant label is located at the front of the engine room. The label contains the following information:
- Type of refrigerant
- Amount of refrigerant
CONSUMER INFORMATION

This consumer information has been prepared in accordance with regulations issued by the National Highway Traffic Safety Administration of the U.S. Department of Transportation. Your Hyundai dealer will help answer any questions you may have as you read this information.

Hyundai motor vehicles are designed and manufactured to meet or exceed all applicable safety standards.

For your safety, however, we strongly urge you to read and follow all directions in this Owner's Manual, particularly the information under the headings "NOTICE", "CAUTION" and "WARNING".

If, after reading this manual, you have any questions regarding the operation of your vehicle, please contact your nearest Hyundai Motor America Regional Office as listed in the following:

**Eastern Region: Connecticut, Delaware, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.**
- Eastern Region
  - 1122 Cranbury South River Road
  - Jamesburg, NJ 08831
  - (800) 633-5151

**Southern Region: Florida, Georgia, North Carolina, South Carolina, Virginia, and West Virginia.**
- Southern Region
  - 3025 Chastain Meadows Parkway
  - suite 100 Marietta, GA 30066
  - (800) 633-5151

**South Central Region: Alabama, Arkansas, Louisiana, Mississippi, New Mexico, Oklahoma, Tennessee, Texas.**
- South Central Region
  - 1421 South Beltline Road,

REPORTING SAFETY DEFECTS
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying HYUNDAI MOTOR AMERICA. If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or HYUNDAI MOTOR AMERICA.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to: Administrator, NHTSA, 1200 New Jersey Avenue, SE., West Building Washington, DC 20590. You can also obtain other information about motor vehicle safety from http://www.safercar.gov.
